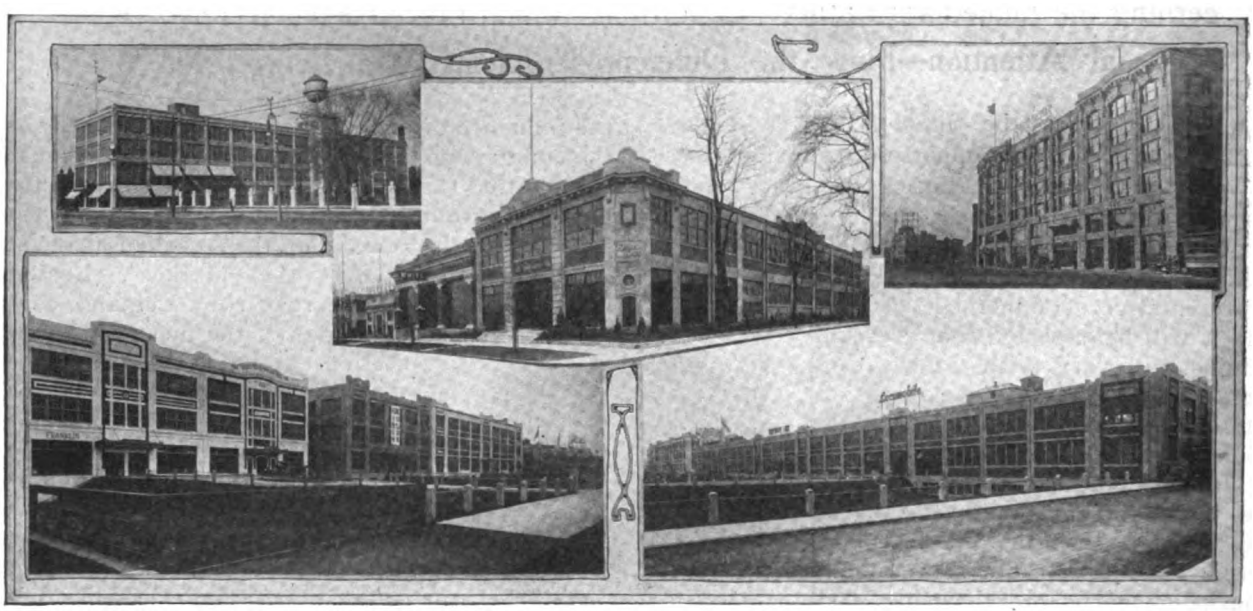
In connection with these systems, which vary according to the ideas of the individual sales managers, for there does not appear to have been any conference between them upon the subject, it may be added that there has been no disposi-



Glimpses of Boston's New Automobile Row on Commonwealth Avenue: Upper Left, Packard Plant; Upper Centre, Group of Buildings Near Allston Line; Upper Right, Square at Beacon Street; Lower Views Present Both Ends of the Long Block of Buildings Near the Beacon Street Corner.

The second hand car problem, which is one of the most serious confronting the dealers in New York, enters very largely into this situation. Some dealers maintain that from 80 to 90 per cent. of their sales involve the used car. A large majority hold that it is absolutely impossible to do business without trading. A few declare that they positively will not trade, and practically all of these avoid the necessity for this practise, by maintaining a used car department as a separate institution, by which the second hand machine is sold for the customer without charge.

Solving Second Hand Problem.

It is the question of allowance on the old machine which enters so largely into that of salesmanship. It is beginning to be realized that the man who enters a salesroom with a second hand car proposition often is a much better salesman than the man with whom he seeks to do business. Apparently, it is the temptation to make a sale tion to dispense with the services of salesmen unless it has been found that it was entirely impossible to train them to fit into the new order of things. On the contrary it has been deemed advisable to retain the men who are familiar with the product and assist them to realize the efficiency desired. To this end weekly meetings are held, at which specific details of the business are discussed from every aspect.

Shopping a Distinctive Feature.

There also has arisen a disposition to eliminate overhead expenses so far as this may be practical. By this is meant that wherever it is possible to secure a suitable location at a cheaper rent, this has been done. Palatial establishments—Tiffany fronts as they are termed by New York dealers—are rapidly becoming a thing of the past. In considering this phase of the situation, it must be added that the custom of shopping for automobiles probably applies more largely in the

Digitized by Google

Metropolis than in any other city in the country. This is due in part to the large transient population, as well as to the habit of those who may be regarded as residents of the city or its suburbs. A general estimate, by the dealers themselves, indicates that 75 to 80 per cent. of the prospects are secured in this manner. It readily will be appreciated that the question of location is important, but, at the other hand, the dealers have found that as a class, purchasers of automobiles with whom they come in contact are keen to appreciate the matter of overhead expenses and their effect upon the price which they must pay for the car of their choice.

The Garage Difficulty.

One other condition enters very largely into the situation—the absence of satisfactory garage accommodations. This should not be taken to mean that the garages in New York are not carefully managed, but they do not afford the desired opportunity for the man who feels he must work upon his own machine. Of course the possibilities for maintaining a private garage are limited, and there is held to be great need for some form of substitute. The dealers are now engaged upon the consideration of a plan for the establishment of a co-operative garage, in which none but those who work upon their own cars will be permitted to house their machines. It is expected that this will result in the ability to interest many men who have not previously owned cars, because they did not feel able to employ the services of a chauffeur or to pay for the ordinary care and maintenance which can be bestowed upon the machine by its owner.

Situation in Boston.

Some of these conditions apply as well to the dealers in Boston, although in an entirely different manner. The same spirit of optimism is manifest in that city, and for much the same reasons. Boston dealers also have been reorganizing their sales departments, although they have not carried the systematic study of the proposition to the same length. Perhaps it might be held that it is not necessary, but it cannot be contended that anything which will make for closer supervision of details is unworthy of thoughtful consideration.

The second hand problem is by no means so prominent in Boston, despite its importance. The percentage of sales in which this question arises is far below that expressed by the New York dealers. The same conditions apply as to the manner in which it is being met. That is, there are some dealers who are willing to trade, others who accept only cars of the same make as that carried by the house, and still others—a comparative few—who will not trade. The last named avoid the proposition in the same manner as those in New York—by selling the car in a separate used car department without charge to the customer.

Canvassing Methods Necessary.

There is almost no shopping for cars in Boston. Instead, each agent is compelled to adopt every available method of securing new prospects. With many it has become necessary to consider plans bordering very closely upon those of the canvasser. The salesman is therefore called upon to take advantage of every opportunity to present the merits of his car, and, in the case of a busy business man, he must be able to so formulate his statement that he is able to interest his prospect to the point of securing a demonstration in the very few minutes allowed to him. Because of this situation some dealers have thought of the advisability of securing limited display space in a small store, say at the lower end of Washington street, where it would be possible for business men to drop in during the lunch hour. It cannot be said, however, that this propositon has been given anything like serious consideration.

The New Automobile Row.

Heretofore, Boston's Automobile Row has been located along Boylston street, from Copley square and Massachusetts avenue, and on the latter street, both sides of Boylston street. Now Boston has a new Automobile Row, extending for a distance of practically two miles, along Commonwealth avenue, from Beacon street to Brighton avenue, the latter being over the Allston line. It should not be understood that there is one continuous line of buildings from one point to the other. There is a group of buildings at the Beacon street corner; another, about a quarter-mile long, a short distance further up the street; a third half a mile distant, and still another at the Brighton street corner.

Especially Designed Buildings.

In some respects this Automobile Row is unlike any other in the world. Each of the buildings was designed and constructed solely for automobile purposes. Many of them are small factories in themselves. This feature is alone sufficient indication of the wonderful growth of the industry of New England's business centre. In practically every instance the salesroom and service station have been combined, and generally this has been from the desire to reduce the rent expense.

If the same conditions prevailed, with respect to shopping, as in New York, it would be impossible for the Boston dealers to thus abandon their old locations nearer the business district. And it should not be understood that all dealers have abandoned Boylston street or Massachusetts avenue. Some have erected large service stations in that section of the city.

Reducing Overhead Expense.

In both Boston and New York there has been a tendency toward the reduction of overhead expense, and the reorganization of sales methods. The dealers in both cities regard the immediate future as possessing greater promise than the past. This is largely due in both instances to the feeling that they are better able to cope with existing conditions and that they will receive the co-operation of their clientele in building up a business that shall be permanent and satisfactory from every viewpoint, both to the dealer and customer.

WILL SELL REO DIRECT.

Maker Severs Connection with R. M. Owen & Co., and Takes Over Sales Organization.

Announcement is made that the Reo Motor Car Company, Lansing, Mich., will market the Reo car direct in the future, the selling arrangement with R. M. Owen & Co., New York City, having been discontinued. It is explained, however, that the change is not quite as radical as might be assumed from the foregoing statement, inasmuch as it is added that the entire sales organization of the Owen concern is to be taken over by the Reo company and continued in charge of R. C. Rueschaw as head of the sales department.

In connection with the above report, it is added that R. M. Owen has severed his connection with the Reo Motor Car Company, of which he was vice president. Mr. Owen, and R. E. Olds, the designer of the Reo car, have been associated in a business way since the days of the curved dash Oldsmobile, when Mr. Olds was at the head of the Olds Motor Works. When the latter retired from the Olds Motor Works to form the Reo Motor Car Company, Mr. Owen assumed the responsibility of marketing the product of the new concern.

CHANGES SELLING PLANS.

Peerless Motor Car Company Disposes of Its Branches in New York and Chicago.

Announcement is made by the Peerless Motor Car Company, Cleveland, O., maker of Peerless cars and trucks, that, in order to reduce the overhead expense incident to using a large building exclusively for the sale of one line, an arrangement has been made whereby the C. T. Silver Motor Company in New York and the McDuffee Automobile Company in Chicago will take over the entire business and equipment of the Peerless branches in those cities. It is understood that the men connected with the branches in each city will become identified with the new agencies.

E. J. Klaus, general manager of sales for the Peerless company, explains that it is the aim of the company in taking this step to readjust the proportions between selling and manufacturing expense in Peerless cars. He adds that because of the high quality and necessarily high price the sale of this line is naturally somewhat limited, and when the cost of operating and maintaining a large sales and service building in a desirable location falls on those sales it is a very considerable item, but it is felt that if many other cars are sold with the same equipment the overhead cost is much reduced.

The new arrangement will afford the buyer an opportunity to select from a larger stock of automobiles the one most desirable for his purpose, as each of the companies will carry in stock gasoline cars of lower price, and the Chicago house also has a line of electrics. It is pointed out that conditions have changed in the motor car business, and it is believed by the Peerless company that this plan is a step in the right direction and one which will be copied by others.

CANFIELD PATENT IS VALID.

A. R. Mosler & Co. Obtains Injunction Prohibiting Sale of Infringements.

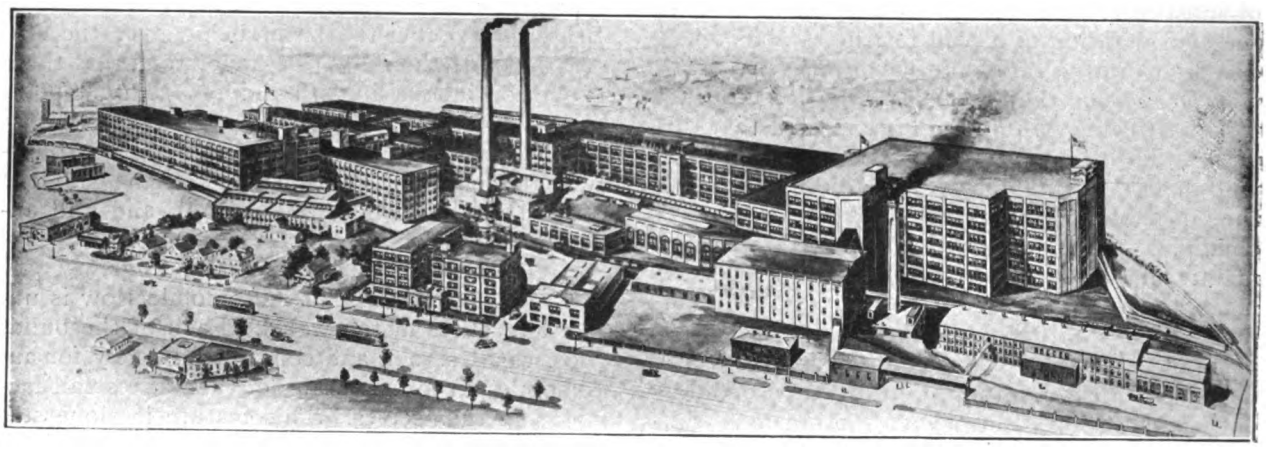
A decision by the United States district court of appeals in New York City, made by Judge Lacombe and concurred in by Judge Ward and Judge Rogers, in the suit of A. R. Mosler & Co., against John Lurie, maintains that the Canfield patent, owned by the complainant, is valid and the defendant is enjoined from selling the six different makes of spark plugs named in the bill of complaint. A. R. Mosler, president of A. R. Mosler & Co., states that the policy of his company will be broad and unselfish, but the co-operation of every legitimate spark plug manufacturer is expected. On the other hand, the rights of the company under the recent decision will be vigorously protected.

The licensees under the Canfield patent now include the following: Jeffery-DeWitt Company, Detroit; Champion Spark Plug Company, Toledo, O.; C. A. Mezger, Inc., New York City; Rajah Auto Supply Company, Bloomfield, N. J.; Hartford Machine Screw Company, Hartford, Conn.; Benford Manufacturing Company, Mount Vernon, N. Y.; Silvex Company, New York City; Frontier Specialty Company, Buffalo, N. Y.; New York Mica & Manufacturing Company, Auburn, N. Y.; Emil Grossman Manufacturing Company, Brooklyn, N. Y.; Auburn Ignition Company, Auburn, N. Y.; Splitdorf Electrical Company, Newark, N. J.; Standard Company, Torrington, Conn., and Bosch Magneto Company, New York City.

GOODYEAR RUBBER FACTORY.

Said to Be One of the Largest and Most Modern Plants of Its Kind in the World.

Herewith is presented the latest picture of one of the largest and most modern rubber factories in the world—that of the Goodyear Tire & Rubber Company, Akron, O. The complete plant covers 50 acres, and has a floor space of 1,550,605 square feet, or 35 acres. It gives employment to 6500 people. The power plant has a turbo-generator capacity of 8500 horsepower, steam boiler capacity of 12,000 horsepower and an engine capacity of 7250 horsepower.



General View of the Entire Plant of the Goodyear Tire & Rubber Company, Akron, O.

It is possible for this Goodyear factory to produce 10,000 automobile tires a day, in addition to the immense quantity of motor truck, motorcycle, bicycle and carriage tires that are regularly turned out. The mechanical rubber goods department, which was started less than a year ago, is growing rapidly, and the products of this department—such as belting, hose, packing, etc.—are fast becoming recognized throughout the trade as equal in quality to the other goods manufactured by the Goodyear company.

FORD'S ANNUAL REPORT.

Officials of the Company Make Public Statement of Financial Condition.

The Ford Motor Company, Detroit, Mich., maker of Ford cars, has made public its annual statement of its financial condition at the close of the fiscal year, Sept. 30, as follows:

Assets—	1913	1912
Real estate and machinery	$10,669,968	$5,815,787
Merchandise	9,183,370	6,387,541
Cash and debts receivable	15,180,581	8,226,842
Total	$35,033,919	$20,430,171
Liabilities—		
Capital stock	$2,000,000	$2,000,000
Accounts payable	4,774,746	2,136,507
Floating debt	.....	1,426,297
Surplus and profit and loss	28,259,173	.....
Surplus	.....	14,867,366
Total	$35,033,919	$20,430,171

SECURES BIG CONTRACT.

Continental Motor Manufacturing Company to Produce 10,000 Engines for Saxon Cars.

The Continental Motor Manufacturing Company of Detroit and Muskegon, Mich., announces that it has been awarded the contract to produce 10,000 small four-cylinder motors for the Saxon Motor Company, Detroit, the organization of which to produce a light car was announced recently. These engines will be manufactured in the Muskegon plant, which is particularly well adapted for handling four-cylinder motors in large quantities.

The new motor is of the water-cooled type, with bore of 2.625 inches and stroke of four, giving an S. A. E. rating of 11 horsepower, although it will develop 14.7 horsepower on brake test at 2000 revolutions a minute. This will give a ratio of approximately one horsepower to each 50 pounds, as against a minimum of one horsepower to 75 for the larger cars. All material and workmanship entering into its manufacture will be strictly up to the Continental standard in every respect.

POPE PROPERTY IS APPRAISED.

Report Filed with Superior Court in Connecticut Shows Assets of $2,034,899.90.

The appraisers appointed to inventory the property of the Pope Manufacturing Company, Hartford, Conn., now in the hands of Col. George Pope, as receiver, have filed their report with the clerk of the superior court for Hartford county. It is explained that the inventory on raw materials and supplies, finished parts, etc., was cut exactly in half, while, with respect to the accounts receivable, it is explained that there are on the books 797 outstanding claims, aggregating $224,519, but as some are old and doubtful, these have been deducted. The appraisal follows:

Land on Capitol avenue	$84,750.00
Buildings on this property	634,375.00
West works lot	47,200.00
Buildings on this property	62,800.00
Equipment at main plant	107,000.00
Machinery for manufacturing	369,877.71
Standard small tools	46,822.00
Patterns for automobile parts	2,600.00
Main office furniture, etc	3,500.00
Equipment of West works	14,875.50
Machinery, tools, etc	11,795.50
Fifty-five second hand cars	40,000.00
Forty-three cars in process	81,300.00
Raw material, finished parts, etc	331,542.85
Accounts collectible	181,461.34
Total	$2,034,899.90

SILENT AMERICAN MOTOR.

Company Bearing That Name Is Organized in Toledo for Experimental Work on New Engine.

A number of men prominent in the automobile industry in Toledo, O., have organized the Silent American Motor Company, with initial capital of $10,000. Among those interested are the following: President, Charles Turner of the Morton Truck Company; vice president, Thomas J. Kehoe, Kinsey Manufacturing Company; secretary, J. R. Ford, Ford Realty Company; treasurer, J. W. Hawk, Kinsey Manufacturing Company; general manager, S. F. Sawyer; directors, the above and S. L. Kelly, Electric Auto-Lite Company, and B. C. Gamble, Gamble Motor Car Company.

It is understood that the original capital will supply the necessary finances for experimental work on a new type of patented noiseless automobile engine. If these tests should bear out the claims of the inventor, as is expected, the capital will be increased to $300,000.

EMPLOYEES SHARE IN PROFITS.

King Motor Car Company Makes Christmas Presents Equal to One-Tenth of Salary.

Employees of the King Motor Car Company, Detroit, maker of the King car, were very pleasantly surprised Dec. 20, when each received, as a Christmas present, a check amounting to one-tenth of his salary as his share of this year's profits. This gift was in fulfillment of the policy adopted by the officers and stockholders, who believe that all those engaged in the production of King cars should share in its success.

At noon the employees were assembled in one of the large rooms of the factory, where one of the officers made the presentation, announcing that the company had passed through an unusually successful year and was now shipping 10 cars a day. The rapid development of the business was one of the surprises of the year. After the checks had been distributed a lunch was served to all.

ADDS CARTER CARBURETOR.

H. W. Johns-Manville Company Will Act as Selling Agent for This Make in the Future.

The Carter Carburetor Company, St. Louis, Mo., maker of the Carter multiple-jet carburetor, announces that it has entered into an agreement with the H. W. Johns-Manville Company, New York City, whereby the latter concern acquires the exclusive sale of all models of this product. Vice President Hugh H. C. Weed of the Carter company has become manager of the carburetor department of the New York concern.

The many branches of the H. W. Johns-Manville Company throughout the country afford it an exceptional opportunity to represent the manufacturer in this manner, and the Carter carburetor is still another addition to the long list of automobile accessories, the sale of which it has acquired during the past few weeks.

R-C-H BID IS CONFIRMED.

Reported That Business Will Finally Be Disposed of as a Going Concern.

At a hearing Dec. 20, Lee Joslyn, referee in bankruptcy, confirmed the guaranteed bid of $295,000, made by the Todd-Frank-Friedeberg Company, for the assets of the R-C-H Corporation of Detroit. Creditors presented an offer for $300,000, but the referee explained that the increase was not sufficient to warrant his reopening the bids.

It is understood that an attempt will be made to dispose of the plant as a going concern, and that the company may be reorganized. It is the intention of the purchaser to utilize all the parts now in stock for the production of cars, during which time an effort will be made to interest eastern capital. Through these methods, and by the liquidation of the real estate, it is expected that a substantial sum will be netted for the creditors.

WAVERLEY HAS GOOD YEAR.

Annual Report Shows Surplus and Undivided Profits Aggregating $950,000.

The report of the Waverley Company, Indianapolis, Ind., maker of Waverley electric cars and trucks, issued to the stockholders, shows that the business for the past year has been very satisfying. The gross business for the year was $1,312,815.94 on a capital of $190,000. The surplus and undivided profits for the period amounted to $950,000.

The officers and directors elected at the annual meeting are: President, William B. Cooley; vice president, Herbert H. Rice; secretary, Wilbur C. Johnson; treasurer, William Kothe; directors, Hugh Daugherty, Joseph C. Schaf, Alexander C. Ayres, Hugh M. Love.

REMOVES TO DOWNINGTOWN.

Rowe Motor Manufacturing Company Leaves Its Rented Building in Coatesville, Penn.

The Rowe Motor Manufacturing Company, formerly of Coatesville, Penn., has removed to Downingtown, same state, where it has purchased 14 acres of land and buildings, which are being improved to meet the requirements of the company. The concern manufactures Rowe motor trucks, and has been occupying rented quarters in Coatesville for some little time.

President Samuel J. Rowe states that the plant will be first class and thoroughly modern in every respect, and that the location is far superior to the old one for handling the rapidly increasing business of the company.

STUDEBAKER HEAD RETIRES.

Clarence H. Booth Resigns as General Manager of Studebaker Corporation.

Frederick S. Fish, president of the Studebaker Corporation, Detroit and South Bend, Ind., announces the retirement of Clarence H. Booth, who was general manager of the automobile division of that concern. It is understood that Mr. Booth will leave early in the new year for an extended trip abroad, after which he will devote his time to other interests.

ANNOUNCES ELECTRIC BRAKE.

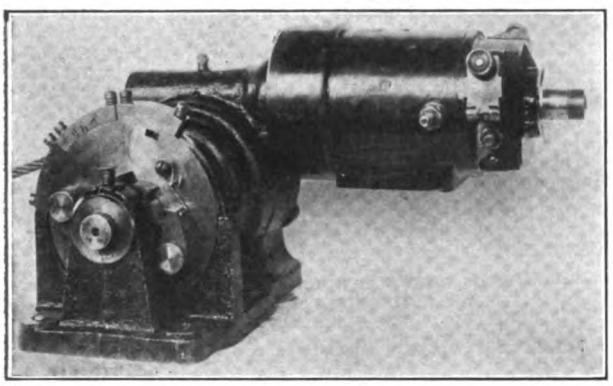
E. V. Hartford of Hartford Suspension Company Carries Electric Equipment One Step Further.

E. V. Hartford of the Hartford Suspension Company, Jersey City, N. J., has made public the details of the E. V. Hartford electric brake, which he states is the result of three years of study and experimentation. The device is manually controlled, the hand controller being so mounted under the steering wheel that it can be operated by the driver without removing the hands from the wheel. It is stated that the lever may be actuated to obtain any desired friction effect and that a pressure several times that possible with ordinary methods is obtainable.

The system comprises a small, high speed electric motor mounted on a suitable base, bolted to the frame and preferably under the rear seat. A non-reversible worm on the end of the armature shaft actuates a spiral gear mounted on a shaft carried transversely to the motor shaft. This transverse shaft carries a steel drum upon which a steel cable is wound, one end of the cable being secured to the drum, while the other is connected with the emergency brake lever. The cable, in other words, replaces the usual rod connecting the brake lever with the equalizer or brake rods.

Between the drum and the worm gear drive, inside of the case enclosing the mechanism, is an adjustable friction clutch which provides sufficient pressure to transmit the maximum braking efficiency. Beyond a certain point, however, the clutch will slip. This eliminates undesirable stresses upon the cable, etc., preventing breakage.

Upon a slight movement of the control lever forward, the electric motor is energized and movement imparted to the drum, winding the cable, etc. By a maximum



Hartford Electric Brake, Comprising Drum Actuated by Electric Motor, and Controlled by Lever Under Steering Wheel—It Is Stated That Any Desired Braking Effect Can Be Obtained with Movement of Finger.

movement of the control lever the brakes may be locked instantly. It is claimed that as nice a braking effect may be obtained as by manual application. Two releases are provided, one being progressive, similar to the braking effect obtained on the first contact, and the other a full release, which acts instantly.

Current for operating the device is obtained from the storage battery of the lighting and starting system, and the braking motor is wound for six, 12 or 24-volt batteries. It is stated that the controller may be operated by one finger; that it may be installed so as to be used by both the driver and occupants of the rear seats, and that the friction clutch may be adjusted to any predetermined pressure. It is also held that the clutch prevents excessive stresses being placed upon the braking mechanism.

EDISON BATTERY DISPLAY.

Special Attention Will Be Drawn to the New A-5 Type for Vehicle Service.

The Edison Storage Battery Company, Orange, N. J., will exhibit the Edison alkaline nickel-iron storage battery for ignition, lighting and traction, at the forthcoming New York show. During the past year a new size has been added to the line of vehicle batteries, to which special attention will be drawn. This is known as the A-5, having a rated capacity of 187.5 ampere-hours. It is intermediate between the A-4 (150 ampere-hours) and the A-6 (225 ampere-hours), and is used in passenger vehicles, in 1000-pound delivery wagons, in baggage, freight and industrial trucks and for other services where the A-6 would be more than ample. Batteries for ignition and lighting of gasoline cars will be shown in two capacities, 40 and 80 ampere-hours. They are made up in 6.5-volt sets, assembled in steel boxes or wooden trays.

The Fall River Chauffeurs' Association, Fall River, Mass., held its second annual ball earlier in the month, at which some 200 couples took part in the grand march, which was led by Frank O'Neil and Miss Hazel Springer in an electric runabout. Music hall, which was the scene of the festivities, was beautifully decorated to present a Japanese setting, with Japanese lanterns, flowers and American flags. The event was in charge of the following: Floor director, Frank Halligan; assistant, M. Edward Vera; aids, Arthur C. Springer, Eugene J. Pontiff, Stanley Mott and Harry P. Kenshaw. The officers of the association are: President, Patrick J. Halligan; vice president, Emile J. Fisher; treasurer, Frank O'Neil; secretary, James Cooney; recording secretary, Arthur C. Springer; sergeant-at-arms, Arthur Prevost; trustees, M. Edward Vera, Charles St. George and Patrick O'Brien.

Francis R. Hoyt, Cleveland, O., consulting engineer, has removed his offices from that city to Staunton, Va., in order to be in intimate touch with the early production of the Falcon cyclecar, of which he is designer. The Falcon Cyclecar Company is now erecting machinery in its new plant at Staunton and expects to be under quantity production by Feb. 15.

DIVIDENDS DECLARED.

F. B. Stearns Company, Cleveland, O.; 10 per cent.

Peerless Motor Car Company, Cleveland, O.; quarterly, one per cent., preferred, payable Jan. 1.

Hendee Manufacturing Company, Springfield, Mass.; quarterly, 1½ per cent., preferred, payable Jan. 1.

Westinghouse Electric & Manufacturing Company, East Pittsburg, Penn.; quarterly, one per cent., common, payable Jan. 31; quarterly, 1¾ per cent., preferred, payable Jan. 15.

American-La France Fire Engine Company, Elmira, N. Y.; quarterly, 1¾ per cent., preferred, payable Jan. 2.

Chalmers Motor Company, Detroit; quarterly, 1¾ per cent., preferred, payable Jan. 2; quarterly, 2½ per cent., common, payable Jan. 2.

Gray & Davis, Boston, Mass.; quarterly, 1¾ per cent., preferred, payable Jan. 1.

Goodyear Tire & Rubber Company, Akron, O.; quarterly, 1¾ per cent., preferred, payable Jan. 1.

Texas Company, New York City; quarterly, 1¾ per cent., payable Dec. 31.

B. F. Goodrich Company, Akron, O.; quarterly, 1¾ per cent., preferred, payable Jan. 1.

J. I. Case Threshing Machine Company, Racine, Wis.; quarterly, 1¾ per cent., preferred, transfer certificates, payable Jan. 1.

National Carbon Company, Cleveland, O.; quarterly, 1½ per cent., payable Jan. 15.

Batavia Rubber Company, Batavia, N. Y.; quarterly, one per cent., and one-half extra, common, payable Jan. 1; quarterly, 1½ per cent., preferred, payable Jan. 1.

Willys-Overland Company, Toledo, O.; quarterly, 1¾ per cent., preferred, payable Jan. 2.

BUSINESS DIFFICULTIES.

Atlantic Vehicle Company, Newark, N. J. Receivers will sell office furniture, etc., at 539 Broadway, New York City, Jan. 5, at 10:30 in the morning.

Planhard Manufacturing Company, Kokomo, Ind. Receiver will sell all personal property at the factory, Dec. 30, at 10 in the morning.

Thomas W. Burr, Newton, Mass., repairman, has been petitioned into bankruptcy. Liabilities given as $1805; assets, $900.

Codman Square Garage, Dorchester, Mass., has assigned for the benefit of creditors to William L. Pullen.

Disco Company, Detroit, has been declared a bankrupt by Judge Tuttle. Security Trust Company, Detroit, is receiver.

Blue Hill Avenue Garage, Boston, Mass., has assigned for the benefit of creditors to William E. Ludden.

Northern Motor Car Company, Albany, N. Y., has filed a petition in bankruptcy, with liabilities reported at $9000 and assets at $2000.

Wahl Motor Car Company, Detroit. Judge Tuttle has dismissed the proceedings in bankruptcy and lifted the receivership. All creditors have declared they are satisfied the firm is solvent and should be permitted to resume management of its own affairs.

The United Auto Supply Company, New York City, has been petitioned into bankruptcy and F. H. Bangs has been appointed receiver. Liabilities are said to be $15,000 and assets $1000.

The American Marion Sales Company, New York City, distributor of automobiles at 1896 Broadway; creditors have filed a petition in bankruptcy.

TRADE INFORMATION EXCHANGE.

The Following Requests for Information, Presented by Members of the Trade Information Exchange, Offer Opportunities for Agents to Secure New Lines, for Manufacturers to Extend Their Representation and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. They Are Published Without Name or Address, Those Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for Forwarding.

Through the Trade Information Exchange, The Accessory and Garage Journal is in a position to supply at request a number of the best pleasure car and power wagon agency propositions that can be secured. These agency openings are for machines of all kinds, makes and prices. When writing, state preference, prices and full details concerning that which is desired. All correspondence will be treated as confidential. No charge will be made for the service rendered.

PLEASURE CAR AGENCIES WANTED.

9703—Tennessee House is interested in securing the agency for pleasure cars selling between $500 and $5000.

9705—New York Concern would represent a line of pleasure cars selling between $500 and $2300.

9706—Virginia Dealer seeks the agency for cars selling between $900 and $1500.

9714—Missouri House would consider an agency proposition involving cars selling between $500 and $3000.

9718—New Jersey Company is in the market to represent pleasure car lines selling between $1000 and $3000.

9727—New York Dealer seeks the agency for cars selling between $1050 and $1300.

9715—Pennsylvania Firm would take the agency for cars listing between $400 and $1500.

9720—Illinois House would represent makers of pleasure cars listing between $800 and $3000.

9724—Texas Concern is interested in the agency for pleasure cars selling between $500 and $2000.

9731—Minnesota House would consider an agency proposition for cars listing between $400 and $1500.

9734—Iowa Company seeks connection with a manufacturer of pleasure cars selling between $500 and $2000.

9739—Connecticut Dealer would add a line of cars selling anywhere between $350 and $5000.

9746—Utah House is in the market to represent a line of pleasure cars listing between $700 and $2500.

9747—Indiana Firm would consider an agency for pleasure cars selling between $750 and $2500.

COMMERCIAL CAR AGENCIES WANTED.

5464—Pennsylvania Dealer is interested in securing the agency for power wagons listing at $800 to $1500.

5439—Connecticut Concern would consider an agency proposition for power wagons selling between $500 and $5000.

5468—New Jersey House is in the market to represent manufacturers of commercial vehicles selling at $900 to $2000.

5478—Indiana Dealer is open for an agency proposition involving power wagons selling between $200 and $5000.

5472—Illinois House would take the agency for commercial vehicles selling between $700 and $3500.

5479—Minnesota Firm is in the market for an agency for commercial vehicles listing between $350 and $800.

5484—Missouri Concern wants agency for commercial vehicles selling between $1500 and $2000.

5487—Tennessee Firm is anxious to secure the agency for power wagons selling at $750 to $2500.

CYCLECAR AGENCIES WANTED.

1712—California Dealer would take the agency for some good cyclecar.

ACCESSORY AGENCIES WANTED.

7512—Ohio Concern is in the market to represent any satisfactory line of automobile accessories, equipment or supplies.

7524—Connecticut House is interested in securing the agency for pleasure car and power wagon accessories, equipment and supplies.

7531—California Garage would handle a line of pleasure car accessories and supplies.

7534—Utah Company seeks an opportunity to handle good selling line of pleasure car accessories, supplies and fittings.

7544—Iowa House is interested in handling a line of pleasure car accessories and supplies.

7548—Texas Company will take exclusive distributing proposition for anything that is good in the line of pleasure car equipment, accessories and supplies.

7551—Illinois Dealer wants agency for pleasure car accessories and supplies.

7560—New Jersey Concern will consider an agency proposition for a good line of pleasure car accessories and supplies.

7561—Iowa Dealer is seeking the agency for pleasure car accessories and supplies.

7567—Minnesota Company is interested in a line of automobile accessories and supplies.

7570—Pennsylvania House will take agency for all kinds of automobile accessories and supplies.

7575—New York Dealer wants agency for automobile accessories and supplies.

7578—Wisconsin Concern, recently incorporated, is interested in all lines of automobile accessories.

7581—New Hampshire House is seeking the agency for the latest improved accessories for gasoline cars, as well as pleasure car supplies of all kinds.

7584—Missouri Dealer wants agency for automobile accessories and supplies.

7587—Tennessee Concern is in the market for all kinds of pleasure car and power wagon accessories and supplies.

7590—New York House desires the agency for automobile equipment, accessories and supplies.

7593—Virginia Dealer is in the market for automobile accessories and supplies.

GARAGE EQUIPMENT WANTED.

8618—New Jersey House is in the market for garage supplies.

8621—Illinois Concern seeks information respecting garage equipment and supplies.

8630—Texas Company is desirous of securing garage supplies.

8631—New York Concern is in need of garage equipment and supplies.

8633—Missouri Dealer seeks information concerning garage equipment and supplies.

8637—New York House is in the market for garage equipment.

8639—Pennsylvania Firm is interested in garage supplies of all kinds.

8641—Minnesota Concern seeks information relative to garage equipment and supplies.

8643—Iowa House is in the market for garage equipment and supplies.

8644—Tennessee Firm is interested in garage equipment and supplies.

8645—Utah Company wants information relative to garage equipment and supplies.

8647—Iowa Concern requests information relative to garage supplies.

8650—California House is in the market for garage supplies.

8651—Connecticut Garage will consider the purchase of garage equipment and supplies.

8654—Ohio Dealer is considering the purchase of garage equipment and supplies.

REPAIR SHOP AND MACHINE TOOLS.

6301—Pennsylvania Concern is in the market for machine tools of all kinds.

6302—New York House seeks information relative to machine tools.

6305—Iowa Garage is in the market for an alternating current electric drill.

6309—California Garage will purchase repair shop supplies.

6311—Iowa Company seeks information relative to repair shop supplies and equipment, including machine tools.

6313—Minnesota House is in the market for repair shop supplies and machine tools.

6315—Utah Concern is ready to purchase repair shop supplies.

6318—Tennessee House wants information respecting machine tools and repair shop equipment and supplies.

6319—Connecticut Garage is ready to consider the purchase of repair shop supplies and equipment, including machine tools.

6321—Virginia Dealer wants information relative to repair shop supplies.

6343—New York Company seeks information relative to repair shop supplies and machine tools.

6345—Texas House is in the market for repair shop supplies and equipment, including machine tools.

AGENCY TERRITORY OPEN.

2100—Texas Concern wants sub-agents all over the state.

2101—New York Company is anxious to place sub-agents for the Crow Elk-Hart line.

2104—Tennessee House has territory open throughout Tennessee, northern Alabama, northern Mississippi and southern Kentucky.

SPECIAL OPPORTUNITIES.

1814—Alabama Man wants tires and accessories of all kinds particularly adaptable for a Hudson 33, five-passenger touring car, 1912 model, as well as parts.

GENERAL NEWS OF THE MANUFACTURERS.

The McFarlan Motor Company, Connersville, Ind., has announced that its six-cylinder model will carry the Gray pneumatic gearshifting and engine starting system as standard equipment. So far as is known this is the first motor car manufacturer to adopt this innovation.

The Hupp Motor Car Company, Detroit, has increased its capital stock from $750,000 to $1,000,000, the increase representing a 33.3 per cent. stock dividend taken from the surplus.

The Grant Motor Car Company, Detroit, organized some months ago to produce a small car, has purchased the factory of the Findlay Motor Company at Findlay, O. The plant has floor space of some 50,000 square feet, sufficient to warrant plans for the production of 5000 cars a year.

The Electric Renovator Manufacturing Company, Pittsburg, Penn., has purchased the Harroun Company, Indianapolis, Ind., maker of the kerosene carburetor, invented by Ray Harroun. The factory will remain in Indianapolis for the present, and will be operated in conjunction with the Pittsburg plant.

The H. W. Johns-Manville Company, New York City, has purchased all manufacturing and selling rights for the Long horn, formerly made by the G. Piel Company, Long Island City, N. Y.

The Empire Automobile Company, Indianapolis, Ind., is occupying its new headquarters at Capital avenue and Michigan street, shown in an accompanying illustration. The building is of concrete and steel, three stories in height, and will house the service and parts stock departments as well as the various executives.

New Headquarters and Executive Offices of the Empire Automobile Company in Indianapolis, Ind.

The Muncie Gear Company, Muncie, Ind., has arranged to continue business under new management. Thomas W. Warner of Toledo, O., becomes president and the capital stock is increased from $300,000 to $500,000. It is understood that creditors of the company will receive both cash and preferred stock, and that about $230,000 of the stock has been distributed in this manner. The other officers are: Vice president, Dr. W. A. Spurgeon; secretary and treasurer, J. Roy Goethus.

The Kissell Motor Car Company, Hartford, Wis., announces that early in January it will place in the market two entirely new KisselKars, one a four and the other a six. Both will be sold at a reduced price, as compared with previous KisselKars, and the six is to be marketed for less than $2000.

The Edison Storage Battery Company, Orange, N. J., has completed its new plant, and only awaits the installation of new machinery before removing thereto. Sales Manager R. A. Bachman denies a rumor that a new type of Edison battery is soon to make its appearance, and explains that this may have arisen from the fact that the company is soon to market a new type of miner's lamp, for which the Edison nickel-iron battery is particularly well adapted.

The Maccarr Automobile Company, Allentown, Penn., is planning to remove its factory to Scranton, Penn., locating in the old Cliff works building.

The Westinghouse Air Spring Company, Pittsburg, Penn., maker of a new air spring for automobiles, has opened factory branches at 244 West 48th street, New York City; 98 Massachusetts avenue, Boston, Mass.; 380 Elliott street, Cleveland, O., and other cities.

The Meteor Motor Car Company, Shelbyville, Ind., is planning to remove its factory to Piqua, O., and reincorporate under the laws of Ohio with capital of $50,000.

Phineas Jones & Co., Newark, N. J., will locate a branch factory for the production of automobile wheels on South Los Angeles street, Los Angeles, Cal., and will incorporate in that state under the name of Phineas Jones & Co. of California. Latest machinery will be installed.

The Saxon Motor Company, Detroit, has placed an order with the Continental Motor Manufacturing Company of that city and Muskegon, Mich., for 10,000 four-cylinder motors to be used in its new light Saxon car. The engines will be produced in the factory at Muskegon.

The Black Manufacturing Company, Milford, Mich., has sold its plant to the Detroit Auto Sash Company, and the building is to be remodelled to meet the requirements of the purchaser.

The White Company, Cleveland, O., is erecting an addition to its plant in that city at a cost of $10,000.

The Cox Brass Manufacturing Company, Albany, N. Y., has opened a factory branch at 1216 Van Ness avenue, San Francisco, Cal., where a complete line of its products will be carried. The branch is under the charge of Charles M. Weaver as manager.

The H. H. Babcock Company, Watertown, N. Y., announces that it has withdrawn entirely from the manufacture of automobiles.

The Lord Motor Car Company of Los Angeles and Pasadena, Cal., through its president, P. A. Lord, writes that there is absolutely nothing in the rumor that it is preparing to locate an automobile plant in Los Angeles.

The Woods Mobilette Company, Chicago, Ill., maker of a cyclecar bearing that name, plans to erect an assembling plant in the East and another in the West, if business conditions prove to be such as to warrant such action.

The Invader Oil Company, New York City, announces that it has concluded arrangements with the Electric Appliance Company, New Orleans, La., to handle its complete line of Invader oils and greases, and I-O-C gear oils for the territory embracing Louisiana, Mississippi, the southern part of Alabama, the western coast of Florida and a small part of Arkansas and Georgia.

The Frontier Specialty Company, 728 Main street, Buffalo, N. Y., is issuing a patent warning to the trade, calling attention to the fact that it has secured the control of all rights under letters patent No. 642,167, granted Jan. 30, 1900, to F. R. Simms, for spark plugs for explosive engines. It is maintained that this patent covers the construction of the All-in-One spark plug, made by this concern.

The Emil Grossman Manufacturing Company, Bush Terminal, Brooklyn, N. Y., has secured a license to manufacture Red Head spark plugs under patents No. 642,167, granted to Simms, Jan. 30, 1900, and No. 915,896, to Shea, March 23, 1909.

The Chevrolet Motor Company, Flint, Mich., has erected a branch factory in New York City, where assembling work will be undertaken, as well as the preparation of cars for exportation.

Digitized by Google

The Weed Chain Tire Grip Company, New York City, has purchased the rights for the Lyons grips, designed for use on motor trucks.

The Green & Swett Company, Boston, Mass., has been organized for the production of the Tri-Phoon tire pump. The factory will be located in that city.

The General Vehicle Company, Long Island City, N. Y., maker of G. V. electric and G. V. Mercedes gasoline trucks, has removed to its new five-story factory. The new building is one of four which are to be erected by the company, and when these are finished the concern will have one of the largest motor truck plants in the country.

The Universal Winding Company, Cranston, R. I., has asked for tax exemption for 10 years, and if the request is granted, it plans to utilize the old Maxwell-Briscoe Motor Company's plant in that city.

The Moore Motor Truck Company, formerly of Philadelphia, has leased the Mineral Products Company's building at Buttonwood and C streets, Wilmington, Del., and it is understood that Moore trucks will be constructed therein.

The Dirigible Headlight Company, Salt Lake City, Utah, recently incorporated with capital of $10,000, has acquired a factory site at 325 South West Temple street, and it is expected that manufacturing will be begun with about 50 men in the near future. The officers of the company are: President, Charles Dale; vice president, L. P. Amtoft; treasurer, E. R. Madsen; secretary, Frank Dale.

The Bridgeport Automobile Company, Bridgeport, W. Va., has begun the erection of a building on the site of the old Crystal glass works, in which it will manufacture automobiles, airships, motor boats and parts. It is understood that a large eastern motor car company is to be united with this concern in the near future. J. Bernard Handlan of Wheeling, W. Va., is at the head of the Bridgeport company.

William F. Duhimeier, Cincinnati, O., has purchased the former plant of the Schacht Motor Car Company in that city, and it is stated that J. F. Dietz & Co., maker of desks, etc., will occupy at least a portion of the factory.

The Ford Motor Company, Detroit, has purchased a plot of ground on Third street, Louisville, Ky., where it will erect a branch assembling plant at an approximate cost of $200,000.

The Firestone Tire & Rubber Company, Akron, O., is erecting a branch and service station building in Seattle, Wash., which will have a floor area of more than 20,000 square feet.

The H. E. Wilcox Motor Car Company, Minneapolis, Minn., maker of Wilcox trucks, has increased its capital to $3,500,000. The factory will be enlarged and improved.

The L. P. C. Motor Company, recently formed in Racine Junction, Wis., has elected the following officers: President, Capt. William Mitchell Lewis; vice president and engineer, Rene M. Petard; secretary and sales manager, James M. Cram; treasurer, F. S. Cordon; general counsel, E. B. Hand; superintendent, O. R. Delamater; purchasing agent, C. B. Chamberlain.

The H. W. Johns-Manville Company, New York City, has removed its Toronto branch to 19 Front street, East, where it will have a store and warehouse with floor area of approximately 35,000 square feet. A larger stock of J-M automobile specialties and the other products manufactured by this concern will be carried than heretofore was possible.

The Chase Motor Truck Company, Syracuse, N. Y., has placed on the market a kerosene motor roller farm tractor, designed for the severe condition of soil and topography existing throughout the eastern United States. This tractor furnishes all traction and belt work required by the farmer.

The Detroit Wagon Works, Detroit, is making a new type tractor, which will be announced soon.

The Detroit Steering Wheel & Windshield Company, Detroit, has changed its name to the Metalwood Manufacturing Company. The change affects the name only.

The Monahan Vehicle Company, Providence, R. I., has installed in its painting department a new compressed vapor cleaning system for cleaning cars before painting.

The Dudley Tool Company, Menominee, Mich., will produce a cyclecar along conventional lines with seats arranged tandem style.

The Lee Tire & Rubber Company, Conshohocken, Penn., has placed agencies for its tires with the Lee Tires Sales Company, Newark, N. J., and the Lee Tire & Rubber Company, Brooklyn, N. Y.

The Pullman Motor Car Company is making arrangements for the establishment of an agency in Boston, Mass.

The Briggs-Detroiter Company, Detroit, maker of the Detroiter cars, will be represented in New York State, New Jersey and all of New England, by a new company that has been formed under the name of the Detroiter Motor Sales Company. Julius Lichtenstein is head of the new company.

The Lord Motor Car Company is to establish a new automobile plant at Los Angeles, Cal.

The Front Wheel Drive Company, Hoboken, N. J., maker of Christie automobile fire trucks, contemplates establishing its plant in Erie, Penn.

The Champion Spark Plug Company, Toledo, O., is now operating in its new four-story addition. The building gives the company 40,000 square feet more of floor space and increases the minimum capacity to 75,000 a year.

The Dayton-Dick Company, Quincy, Ill., maker of the "Da-Lite" generator and ignition and the Dayton-Dick starter, has moved into a new factory that affords ample floor space of 80,000 square feet. This plant is equipped with the latest design of machinery in all departments.

The Firestone Tire & Rubber Company, Akron, O., has established a service station at Des Moines, Ia. A building has been secured on Walnut street and machinery for repairing wheels and tires will be installed.

The Allyne Brass Foundry, Detroit, has awarded a contract for the erection of a one-story addition, 30 by 47 feet, to its plant on Crawford avenue.

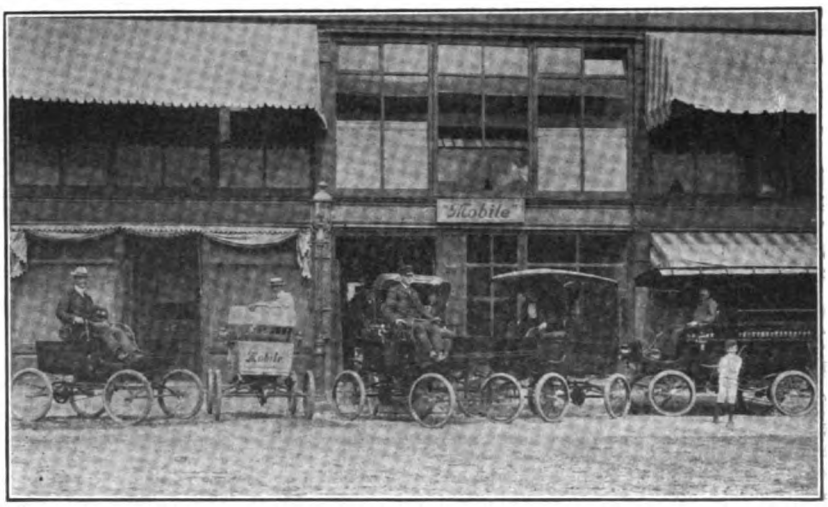
The Oregon Top Company, Portland, Ore., has moved to larger quarters on East Eighth street.

The Motor & Manufacturing Company, Dunkirk, N. Y., has erected a new plant on East Second street.

The Flyer Automobile Company is to erect a plant in Mt. Clemens, Mich.

The Gibson Motor Car Company, Pittsburg, Penn., has purchased a building at Monaca and will remodel it for the manufacture of automobiles.

The General Motors Company, Detroit, has declared a semi-annual dividend of 3.5 per cent. on the preferred stock.



The First Salesroom in America Devoted Exclusively to the Exploitation of Automobiles—The Mobile Factory Branch, Opened at 346 Boylston Street, Boston, in the Fall of 1898.

The Goodyear Tire & Rubber Company, Akron, O., has declared a dividend of 12 per cent. on the common stock.

The Merchant & Evans Company, Philadelphia, Penn., is said to be about ready to place the Devon two-wheel tractor on the market. This is a front drive machine in which the power plant is mounted directly on the front axle.

The Empire Tire Company and the Empire Rubber Company, both of Trenton, N. J., have filed notice of their dissolution. This action was necessary because of the merging of the two concerns under the name of the Empire Tire & Rubber Company.

The Packard Motor Car Company, Detroit, announces that the sales of Packard pleasure cars increased 22.6 per cent. between Aug. 1 and Nov. 1, over those of the same period in 1912.

The Parish & Bingham Company, Cleveland, O., maker of steel stampings and automobile frames, has filed notice of an increase in capital from $244,000 to $1,000,000.

The Poughkeepsie Utilities Corporation, Poughkeepsie, N. Y., is said to have closed a deal for a factory in Milwaukee, Wis., where it is expected that the production of automobile rims will be begun in the near future.

H. B. Willower has gone to Tacoma, Wash., as assistant manager of the Northwest branch of the Gramm-Bernstein Company, Lima, O., maker of B. A. Gramm's trucks. He later will have charge of the branch in Seattle, Wash.

The Hoover-Parsons Spring Co., Fresno, Cal., has opened a factory at 823 Merced street for the production of springs, etc.

The Lenox Motor Car Company, Boston, Mass., is now located in new quarters at 18 Columbus avenue.

The Portage Rubber Company has moved its Cleveland, O., branch to larger quarters at 1816 Euclid avenue.

The Southern California Tire Works, San Diego, Cal., formerly located at 1210 Third street, has moved to a new location at Second and B streets.

The Cincinnati Automobile Company, Cincinnati, O., will remove to its new building at 114 West Court street, which was erected at a cost of $72,000.

Drennen & Co., Birmingham, Ala., has moved into new quarters at the corner of Avenue C and 21st street.

The Bantam Anti-Friction Company, Bantam, Conn., has moved its Detroit headquarters to 525 Dime Savings Bank building. John W. Hill will continue in charge.

The Chicago Grant Motor Company, Chicago, Ill., has opened salesrooms at 2021 Michigan avenue.

The Auto Exhibit & Supply Company, San Francisco, Cal., has moved into the quarters recently vacated by the Howard Automobile Company.

A. F. Nelson, Benson, Minn., has opened his new garage, which was recently erected at Kansas and Pacific avenues. The building is 126 by 50 feet.

The Franklin Motor Car Company, Rochester, N. Y., has opened new salesrooms and garage at 298-300 East avenue.

The Ford Auto Garage Company, Middleport, O., has moved to its new repair shop located on Third street in that city.

The Automobile Tire Company, New York City, has opened a branch at 14th and L streets, N. W., Washington, D. C.

S. E. Knaupp, owner of the West End garage, Somerset, Penn., has leased the fireproof garage building heretofore operated by the Central Auto Company, and will remove to that location.

The Hahn Motor Truck & Wagon Company, recently incorporated in Reading, Penn., has opened a plant on South Fourth street, where it will conduct the business of repairing and rebuilding automobiles, etc.

J. M. Deatrich, Wilkesbarre, Penn., is about ready to occupy his new fireproof garage at 178 South Washington street.

The General Auto Repair Company, Cincinnati, O., has leased quarters near the Reading road in Avondale and will locate there.

The Frank O. Ronstrom Company, San Francisco, Cal., distributor for Regal and Kline-Kar lines, will remove in the near future to new quarters on Van Ness avenue.

The Siebrands-Falken Auto Company, Sioux City, S. D., has leased a building on North Phillip avenue and will locate there.

The Howard Automobile Company, Los Angeles, Cal., Pacific Coast distributor for Buick cars, will remove to new quarters at 1328 South Flower street.

W. W. Whitten, Providence, R. I., has removed to larger quarters on Washington street. He handles several well known makes of cars.

John Garris, New York City, has leased the building at 538 West 49th street for use as a garage.

The Gray Motor Company, Newark, N. J., has leased the building at 229 Halsey street.

The International Motor Company, Philadelphia, Penn., has removed from 635 North Broad street to larger quarters at 23rd and Chestnut streets.

The Motors Owners Supply Company, Columbus, O., will remove shortly to North Third street.

The McAlpine Company, Cincinnati, O., has leased a building on Elsinore street and will remove to that location.

The Overland Sales Company, Toledo, O., is now located in its new building on 22nd street.

The Eureka Sales Company, Indianapolis, Ind., formerly at 332 North Illinois street, has removed to its new home at 237 East Ohio street.

Fred J. Barr, Davenport, Ia., dealer in Flying Merkel and Harley-Davidson motorcycles, has removed to 125 East Third street.

The Seventeenth Street Garage Company, Parkersburg, W. Va., is occupying its new building, where it will handle King cars in addition to its other lines.

The Goodyear Tire & Rubber Company, New England branch, Boston, Mass., has taken possession of its new building on Brookline avenue, a short distance from the corner of Beacon street and Commonwealth avenue.

The Capitol Garage Company, Montpelier, Vt., has removed to larger quarters on Court street, back of the Pavilion hotel.

The Paige Motor Car Company and the Chandler Motor Car Company, Boston, Mass., which are virtually the

Interior of White Pleasure Car and Truck Salesroom in Boston.

same concern with the same officers in each, have removed from the Fenway garage on Ipswich street to the show rooms formerly occupied by the M. B. M. Motor Company, 1118 Boylston street.

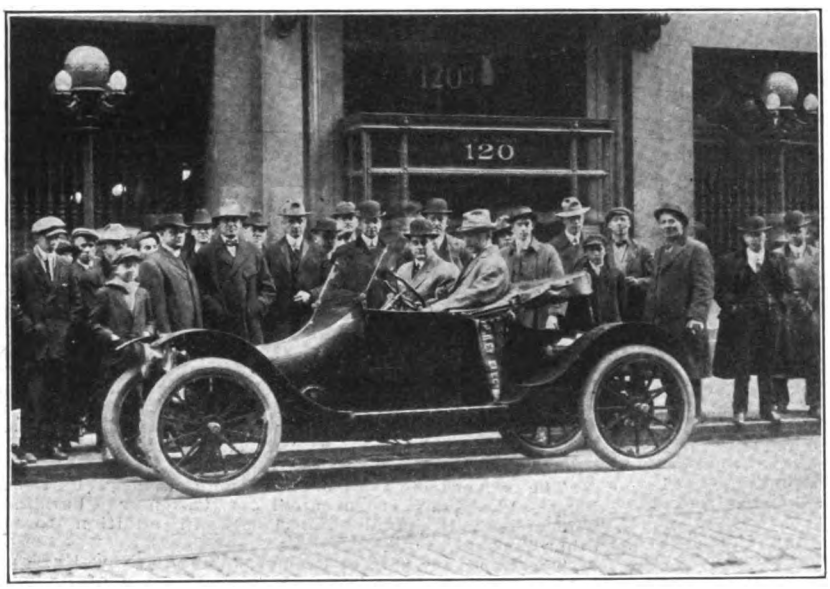
RECENTLY ANNOUNCED 1914 MODELS.

Lozier—Lozier Motor Company, Detroit. New series six-cylinder model and a new four. Four-cylinder motor, L head type, cast en bloc, with bore of 4.25 inches and stroke of 6.5. Enclosed valves, easily accessible. Cooling, centrifugal pump, lubrication, pressure feed; ignition, Bosch high-tension magneto. Unit power plant. Multiple disc clutch. Selective transmission, four speeds forward and reverse. Full floating rear axle. Front springs, semi-elliptic; rear, Lozier platform. Left hand drive, centre control with ball type lever. Wheelbase, 120 inches; tread, 56. Tires, 36 by 4.5 inches. Equipment includes: One-man top, Kellogg four-cylinder tire pump, Gray & Davis electric lighting and starting system, electric headlight dimmers, etc. Six-cylinder chassis is a continuation of last season's model with the addition of refinements, and with the same equipment as the four. Two body designs on the four; seven-passenger touring car, convertible into five-passenger by disappearing seats folding into back of front seat, and two-passenger roadster.

De Soto—De Soto Motor Car Company, Auburn, Ind. De Soto Six. Motor, six cylinders cast in pairs with bore of four inches and stroke of five. Lubrication, positive pump and level splash; cooling, centrifugal pump; ignition, lighting unit; carburetor, Schebler. Clutch, multiple disc, Raybestos lined. Transmission, selective, three speeds forward and reverse. Full floating rear axle. Front springs, semi-elliptic; rear, three-quarter elliptic. Wheelbase, 130 inches. Tires, 35 by four inches. Equipment includes: Electric lighting, pneumatic starter, top, curtains, windshield, either electric or exhaust horn, etc. Body seats five, with provision for two extra seats.



Col. E. W. M. Bailey Leaving Boston in the Bailey Electric Roadster on His Recent Boston-Chicago Trip.

Paterson—W. A. Paterson Company, Flint, Mich. Models 32 and 33. One chassis, two-passenger roadster and five-passenger touring car. Motor, four-cylinder, L head; bore 3.5 inches, stroke five. Lubrication, constant level splash; cooling, centrifugal pump. Unit power plant. Cone clutch. Selective transmission, three forward speeds and reverse. Front springs, semi-elliptic; rear, three-quarter elliptic. Wheelbase, 112 inches. Tires, 32 by 3.5 inches. Equipment includes: Top with envelope, windshield, electric lighting and starting, electric horn, demountable rims, etc.

Haynes—Haynes Automobile Company, Kokomo, Ind. Three enclosed body designs added to regular line, previously announced; two coupes and a limousine, the product of the Biddle & Smart Company, Amesbury, Mass. Limousine is a seven-passenger body with oval type full aluminum roof, dipped in front, extremely wide doors, sashless windows and upholstered in broadcloth of French design and manufacture. Fitted to six-cylinder chassis with 136-inch wheelbase. Coupes also are distinctive in design and treatment, and are fitted to four-cylinder chassis with 118-inch wheelbase and six-cylinder chassis with 130-inch wheelbase.

Chandler—Chandler Motor Car Company, Cleveland, O. Light weight six. Motor with cylinders cast in blocks of three; L head type; bore 3.375 inches, stroke five. Lubrication, force feed and splash; cooling, centrifugal pump; ignition, Bosch high-tension magneto; carburetor, Stromberg double-jet type. Multiple disc clutch. Three-speed, selective transmission. Tires, 36 by four inches, on Firestone demountable rims. Equipment includes: Westinghouse electric lighting and starting system, top, Jiffy curtains, Blair top holders, windshield, etc. Five-passenger touring, two-passenger roadster, five-passenger limousine, five-passenger sedan and three-passenger coupe bodies.

Waverley Electric—Waverley Company, Indianapolis, Ind. Models 104, 105, 106, 107 and 108; front-drive four, rear-drive four, brougham, four-chair brougham and limousine-five. Motors, 80-volt Waverley. Batteries, 42 cells, 11 or 13 plate, standard; Edison or Ironclad-Exide, extra. Tires, 34 by four-inch forward, 34 by 4.5 rear. Chassis continued with all standard Waverley features. Model 106 gives owner option of front or rear drive. In model 107 each passenger is provided with a separate Pullman chair, three of which take the place of the usual rear seat running the full width of the car, that in the centre being slightly back of the other two. Model 108 is distinctly new. Three passengers are accommodated on the rear seat, while the driver not only has an individual seat, but also a separate door for entering or leaving the car. All seats face forward.

Locomobile—Locomobile Company of America, Bridgeport, Conn. Four six-cylinder models, which are really only two, rated at 38 and 48 horsepower respectively, each fitted with right and left hand drive and known as 38LD, 38RD, 48LD and 48 RD. Four-cylinder chassis has been dropped. Chassis show few changes, except in the left hand drive models, which have been altered to conform to the new placing of the operator. Improved carburetor design and new body lines. Gray & Davis electric system continued. Addition of six-cylinder air compressor.

Austin—Austin Automobile Company, Grand Rapids, Mich. Model 55. Motor, six-cylinder, T head type, cast in blocks of threes, replaces L head of last season. Exhaust on right, inlet on left. Bore four inches, stroke 5.5. Lubrication, force feed and splash; ignition, Bosch magneto. Two-speed rear axle retained. Left hand drive, centre control. Remy two-unit starting and lighting system, with LBA battery. Seven-passenger body, with disappearing seats, and with rear seat wide enough to hold four with comfort, it is maintained. Line also includes: Model 66, with motor of 4.5-inch bore and 5.5-inch stroke and model 77, with motor of 4.5-inch bore and seven-inch stroke. Both are six-cylinder engines and the construction is practically the same as model 55.

Fal—Fal Motor Car Company, Chicago, Ill. Greyhound model. New roadster, designed to be converted readily into a sleeping car if desired. Motor is a Buda, four-cylinder, en bloc, 4.25 inch bore, 5.5-inch stroke. Chassis design is standard throughout. By pushing the seat cushion forward upon the floorboards there is exposed sufficient room in the rear deck to admit a six-foot person, whose head is supposed to rest on the seat cushion. Body design is streamline throughout, and a feature is the installation of a single headlight in the centre of the hood extension, the radiator being about four inches behind the light.

Bailey Electric—S. R. Bailey & Co., Inc., Amesbury, Mass. Roadster. Continued from last season. Motor, specially designed General Electric. Battery, 60 cells Edison A-5. Mileage, 75 to 100. Speed, standard maximum, 25 miles an hour. Motor is connected to countershaft by Morse silent chain, final drive by double roller chain. Wheelbase, 112 inches. Tires, special electric pneumatic, 33 by four inches, on quick detachable rims. This is the type of car utilized by Col. E. W. M. Bailey on his recent Boston-Chicago tour. Company is also producing a special four-passenger roadster or touring car.

Arbenz—Arbenz Car Company, Chillicothe, O. Models show no radical changes, except such as to make for increased efficiency and ease of operation. Electric lighting and starting system, with dimming arrangement for headlights. Electric horn mounted under the hood. Fuel tank in cowl dash. Improved carburetor. Larger rear axle of full floating type. Heavier wheels, fitted with quick detachable, demountable rims carrying 36 by four-inch tires. Spare rim. Wire wheels optional.

Vaughan—Vaughan Car Company, Inc., Kingston, N. Y. One six-cylinder chassis and five body styles; roadster, four-passenger, touring, limousine and convertible inside drive. Motor, L head type, six cylinders cast en bloc with bore of 3.75 inches and stroke of 5.25. Lubrication, force feed and splash; ignition, Mea magneto; carburetor, Rayfield model D. Multiple disc clutch, Ray-

Digitized by Google

bestos lined. Four-speed transmission. Rear springs, floating cantilever type, resembling three-quarter elliptic in appearance. Wheelbase, 138 inches. Tires, 35 by four inches. Equipment includes: Bijur electric lighting and starting system with LBA storage battery, Waltham clock in centre of steering wheel, etc. Wire wheels optional.

Lambert—Buckeye Manufacturing Company, Anderson, Ind. Models 46 and 60, series C. Innovation is found in the choice of Continental or Rutenber motor. With model 60 the choice may be between four-cylinder units having a bore of 4.125 inches and stroke of 5.25 or 4.25 by 5.25. With model 46 the bore and stroke is the same with four-cylinder motors—3.75 by 5.25 inches. Model 60 is fitted with five-passenger and roadster bodies. Model 46 has been designed to give ample seating accommodations for five persons in a lighter car. Aside from the motors there has been no important change from former Lambert practise, the construction including the well known Lambert friction transmission and other features of this line.

Mercer—Mercer Automobile Company, Trenton, N. J. Type 35, series M and O; five-passenger touring car and roadster. Models H and J continued. Practically the only change is in the matter of wheelbase, series M having 124 inches and series O 118. Motor, T head, four-cylinder, cast in pairs, 4.5-inch bore, five-inch stroke. Flechter carburetor. Bosch magneto. Multiple disc clutch. Selective transmission, three forward speeds and reverse. Tires, 34 by four inches forward on both new models, while series M has 34 by 4.5-inch tires on the rear. Quick detachable, demountable rims standard. Equipment of the Mercer line is very complete, including electric lighting and starting system, etc.

AGENCIES APPOINTED DURING THE MONTH.

Weldon Garage, Greenfield, Mass.; $3000; George W. Wilcox, William A. Davenport, William H. Gould.

Hanover Rubber Company, Hanover, Mass.; $25,000; George J. J. Clark, Calvin J. Ellis, Albert O. Sellman.

Mystic Motor Company, Groton, Conn.; $1000; Harry M. Hoxie, J. D. Miller, George McDowell, all of Brooklyn, N. Y.

Fort Wayne Auto Supply Company, Fort Wayne, Ind.; $50,000; J. M. Carmer, J. A. Brewer, H. H. Criswell.

Edisto Automobile & Machinery Company, Orangeburg, S. C.; $8000; president, H. C. Huggins; vice president, C. L. Sykes; secretary and treasurer, H. C. Huggins.

Mack Motor Truck Company, Albany, N. Y.; $10,000; Arthur J. Cook, Mae C. Fitzgerald, William A. Hamilton, 206 State street, New York City.

Carr Motor Company, Houston, Tex.; $10,000.

Mackey-Culehen Motor Company, Chicago, Ill.; $5000; N. W. Mackey, J. Maxculehen, F. De Young.

Newton Motor Company, Newton, N. C.; $10,000; R. Lee Hewitt, G. A. Warlick. R. W. Cline.

Toledo Auto Cycle Company, Toledo, O.; $20,000; A. L. Meyer, T. S. Powell, J. J. Kail, C. W. Neilson, Nat Smalley.

Reo Motor Sales Company, Wheeling, W. Va.; $10,000; T. H. Backman, W. A. Gullette, L. H. Backman, C. F. Backman, G. W. Yeago.

Henderson Tire Company, Buffalo, N. Y.; $400,000; C. O. Henderson, R. R. Hillman, A. L. Lyth.

Tulite Auto Bulb Company, Detroit, Mich.; $25,000; L. J. Lepper, J. M. Richardson, W. F. Adams.

Sav-Air Company, Mayfield, Ky.; to manufacture preparations to prevent punctures; J. T. Lochridge, W. F. Smity, J. W. Christy.

Motor Cooling Company, New York City; $10,000; to manufacture compounds for cleaning radiators; C. R. Allison, J. F. Clarke, W. J. F. Lammar.

Auto Supplies Company, Norfolk, Va.; $15,000; M. A. Brandt, H. M. Brandt and others.

Pneumatic Devices Company, St. Louis, Mo.; $50,000; to manufacture door opening and closing devices; Nelson S. Goftshall, Henry B. Graham, John F. Bishop.

Automatic Safety Signal Company, New York City; $25,000; to manufacture and deal in lamp appliances; H. Siegler, M. M. Becker, P. R. Feign.

Warm-Hand Steel Wheel Corporation, Poughkeepsie, N. Y.; $150,000; to manufacture steering wheels; G. E. Smith, W. S. Barton, J. C. Barton.

De Luxe Garage Company, Brooklyn, N. Y.; $5000; Frank Staendel, Katherine Staendel, Harry B. Potter.

FOREIGN TRADE OPPORTUNITIES.

(Address Bureau of Foreign and Domestic Commerce, Washington, Giving Number, Which Will Forward Correspondence, Unless Otherwise Stated.)

12,044, Motor Cars—A report from an American consul states that an official in a foreign country desires to be furnished with catalogues and prices of high-class American motor cars. Correspondence may be in English.

12,064, Automobiles—An American consular officer in a European country reports that the proprietor of an automobile agency in his district would like to secure the agency of a good American automobile firm not now represented in the country in question. The inquirer has been established in business since 1905 and is said to possess a very important establishment.

12,080, Agricultural Machinery and Tractor Plows—A report from an American consul in a European country states that a business firm in his district has requested him to put it in touch with American manufacturers of agricultural machinery of all kinds and steam or gasoline tractor plows. References are furnished and correspondence may be in English.

12,142, Motorcycles and Motor Trucks—An American consul reports that a Swedish machinery firm which already has the agency for an American automobile firm, desires to secure the agency for an American motorcycle and also for an American motor truck.

12,153, Automobiles—A well known South African firm of sporting goods dealers is seriously considering the establishment of an automobile branch of the business. An American consul states that as the firm has been very successful so far, it is probable that it would do well with automobiles. Reasonable territory would be required for a car retailing at $1400 to $2000, both runabout and five-passenger touring, with good clearance and right hand drive. The last is essential as left hand drive cars are not salable. Full details should be submitted, including catalogues, prices, discounts, shipping dimensions, freight to New York, etc. Correspondence may be in English.

FIRES OF THE MONTH.

Schmidt Bros. Company, Davenport, Ia.; entire plant and stock, $150,000.

Pipper Garage, Netcong, N. J.; garage, $4000.

Central Transfer & Storage Company, Indianapolis, Ind.; garage, $13,000.

Theodore Kinstre, St. Louis, Mo.; garage at 6211 Plymouth avenue, $2000.

Security Motor Car Exchange, Los Angeles, Cal.; garage and 12 automobiles, $15,000.

Sandruck & Sons, Baltimore, Md.; automobile building, $100,000.

United States Motor Sales Company, Johnstown, Penn.; garage, $1500.

H. F. Blerkamp, Durant, Ia.; garage and property, $12,000.

Preston B. Lee, Chadds Ford, Del.; garage and other buildings, $10,000.

John E. Fleming, Watertown, Mass.; garage, $20,000.

H. M. Corkran, 12 South Maryland avenue, Atlantic City, N. J.; garage.

F. H. Rummer, Hamilton street, Jamestown, Penn.; garage.

REPORTED CHANGES IN TRADE ADDRESSES.

Rambler Motor Car Company, Providence, R. I., from 355 Angell street to 28 Mathewson street.

California Cycle Car Company, Los Angeles, Cal., from 818 South Main street to 612 South Olive street.

Admiral Manufacturing Company, Kansas City, Mo., from 715 Lydia avenue to 1331 Walnut street.

Edw. G. Budd Manufacturing Company, Philadelphia, Penn., from 807 North American building to Station E.

Roy E. Warner, Louisville, Ky., from 542 South Third street to 928, same street.

E. S. Dimmock, Tacoma, Wash., from Seventh street and Pacific avenue to box 989.

Chandler & Hightower, Fort Worth, Tex., to Stock Yards station.

Boas Garage, Fort Worth, Tex., from 109 East 14th street to box 174.

West Haven Motor Company, West Haven, Conn., from 26 Elm street to 152 Lute street.

C. E. Whitcomb Auto Company, Kansas City, Mo., from 3015-17 East 12th street to Y. M. C. A., station B.

Fifty-Second Street Auto Repair Company, New York City, from 351 West 52nd street to 325 Ames avenue.

Michigan Wheel Company, New York City, from 69 Cortlandt street to Grand Rapids, Mich.

East Side Auto Repair Company, Kansas City, Mo., from 3619 Independence street to 3825 Independence avenue.

Myranda Motor Car Company, St. Louis, Mo., from 1012 West Grand avenue to 302 Dolph street.

West End Garage, New York City, from 574 West 130th street to 3-5 Lawrence street.

J. M. Doom Motor Car Company, Bowling Green, Ky., to Knoxville, Tenn.

Square Motor Horn Company, New York City, from 495 East 134th street to 314 Adams street, Newark, N. J.

Schug Electric Manufacturing Company, Detroit, Mich., from 311 Jefferson avenue to 254 Larned street, East.

White Manufacturing Company, Pottstown, Penn., to Fourth and Lime streets, Waterloo, Ia.

Diamond Manufacturing Company, Des Moines, Ia., from 2-3 Equitable building to 1007 Locust street.

Rub-On Varnish Company, Buffalo, N. Y., from 368 Elm street to 97 Brayton street.

Niagara Sales Company, Buffalo, N. Y., from 704 Main street to 329 Elmwood avenue.

Drake & Promenchenkel, Detroit, Mich., from 200 King street to 206 Marston street.

Angiada Company, Detroit, Mich., from 650 Woodward avenue to Free Press building.

Motorcycle Co-Operative Supply Company, Detroit, Mich., from 656 Woodward avenue to 471, same street.

Pla-Tina Company, Los Angeles, Cal., from 1103 Trust & Savings building to 1129 Mohawk street.

California Novelty Art Company, Los Angeles, Cal., from 618 South Olive street to 629 Story building.

R. Schmidt & Son Company, Jersey City, N. J., from 3193 Boulevard to 466 Amsterdam avenue.

Stoddard Motor Company, New York City, from Broadway and 57th street to 1932 Broadway.

Washington Bridge Auto Company, New York City, from 187th street and Amsterdam avenue to 249 West 130th street.

Auto Lighting Exchange Company, New York City, from 2236 Broadway to 206 West 76th street.

Cook Motor Vehicle Company, St. Louis, Mo., from 2725 Olive street to 5187 Delmar street.

American Sales Company, Louisville, Ky., from 524 South Fourth street to Fourth and York avenues.

Rowe Motor Manufacturing Company, Coatesville, Penn., to Downingtown, Penn.

Ganahl Auto Shop, St. Louis, Mo., from 2741 Gravois avenue to 1512 Locust street.

Missouri Motor Car Company, St. Louis, Mo., from 1131 Olive street to 3007 Locust street.

Public Service Motor, New York City, from 32 William street to 1790 Broadway.

General Vehicle Company, New York City, from 505 Fifth avenue to 30 East 42nd street.

Royal Equipment Company, Chicago, Ill., from 343 South Dearborn street to 748 Webster building.

J. C. McIntyre, Chicago, Ill., from 33rd street and South Park avenue to 563 East 34th place, Armour station.

Moline Automobile Company, Chicago, Ill., from 1508 Michigan avenue to 2538 same street.

Ford Motor Company, Kansas City, Mo., from 1608 Grand avenue to 11th and Winchester avenues.

H. E. Halbert, Chicago, Ill., from 1408 Michigan avenue to 606 Independence building.

Handy Auto Supply Store, Chicago, Ill., from 4134 Irving Park boulevard to 3233 West Lake street, Garfield Park station.

Tebeau Motor Car Company, Kansas City, Mo., from 710 Grand avenue to 20th and Olive streets.

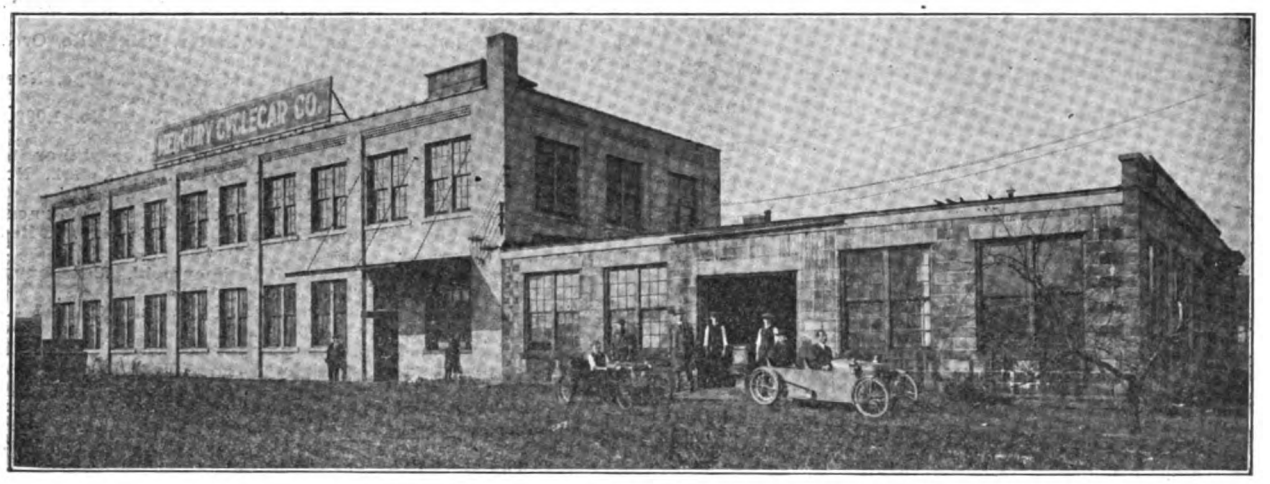
Motor Delivery Company, New York City, from 3 Lawrence street to 42 Downing street.

Volkmar Auto Starter Company, New York City, from 712 Mail building to 1218 Union avenue.

American Manufacturing & Distributing Company, Louisville, Ky., to 1790 Broadway, New York City.

Chicago Pneumatic Tool Company, Chicago, Ill., from 1337 Michigan avenue to Fisher building.

Ivan W. Olsson, Chicago, Ill., from 3324 North Clark street to 4637 North Clark street, Ravenswood station.



Plant at 807-815 Scotten Avenue, Detroit, Where the Mercury Cyclecar Company Produces Mercury Cyclecars.

Werner Radiator Company, Chicago. Ill., from 2642 Michigan avenue to 850 South Canal street.

Ray W. Watkins, Delaware, O., to Radner, O.

Lake Avenue Automobile Company, Cleveland, O., from 8500 Lake avenue to 2033 North 89th street.

Lakewood Auto Sales & Garage Company, Cleveland, O., from Detroit avenue to 1412 Riverside road.

Queen City Auto Company, Cincinnati, O., from 810 Race street to 73 East McMillan street.

Imperial Motor Car Company, Cincinnati, O., from 960 East McMillan street to 1609 Madison road, Station D.

Hudson River Garage Company, New York City, from 2 West 90th street to 133 Amsterdam avenue.

M-Z Tire Company, New York City, from 28 Warren street to 75 Chambers street.

Majors Auto Repair Company, St. Louis, Mo., from 1117 West Cardinal street to 3332 Taunton street.

Winton Motor Carriage Company, Detroit, Mich., from 736 Woodward avenue to 998, same street.

Security Auto Company, Detroit, Mich., from 1581 Woodward avenue to 2128, same street.

Lambert Ignition Company, New York City, from 527 Fifth avenue to 66 Nassau street, Princeton, N. J.

What Cheer Auto Company, Providence, R. I., from Sabin and Cope streets to 322 Broad street.

Fisk Rubber Company, San Francisco, Cal., from 418 Golden Gate avenue to 1431 Van Ness avenue.

Indian Garage & Sales Company, Kansas City, Mo., from 3316 East 15th street to 2201 Brooklyn street.

Stephens Motor Tire Company, Kansas City, Mo., from 818 Walnut street to 1707 Grand avenue.

Babcock Electric Garage & Sales Company, Kansas City, Mo., from 3356 Main street to 3901 Forest street.

AUTOMOBILE PATENTS GRANTED RECENTLY.

Spring Wheel—Vincenzo Mancini, Schenectady, N. Y., No. 1,078,632. Filed Aug. 26, 1912.

Rotary Valve for Motors—Frederick G. Schehr, Detroit, Mich., No. 1,078,699. Filed June 10, 1912.

Atomising and Mixing Valve—Wilson D. Craig Wright, Philadelphia, Penn., assignor of one-half to Joseph Wright, same city, No. 1,078,816. Filed June 3, 1912.

Combined Friction and Positive Clutch—Henry Druschel, Columbia, Penn., No. 1,078,840. Filed Aug. 6, 1912.

Metallic Wheel Tire—Charles Quintus, Garner, Ia., No. 1,078,876. Filed Jan. 6, 1913.

Shock Absorber—John B. Thomas, Lakewood, N. J., No. 1,078,885. Filed Aug. 9, 1912.

Spring Wheel—Joseph R. Gerard, Parsons, Kan., No. 1,078,916. Filed Nov. 30, 1910.

Valve Structure for Internal Combustion Motors—Marshall E. Morel, Sheridan, Ill., No. 1,078,942. Filed March 14, 1912.

Wheel Brake—Rollin H. White, Cleveland, O., assignor to the White Company, same city, No. 1,078,976. Filed Oct. 9, 1908.

Pneumatic Wheel—Joseph U. Wells, Fallen Leaf, Cal., No. 1,079,082. Filed July 12, 1913.

Rotary Engine—Ernest G. Jones and Thomas T. Patchel, Cape May, N. J., No. 1,079,177. Filed April 11, 1913.

Shock Absorber—Charles N. Sowden, Guantanamo, Cuba, No. 1,079,191. Filed Dec. 13, 1912.

Motor—William R. McKeen, Jr., Omaha, Neb., assignor to McKeen Motor Car Company, same city, No. 1,079,255. Filed Aug. 13, 1907.

Timing Device—James P. Middleton, Pittsfield, Mass., No. 1,079,256. Filed May 21, 1912.

Motor—Norris C. Ward, Chicago, Ill., No. 1,079,307. Filed May 27, 1912.

Automobile—Henry A. Baker, St. Louis, Mo., No. 1,079,320. Filed Jan. 26, 1912.

Gaseous Fuel Mixer—John T. Hazelton, Somerville, N. J., No. 1,079,338. Filed Sept. 21, 1912.

Motor—Frank W. Ruggles, Springfield, Mass., assignor of one-half to Emerson G. Gaylord, Chicopee, Mass., No. 1,079,364. Filed Sept. 2, 1909.

Tire—John G. Clark, Provo, Utah, No. 1,079,397. Filed June 7, 1913.

Motor—Adolphe C. Peterson, Minneapolis, Minn., No. 1,079,578. Filed Jan. 13, 1909.

Carburetor—John Gustav Burchartz, Cologne, Germany, No. 1,079,634. Filed July 26, 1912.

Motor—Fred D. Calkins and Alfred C. Johnson, Sunnyvale, Cal., No. 1,079,741. Filed Feb. 15, 1912.

Tire—John J. Fields, New York City, No. 1,079,755. Filed Jan. 6, 1912.

Windshield for Automobile Radiators—Albert Holland, Nome, N. D., No. 1,079,765. Filed June 17, 1912.

Dust Cap for Tire Valves—John Lynn, Alice, Tex., No. 1,079,781. Filed April 28, 1913.

Spark Plug—John J. Meyer, Yonkers, N. Y., No. 1,079,790. Filed March 6, 1913.

Spring Wheel—James Dell Collier, Redlands, Cal., No. 1,079,840. Filed Oct. 11, 1912.

Dirigible Lamp—William B. Dievendorf, Sprakers, N. Y., No. 1,079,844. Filed July 25, 1913.

Motor—Benjamin Blake Dorr, West Toledo, O., No. 1,079,845. Filed May 18, 1912.

Variable Speed Gearing—Roy Hanmore Gerard, Berkeley, Cal., No. 1,079,852. Filed Oct. 9, 1912.

Fender—Joseph Mascari, Memphis, Tenn., No. 1,079,872. Filed Feb. 28, 1911.

Vaporizer and Igniter—Wilbur O. Platt and John Reid, Oil City, Penn., assignors to Joseph Reid Gas Engine Company, same city, No. 1,079,878. Filed Oct. 8, 1912.

Tread Section for Anti-Skidding Devices—Harry D. Weed, Syracuse, N. Y., No. 1,079,907. Filed March 26, 1908.

Carburetor—Cyril Clarke Boville Morris, London, England, No. 1,079,947. Filed Feb. 5, 1913.

Vaporizer Attachment—Edward Morris Norton, New York City, assignor to De La Vergne Machine Company, same city, No. 1,079,950. Filed Feb. 6, 1913.

Automobile Fender—Robert H. Prestlen, Norfolk, Va., No. 1,079,951. Filed June 8, 1912.

Transmission Mechanism—John G. Utz, Detroit, No. 1,079,961. Filed Nov. 22, 1910.

Tire Gauge—John F. Waters, Kansas City, Mo., No. 1,079,965. Filed June 29, 1912.

Wheel and Detachable Rim—William Thomas Smith, Bolton, England, No. 1,079,995. Filed July 11, 1908.

Cushion Wheel—Walter D. Douglas-Jones, London, England, No. 1,080,004. Filed Dec. 16, 1909.

Sidecar Attachment—Leo A. Pothast, Melbourne, Ia., No. 1,080,020. Filed Feb. 21, 1913.

Tire Chain—Phibia Gauthier, Lowell, Mass., No. 1,080,054. Filed May 15, 1913.

Wrench—Jacques Huber, Basel, Switzerland, No. 1,080,064. Filed April 24, 1913.

Automatic Fire Extinguisher—Alphonse La Breche, Jefferson, S. D., No. 1,080,068. Filed Jan. 3, 1913.

Spark Plug—Frederick J. Walker and Frank C. Loeffler, Des Moines, Ia., No. 1,080,089. Filed Jan. 9, 1912.

Spring and Pneumatic Wheel—Joseph A. Gray, Norwalk, Conn., No. 1,080,106. Filed July 7, 1910.

Changeable Headlight—Victor Howard and James P. Wrigley, Oakland, Cal., No. 1,080,110. Filed March 6, 1913.

Carburetor—Olney B. Monosmith, Lorain, O., No. 1,080,118. Filed Aug. 30, 1912.

Engine—Don E. Pratt, San Francisco, Cal., No. 1,080,123. Filed July 10, 1912.

Cushion Wheel—John J. Van Iderstine, Kansas City, Mo., No. 1,080,128. Filed Feb. 25, 1913.

Spring Tire for Wheels—Charles Henry Vidal, Chiswick, England, No. 1,080,129. Filed Aug. 29, 1911.

Carburetor—Alexis R. Pribil, Detroit, No. 1,080,166. Filed Oct. 4, 1911.

Lock Nut—Jacob M. Doolittle, New Kensington, Penn., No. 1,080,199. Filed Jan. 7, 1913.

Fuel Pump—Alfred H. Hoadley, Providence, R. I., No. 1,080,216. Filed Dec. 22, 1911.

Valve for Gas Engine Starters—Gottlieb R. Holliger, Birmingham, Ala., No. 1,080,218. Filed June 15, 1912.

Dry Cell Battery—Alfred Rordame, Salt Lake City, Utah, No. 1,080,234. Filed May 14, 1913.

Resilient Wheel Hub—Joseph W. Bready, Springfield, Mass., assignor of one-third to Charles P. Kenney, same city, No. 1,080,253. Filed April 30, 1913.

Automatic Headlight—Benjamin H. Brown, George W. Edwards and Edmund T. Manwell, Marysville, Cal., No. 1,080,256. Filed May 10, 1913.

Anti-Skid Attachment for Tires—William E. Budd, Elizabeth, N. J., No. 1,080,259. Filed Jan. 29, 1913.

Combined Air Motor and Compressor for Starters—Harry A. Loud, Pasadena, Cal., No. 1,080,289. Filed May 23, 1912.

Tire—John J. Patton, New York City, No. 1,080,295. Filed Feb. 14, 1913.

Oiler—Kirkwood A. Boggs, Fort Dodge, Ia., No. 1,080,320. Filed Oct. 31, 1911.

Engine Starter—Frank Gahm, Streator, Ill., No. 1,080,335. Filed Aug. 14, 1912.

Demountable Rim—Leo A. Gordon, Fall River, Mass., No. 1,080,337. Filed June 12, 1913.

Motor Vehicle—Thomas F. McAllister, Prineville, Ore., No. 1,080,361. Filed July 27, 1912.

Spring Wheel—John F. Sipe and Harry E. Sipe, New York City, No. 1,080,378. Filed Dec. 14, 1909.

Tire—Herbert L. Stillman, Westerly, R. I., No. 1,080,285. Filed Feb. 23, 1911.

Tire—William G. Chipley, Atlanta, Ga., assignor to Pneumatic Rim & Tire Company, Wilmington, Del., No. 1,080,416. Filed Aug. 31, 1912.

Windshield—Jerome Francis Kennedy and Ernest Norbert Kennedy, London, England, No. 1,080,458. Filed Oct. 20, 1911.

Primary Battery—Charles B. Schoenmehl, Waterbury, Conn., No. 1,080,483. Filed Dec. 9, 1910.

Wheel Rim—Orson L. Pickard, Columbus, O., No. 1,080,580. Filed Dec. 20, 1909.

Resilient Wheel—Joseph Rene Ayotte, Chicago, Ill., assignor to Alexander Airless Auto Wheel Company, same city, No. 1,080,621. Filed March 18, 1912.

Automobile Sign Holder—Henery Osborne Havemeyer, Mahwah, N. J., No. 1,080,631. Filed Dec. 27, 1910.

Spring Wheel—Abraham Morgan, Independence, Mo., No. 1,080,649. Filed Oct. 17, 1912.

Spring Cover—Arthur E. Peters, Westmont borough, Penn., No. 1,080,652. Filed May 13, 1913.

Traction Plow—Simon Belanger, Warroad, Minn., No. 1,080,673. Filed Jan. 10, 1913.

Carburetor—William P. Huguelet, Chicago, Ill., assignor, by mesne assignments, to Muir Company, Inc., Baltimore, Md., No. 1,080,696. Filed Sept. 27, 1912.

Resilient Wheel—Lem H. Schoonover, Boise, Idaho, No. 1,080,720. Filed Aug. 23, 1913.

Air Compressor—William Everett Ver Planck, Erie, Penn., assignor to General Electric Company, No. 1,080,737. Filed Feb. 20, 1913.

Shock Absorber—George C. Beck, Spokane, Wash., No. 1,080,745. Filed Jan. 28, 1913.

Motor Starter—Charles H. Myers, Buffalo, N. Y., No. 1,080,773. Filed March 1, 1912.

Variable Speed Mechanism—John Clifton Riegel, Pottsville, Penn., No. 1,080,782. Filed Nov. 30, 1912.

Timer and Distributor—James M. Smith, Philadelphia, Penn., assignor of one-half to Charles Adsit Magruder, Bryn Mawr, Penn., No. 1,080,788. Filed May 17, 1912.

Engine—Anton M. Bach, San Francisco, Cal., No. 1,080,800. Filed Sept. 9, 1912.

Storm Front for Vehicles—Jesse B. Cretors, St. Paris, O. No. 1,080,812. Filed Aug. 29, 1912.

Rim—Edward Frederick Dreger, Oakland, and Frank Elvin Pfister, Piedmont, Cal., No. 1,080,814. Filed March 2, 1912.

Carburetor—Ernest Percival Everest, Coventry, England, No. 1,080,815. Filed Nov. 11, 1911.

Tire—Albert H. Fisher, Lincoln, Neb., No. 1,080,818. Filed June 25, 1912.

Rotary Valve for Motor—Milford G. Chandler, Chicago, Ill., assignor to Chandler Engine Valve Company, that city, No. 1,080,892. Filed April 1, 1912.

ACCESSORIES, SUPPLIES AND FITTINGS.

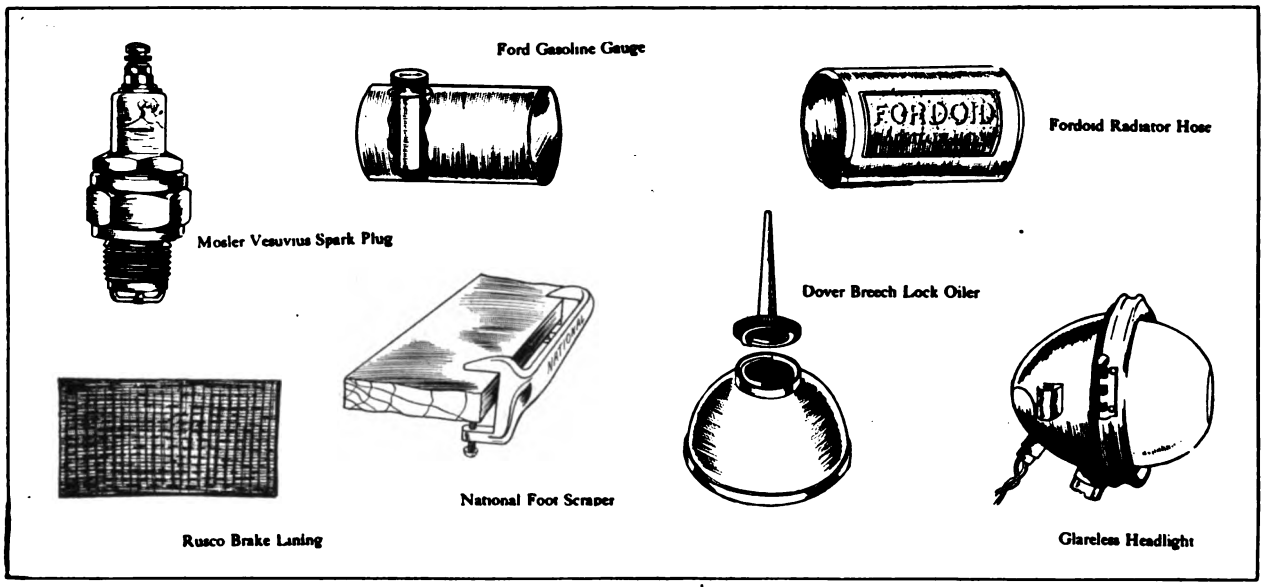
(When Writing to Advertisers, Please Mention The Accessory and Garage Journal.)

Mosler Vesuvius Spark Plug.

A. R. Mosler & Co., Mt. Vernon, N. Y., well known maker of the Mosler Spitfire spark plugs, is marketing the Vesuvius plug, which is designed to withstand severe service. The centre core is of a special stone, practically indestructible, and one of its qualities is that it is so shaped and constructed as to be absolutely gas tight. Another feature is that the plug may be disassembled easily and the parts replaced without interfering with the original adjustment of the points. The last named are of genuine platinum, liberal in size, making for efficiency and durability. The Vesuvius plug is made to fit any motor and is manufactured with various threads. The same high grade workmanship and material for which the product of A. R. Mosler & Co. is noted is incorporated in the new design.

Ford Gasoline Gauge.

The Modern Specialty Company, Racine, Wis., has brought out a fuel gauge for model T Ford cars, which is a distinct improvement over the usual method of noting the contents of the container, that of employing a stick or a rule. The Modern gauge is constructed of an outer tube of heavily leaded steel, with an inner casing containing a brass float, fitted to a spiral upright, which turns the indicator on the dial as the fuel is raised or lowered in the tank. The head containing the etched dial and indicator is of heavy brass and is threaded to fit any



Ford gasoline tank. The gauge is installed easily and without any alterations by simply removing and discarding the usual filler cap and screwing in the Modern. All parts are substantially constructed and the maker states that there are no parts to become disarranged through service. It retails for $2.50.

Fordoid Radiator Hose.

The importance of having an unobstructed flow of water in the cooling of the motor, especially with the thermo-syphon system, is well understood by those familiar with the internal combustion engine. With the model T Ford motor the outlet water manifold is connected to the radiator by a rubber hose, and to obtain efficiency from the system this tube should be kept clear. With inferior material, the plies of fabric separate, diminishing the diameter of the hose and impeding the flow of the water. The Thermoid Rubber Company, Trenton, N. J., is producing the Fordoid radiator hose especially for the model T Ford motor. Both inlet and outlet designs are made and the maker guarantees that the material will not harden or soften in service, or when various anti-freezing solutions are utilized. The outlet hose sells for 50 cents, the inlet 40.

Rusco Brake Lining.

Rusco brake lining is produced by the Russell Manufacturing Company, Middletown, Conn., and the maker states that it is constructed of the best quality asbestos, solidly woven and thoroughly impregnated with a special compound to render it water, oil and heat proof. It contains a number of brass wires, these being interwoven with the asbestos. It is produced in standard sizes and thicknesses.

National Foot Scraper.

More or less mud and dirt is carried into the car, soiling the carpets and robes, and to keep these articles clean the National Motor Supply Company, Cleveland, O., has brought out a useful and inexpensive device, termed the National foot scraper. It is secured to the running board by clamping screws, is very compact and neat in appearance and is provided with a suitable edge for removing deposits from the shoes.

Dover Breech Lock Oiler.

The Dover Stamping & Manufacturing Company, Cambridge, Mass., is marketing the Dover wide mouth breech lock oiler, a new design, which makes for convenience in that the spout may be easily and quickly detached and replaced by a rotating movement. This permits of replenishing the supply of fluid without spilling as the opening is ample in size. The oiler is practically a one-piece construction, the bottom being of the best clock spring steel, pressed against the shoulder of the dome, and the seam double turned. The spout and breech are put together in the same manner. No cement, solder or brazing is used in the construction. The oiler is made of the best cold rolled steel, brightly polished, plated and lacquered, and is designed to withstand severe use. It is made in 10 sizes, Nos. 12 to 16, these having capacities ranging from three ounces to one pint.

Glareless Headlight.

Otto Luyties, 546 Fifth avenue, New York City, is marketing the Glareless headlight, which the maker states eliminates the dazzling and blinding rays without affecting the efficiency of the lamp. This is held to be due to the type of front glass utilized, it involving details of optical principles which are said to be very complicated. When viewed from the front the effect is that of an attractively frosted globe having a diffused light and showing a relatively small central bright spot. It is stated that this portion is not blinding because it is seen against an illuminated background.

Kells Tank Cover.

The W. J. Kells Manufacturing Company, Jersey City, N. J., is producing a cover for tanks, although especially designed for Prest-O-Lite gas tanks. It is constructed of spring metal, a one-piece design, and has a diameter slightly less than the tank and clamps over the last named member. One end is rounded while the other is open to permit of inspecting the pressure gauge of the Prest-O-Lite tank. The purpose of the cover is that it can be polished to correspond with the other trimmings.

O'Brien Fore Door Ventilator.

The Joseph F. O'Brien Company, 61 Park Place, New York City, is marketing the O'Brien fore door ventilator, an outside view of which is shown herewith. It is so constructed that it can be adjusted to any thickness of cowl or dash by employing different lengths of machine screws. The amount of air admitted is regulated from the inside by turning an inside projection, and the maker states that the vibration will not affect the adjustment. The exterior of the ventilator is covered with a wire gauze, preventing entrance of rain or dust.

Fairchild Radiator Cap.

The Fairchild Sales Company, 1777 Broadway, New York City, distributor for the Fairchild Ford crank locks and spring radiator caps, is offering a new Fairchild product termed the bayonet lock radiator cap. It is designed for model T Ford radiators and as the principle

Digitized by Google

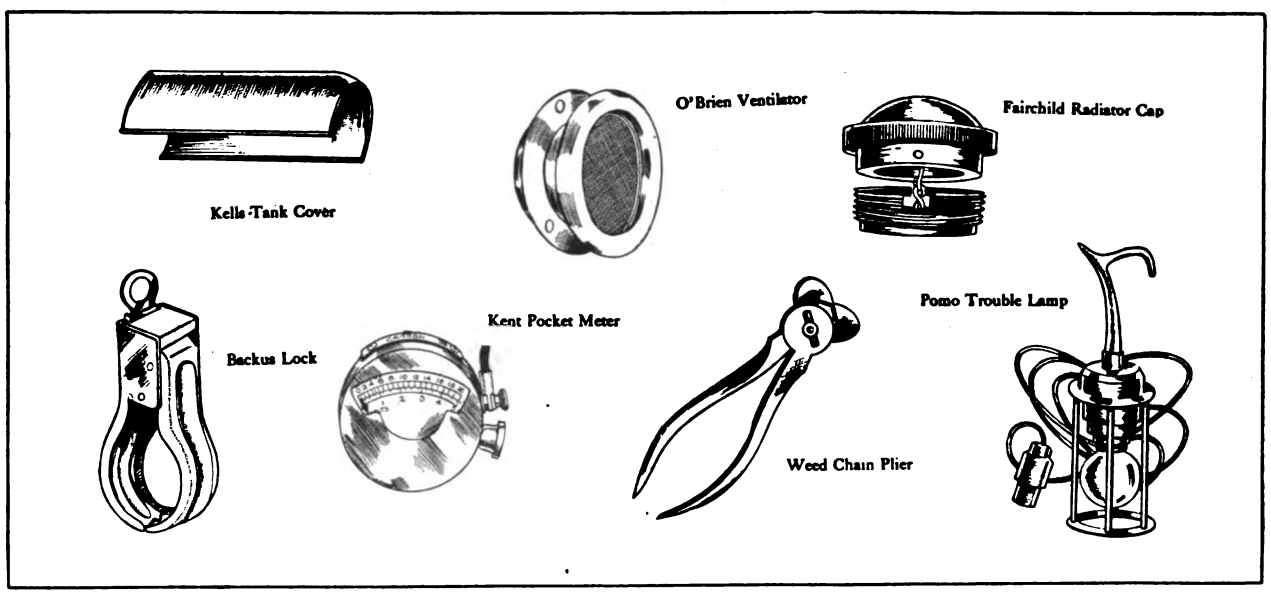
involved is similar to the socket utilized in electric lamp connectors, it is removed and replaced easily by a slight movement. The Fairchild is fitted easily and quickly and includes a new cap, loss of which is prevented by the use of a chain, a feature of the Fairchild design. The maker states that the new cap can be fitted in three minutes. It retails for $1.25.

Kent Pocket Meter.

The Atwater Kent Manufacturing Works, Philadelphia, is marketing the Kent pocket meter, which is an automatic volt-ammeter for ascertaining the condition of dry cells and storage batteries. The instrument may be utilized for testing batteries in connection with automobiles, stationary engines, launches, etc., being calibrated especially for the work. The needle is delicately pivoted and the readings are accurate. One of the qualities of the instrument is that no change is made in the connection to the battery for reading voltage and amperage, as the latter is obtained by simply pressing a button. A flexible lead of ample length is provided with each meter, which is of the dead beat type, insuring accuracy. The Kent comes in a neat hand sewed leather case and is calibrated for both volts and amperes. One of its qualities is the use of a substitute for glass, the maker stating that it is unbreakable.

Backus Lock.

Numerous locking devices have made their appearance on the market, but generally they have been designed to lock a particular component of the car, the clutch, ignition, etc., for example. The Backus, manufactured by the Backus Novelty Company, 512 Water street, Smethport, Penn., differs from these in that it may be employed for a number of purposes. It comprises a pair of movable jaws having an opening of 4.5 inches and a



locking mechanism, also a ratchet arrangement which permits of locking in any desired position. The jaws are provided with rounded teeth which will not tear or injure soft materials, as when securing the robe, for example. The Backus may be utilized for locking the gearshift and emergency brake levers together, the ignition and throttle levers, securing the robe to the radiator cap when it is thrown over the cooler, or to the robe rail and numerous other articles carried in the car. No two sets of locks are made alike and the sets of two and three have the same key combination, two keys to each lock. It sells for $1.

Weed Chain Plier.

The Curreir-Koeth Manufacturing Company, Coudersport, Penn., is producing the Koeth interchangeable tool, to which a large number of heads may be attached to provide for using it as pliers, pinchers or a shearing tool. The automobile kit comprises, in addition to the tool, six heads, including those for obtaining a Weed chain plier as illustrated. This design opens the link easily and for the proper distance, and the maker states that it can be operated easily with one hand. The tool and heads are constructed of tool steel, drop forged, ground and tempered, and it is stated that the heads may be changed as readily as auger bits in a brace.

Pomo Pocket Trouble Lamp.

The G. C. Parker Company, 122 Milk street, Boston, is marketing what is claimed to be the smallest inspection or trouble lamp manufactured. It is equipped with a hook member, making for convenience in service, and the lightness of the design permits of hanging it from the button hole of a coat or the brim of a hat. The lamp is an all-metal construction with the bulb protected by a cage. The bulb is a six-volt, six candlepower tungsten. Ediswan sockets are utilized for the lamp base and the battery plug, and are connected by 10 feet of silk cord. The lamp is finished in nickel and is inexpensive. It retails for $2.

Destroy-O Carbon Remover.

Destroy-O carbon remover is manufactured by the Atlas Supply Company, 3233 West Lake street, Chicago, and comes in 1.5-quart cans. As the name implies it is utilized to remove carbon and other deposits from the cylinders without displacing these members. The fluid is inserted through the spark plug opening and allowed to remain in the cylinders for about 30 minutes, after which it is removed with a grease or oil gun. The motor is then started. The preparation taken from the cylinders may be used over and over again, and the maker states that it will soften the carbon which is carried out in the exhaust. Destroy-O carbon remover is moderately priced and makes for economy in that only a small amount is employed in each cleaning process. The Waite Auto Supply Company, 81 Exchange Place, Providence, R. I., is representative for the maker. The retail price is $1.

A C Titan Spark Plug.

The Champion Ignition Company, Flint, Mich., maker of the Champion spark plugs, has brought out a new design which is stated to be regular equipment on Cole and Cadillac cars. A very large porcelain, easily replaced, is employed, and it is maintained that the dimensions make for durability and efficiency. The centre electrode is screwed into the porcelain and cemented. A special washer is fitted to the top of the porcelain and pressed down with a closed nut to prevent leakage. The bottom of the porcelain has a very wide seat and where it takes its bearing in the shell is fitted with a corrugated aluminum washer. It is stated that the last named member conducts the heat from the porcelain. Both the centre and shell electrodes are substantial, the latter being blade shaped, and have an increased diameter at the point of contact with the shell to draw the heat. A cool plug is claimed for the design of the electrodes, making for more satisfactory operation of the motor at low speeds. It lists at $1.

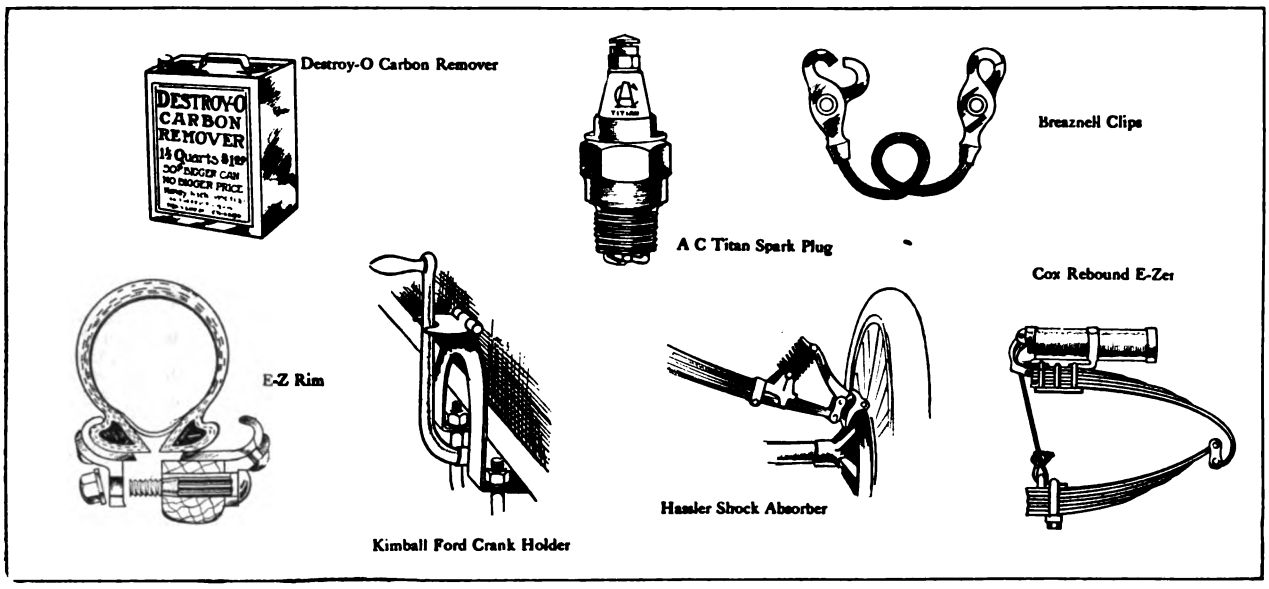
Breaznell Clips.

J. H. Breaznell, 26 Court street, Brooklyn, N. Y., is marketing the Breaznell clip and terminal connector for batteries and spark plugs. One of the qualities of the clip is that it can be attached to a spark or other terminal without displacing the usual nut. The Breaznell clip is provided with two gripping jaws, which may be expanded and contracted easily. A lock washer construction is included, so that when the spark plug nut, for example, is screwed down, vibration cannot loosen the clip. Provision is also made for retaining the bared end of the wire and clamping it securely, and without the use of solder. The clips are well made, substantial and inexpensive.

E-Z Rim.

Many owners desire to obtain the advantages and convenience of the quick detachable rim, but hesitate to make the change owing to the alterations and expense involved. With some types of rims it is necessary to cut down or build up the felloe and sometimes the spokes must be altered. The E-Z Rim Company, 146 Summer street, Boston, is marketing the E-Z Rim, which presents interesting and practical advantages, in that the maker states that it can be applied to any automobile wheel without alterations and at a moderate cost. As will be noted by the accompanying illustration, the use of split rings, cams, levers, etc., is eliminated in the E-Z, it comprising a removable ring to which lugs are fitted, these retaining it to the rim proper by means of bolts. The

Digitized by Google



method of retention is similar to that employed with demountable types, six nuts and bolts anchoring the ring to the felloe. One of the qualities of the E-Z is that no tool, other than the brace wrench supplied with each equipment, is necessary to remove and replace a tire. With the E-Z the clincher shoes may be utilized until worn out and replaced by quick detachable types, a universal arrangement. The company manufactures a rim for model T Ford cars which are fitted with clincher rims. This style retails for $15 a set.

Kimball Ford Crank Holder.

To retain and prevent the swinging of the starting crank, the Northern Specialty Company, Crystal Falls, Mich., has brought out a special design for model T Ford cars. It is attached easily as shown, and a hinge member permits of holding the crank in an upright position when not in service. Provision is made for locking the handle, thereby preventing use of the car by others than those intended. An opening is provided in the hinge member for the locking device. The Kimball crank holder sells for $1.50.

Hassler Shock Absorber.

Robert H. Hassler, West 10th and Canal streets, Indianapolis, Ind., has brought out a new type of shock absorber for model T Ford cars, which differs materially from conventional designs. The absorber includes a spiral spring of tempered spring steel which takes up all jolts and jars without hampering the movement of the car spring. The end of the car spring is supported by a lever arrangement and in such manner that when the spiral spring is compressed, the end of the car spring yields downward over a range of 1.25 inches. The rebound or expansion of the vehicle spring is retarded gradually by an extension of the lever member, which engages with the axle at the time of the upward movement. The lever member is held stationary during the movement and by reason of the compression of the spiral spring, holds the leaf or car spring down. The same principle is used for the rear of the machine.

Cox Rebound E-Zer.

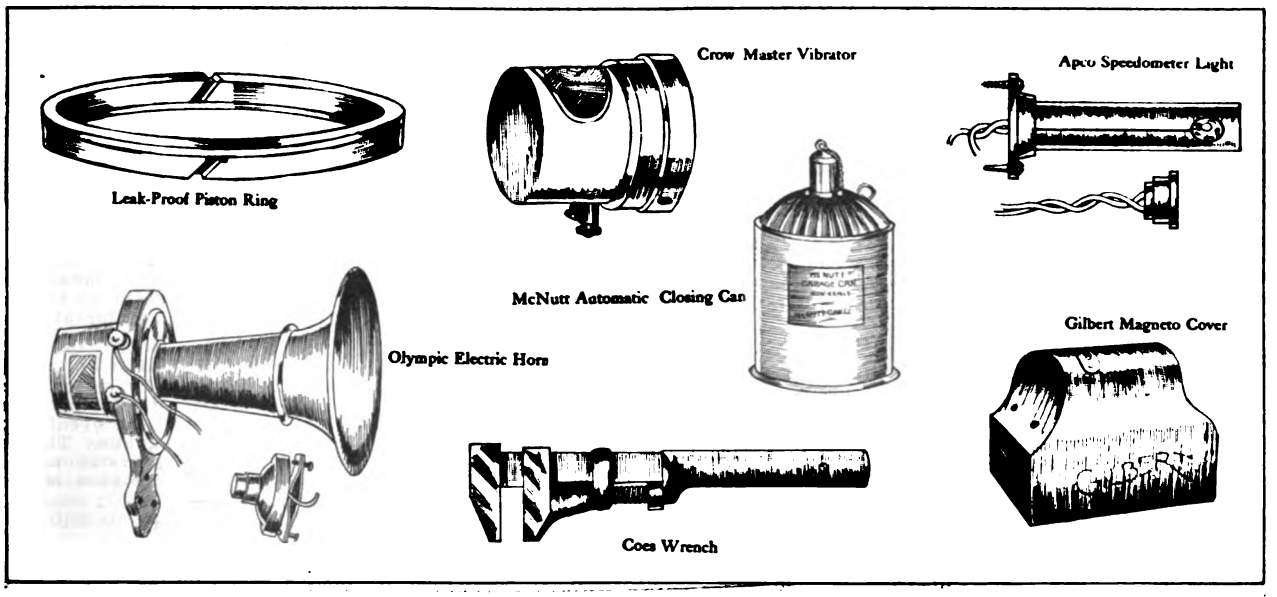
The Cox Brass Manufacturing Company, Albany, N. Y., is manufacturing the Cox Rebound E-Zer, which retards the rapid upward movement of the car springs by means of a friction clamping device and gradually allows the springs to expand to their normal position. The action of the friction clamps is entirely automatic, as they open when the springs are compressed and grip on the rebound. The clamps are fitted with cylinders enclosing compression springs, to which is attached an especially treated woven heavy canvas belt, 1.5 inches wide. This belt is water proof and feeds through the automatic friction clamps, and is fastened on the axle by special clips provided for this purpose. The E-Zer is applicable to all types of springs, and does not affect the resiliency of the car, loaded or empty, as it does not come into action until the rebound occurs.

McNutt Automatic Closing Can.

The McNutt Non-Explosive Can Company, 352 Pearl street, New York City, is manufacturing the McNutt automatic closing can, which is produced in five and 10-gallon types. The containers are equipped with the McNutt patent safety device, which prevents explosions as well as the loss of gasoline. They are constructed of a high grade material and to withstand severe service. The company also markets self-closing fuel cans in capacities ranging from one gallon to five. They are adaptable for private and public garages.

Leak-Proof Piston Ring.

Much of the poor compression existing in motors is due to worn and consequently poor fitting piston rings. This results in lost power and the lubricant works up into the combustion chamber, creating carbon as well as causing ignition trouble through dirty or fouled spark plugs. These troubles are overcome in the Leak-Proof



Digitized by Google

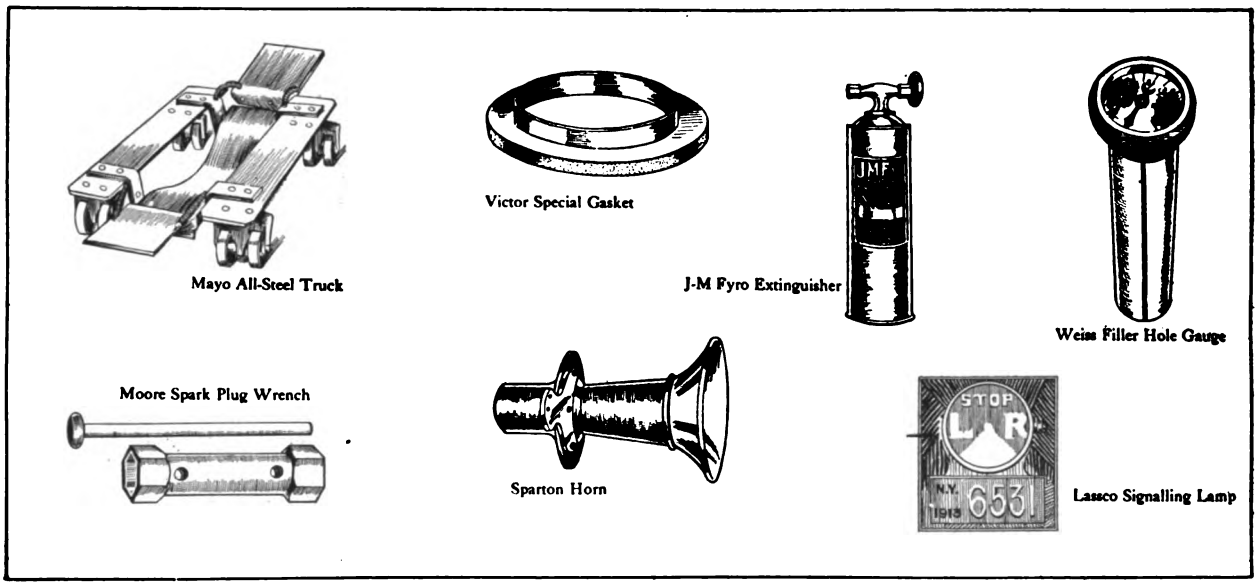
piston rings, so named because their mechanical construction is such that the gases cannot pass between the slots. There are two of these members, but they may be said to be practically sealed in that the mixture cannot escape on the compression stroke. The tension of the ring is even throughout, preventing wear of the cylinder walls at any one place as well as scoring. The rings are constructed in sizes to meet all requirements and it is not necessary to make any alterations to the piston. The Leak-Proof rings are marketed by the Motor Parts Company, 185-7 Columbus avenue, Boston, and 818 North Broad street, Philadelphia.

Crowe Master Vibrator.

The Lisle Manufacturing Company, 123 Main street, Clarinda, Ia., is marketing the Crowe master vibrator, which differs from those of usual construction in that it is non-adjustable. It is designed for model T Ford automobiles and is noticeable for its compactness and neat design, being but 2.5 inches in diameter. The company points out that the non-adjustable feature is important in that the vibrator always delivers the same hot spark and that the unit does not require any attention whatsoever after installation. Although designed to be utilized in connection with the flywheel magneto it can be operated as successfully when the source of current supply is dry cells or a storage battery. The Crowe vibrator is constructed of high grade material and the workmanship is first class in every respect.

Apco Electric Speedometer Light.

The Auto Parts Company, Providence, R. I., is marketing the Apco electric speedometer light, an inexpensive lamp which comes complete with all fittings. The light proper comprises a 3.5-inch dash bracket with a silver plated reflector and a 2.5 candlepower tungsten bulb. The bracket is mounted over the speedometer by two screws, and illuminates the dial when the circuit is closed by a switch. The latter is a pearl faced push button which is located on the heel board or in any other convenient place. A quality of the outfit is that the lamp may be maintained about 50 hours by a single dry cell. The latter is installed under the seat or in the tool box. Eight feet of double cord wire is supplied with each equipment, and complete directions accompany each light.



Olympic Electric Horn.

One of the latest types of moderately priced high grade electric horns is the Olympic, for which the Kolb Sales Company, 1790 Broadway, New York City, is distributor. It is of the vibrator type, but it is stated to be constructed on an entirely new principle, one eliminating all sparking and subsequent burning of the contact points. It is also held that the design is very simple and that adjustments are not required even after considerable service. Economy of current is emphasized, less than 1.25 amperes being utilized to obtain maximum efficiency. The sound is far reaching, but is free from harshness or discord. The Olympic is constructed in two styles, black enamel with nickel snare, or a metallic, brass or nickel finish. A suitable length of double cord wire and a high grade push button accompany each horn.

Coes Screw Wrench.

The Coes screw wrench, made by the Coes Wrench Company, Worcester, Mass., is a valuable addition to the tool equipment of both the owner and the garage. It is designed to withstand extra heavy service and being all metal is not subject to broken handles, etc. The bar is of steel, fully hardened and cold swaged, while the jaw is made extra heavy, of semi-steel and hardened. The screw is steel, a one-piece construction, not a screw plus a moving dowel and a hidden spring, and is provided with a polished and hardened ball race. The handle is a semi-steel casting, internally supported and retained by cross riveting, and the extension of the bar through the handle is also riveted.

Gilbert Magneto Cover.

It is important that the magneto be protected against foreign elements, especially road dust. The latter acts as an abrasive and unless removed subjects the working parts to undue wear. The Gilbert Manufacturing Company, New Haven, produces a variety of designs in magneto covers and carries in stock members to fit all standard types of magnetos. The covers are made in two types, a heavy sole and a patent leather. They are also made for motorcycle magnetos.

Mayo All-Steel Trucks.

The all-steel trucks produced by the Mayo Manufacturing Company, Chicago, are of the double wheel caster truss design, having long bearings and specially adapted to the garage or repair shop. The runway plates are self-elevating, are always clear of the floor and constitute a lock when depressed by the tire. But one model is made and it is held to be capable of carrying any size car. The trucks come in pairs, finished in black enamel.

J-M Fyro Extinguisher.

The H. W. Johns-Manville Company, Madison avenue and 41st street, New York City, has brought out a new chemical fire extinguisher of the one-quart type, known as the J-M Fyro. Because of its lightness and compactness it is specially adapted to be carried in the automobile or stored in the garage. It differs from the usual extinguisher in that compressed air is employed for discharging the extinguishing fluid. The latter is a liquid gas, five times as heavy as air, and on account of its weight quickly envelopes the flames, displacing the oxygen. When thrown on a fire it instantly volatilizes, forming a dense combustion and arresting gas in which flames cannot live. It is claimed that one quart of the J-M Fyro liquid will expand to 4000 cubic feet of fire annihilating gas and that one quart of ordinary extinguishing fluid will make only 1000 feet. It is held to be especially effective on naphtha, oil, varnish, calcium chloride and electrical fires, as well as gasoline. It is non-corrosive and will not injure metals, fabrics or furnishings. A feature of Fyro is that it does not deteriorate and is not affected by differing temperatures.

Victor Exhaust and Intake Gaskets.

The Victor Manufacturing & Gasket Company, Troy and 21st streets, Chicago, is marketing a special gasket for intake and exhaust pipes. It is of the centre flange type, composed of asbestos and copper and is designed to be compressed between the manifold and cylinder in the conventional manner. Not only does the flange prevent entrance of auxiliary air, but the escape of the exhaust gases as well. They are made in different sizes and diameters.

Weiss Filler Hole Gauge.

A filler hole gauge especially designed for motorcycles has been brought out by the Weiss Manufacturing Company, Torrington, Conn. It is fitted into the opening of the fuel tank, acting as a filler cap and gauge. The device is automatic in its action and is properly vented. The gauge is constructed to fit standard makes of motorcycles and comes nickel plated.

Lassco Rear Signalling Lamp.

The Lassco rear lamp and signalling device is manufactured by the Auto Safety Signal Lamp Company, 246 North street, Philadelphia. It is circular, about seven inches in diameter, and is divided into four sections, each

Digitized by Google

of which contains a small tungsten bulb. These may be operated together or independently of each other and the control member is a four-button switch located on the steering column. The first section is the conventional red semaphore, another shows the letter R and the third the letter L, for right and left turns of the vehicle. The fourth section presents the word "Stop." The lower part of the lamp illuminates the license tag with a white light.

Moore Spark Plug Wrench.

J. C. Moore & Co., Racine, Wis., is manufacturing a spark plug wrench which comes in two parts, the wrench proper and a handle. The former is a double headed member, fitting .5-inch standard and .875-inch A. L. A. M. spark plugs. It is constructed of high grade material and by it plugs may be removed when an ordinary wrench could not be utilized.

Wolf Mixer.

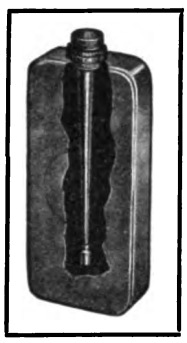
The present grade of gasoline marketed offers difficulty in vaporization and with the carburetor so adjusted as to make easy starting, the mixture is apt to be too rich at higher motor speeds. This is due to the unvolatilized fuel in the form of small globules being carried from the vaporizer to the cylinders. Not only is the gasoline wasted, but the richness of the mixture tends to create soot in the motor. To obtain efficiency from the engine the mixture should be uniform at all speeds. The Approved Auto Specialties Company, 1731 Broadway, New York City, is marketing the Wolf mixer, which is inserted in the intake manifold between the carburetor and the cylinders, and which is designed to break up the globules of fuel. This is secured through the construction of the device, which is free from screens or clogging members. The raw fluid is broken up and converted into a mist and mingled with the air by a whirling motion, created by the design of the mixer. This results in the utilization of less fuel, making for economy as well as maximum efficiency. The Wolf mixer is easily installed, being inserted in the intake pipe and without fittings of any kind. It is retained in position by a flange and will endure for an indefinite period of time.

Sparton Electric Horn.

The Sparks-Withington Company, Jackson, Mich., is making its Sparton electric horn in two models and each may be operated by any six or eight-volt battery, dry cells or a storage. A clear, penetrating signal is given by the Sparton, which comes complete with the usual length of flexible cord and push button. The horns are finished in polished brass, white nickel, black and nickel, black and brass, or all black, to suit the purchaser.

DOVER SPECIALTIES.

The Dover Stamping & Manufacturing Company, Cambridge, Mass., is marketing a number of useful and practical specialties which make for economy and convenience in the upkeep of the motor car. Among these is the Dover compact oiler, shown herewith, which is very handy for carrying in the tool box, etc. It is 6.5 inches long, three wide and 1.125 thick, and has a four-inch reversible spout.



Dover Oiler.

The Saval funnel will appeal to motorists who experience difficulty in replenishing the supply of lubricant to the motor, as the Dover is equipped with an automatic shut-off attachment, which enables the user to incline the measure and control the flow of lubricant. The spout has a brass ball valve, ground to an oil tight fit, and it is controlled by an easily operated and convenient plunger member.

The Dover soap economizer is a sturdily constructed pail with bail, and by the utilization of a perforated disc or pan, not only is waste of soap prevented, but the sponge is kept clean. The pail is filled with water and utilized in the same manner as an ordinary member. It is made of high grade material.

BRAKE LINING DATA.

Standard Woven Fabric Company, Maker of Multibestos Material, Issuing Free Booklet on Brake Linings.

The Standard Woven Fabric Company, Framingham, Mass., maker of the well known Multibestos brake lining, is issuing free a booklet on motor car brakes, which contains information of decided value to the repairman and garageman. The data are not merely a collection of statements, but replete with practical information on friction materials, and included therein is a series of tests showing how brake lining is affected in various kinds of service. The brochure is well illustrated and should be in the possession of all persons identified with the automobile industry. A copy will be mailed free of charge by filling out the coupon in the advertisement of the Standard Woven Fabric Company, which appears elsewhere in this issue.

LIBERAL DEALERS' POLICY.

Cataract Rubber Company to Protect Representatives and Makes Special Interesting Offer to Trade.

The Cataract Rubber Company, 66 Hereford street, Boston, with factory at Wooster, O., has prepared for an additional output of 50,000 tires during 1914. It also has decided to nationalize its product, which heretofore has been placed in New England with Boston as the distributing centre. Two years of conservative work proved the success of the company's policy; that of building a strictly high grade tire, in which the best material and workmanship was incorporated.

The Cataract Rubber Company believes that the jobber and dealer today are not handling standard tires on a marginal profit commensurate with the time, money and labor expended in representing a product for which there is such an unlimited demand. The company has, consequently, adopted a policy toward the dealer similar to that used by other successful manufacturers of standard commodities; one that will insure a splendid margin of profit to the dealer. The concern has decided that when a dealer or jobber builds up a certain percentage of total business in his territory in a year or two it is the duty of the company to back him up in years of success, and that he is entitled to the extreme margin of profit, the result of a protected price situation in the territory in which he is operating.

The Cataract Rubber Company is making a special offer, which includes a large discount on the list price, and the dealer or jobber handling its product is to receive every co-operation and price schedules are to be absolutely maintained.

OWNERS AUTO LIST COMPANY.

Supplies Certified Copies of Official Lists of Owners, Dealers, Garages, Repair Shops, Jobbers, Etc.

The Owners Auto List Company, Albany, N. Y., is prepared to supply the trade with certified copies of the official list of automobile owners, motorcycle owners, chauffeurs, dealers, garages, repair shops, dealers in tires and repairers, manufacturers, jobbers, etc., in the several states of the Union. The company lays great emphasis on the correctness of these lists, as well as their being up to date. A monthly service is also obtainable at a slight cost. The company will supply complete data upon request.

HEINZE MODEL T FORD COIL.

The Heinze Electric Company, Lowell, Mass., is manufacturing a special type of four-unit vibrating coil designed for service with the model T Ford flywheel generator. Owing to the special windings, vibrator and general construction, the maker guarantees its efficiency when used with the Ford ignition system. The vibrator is rapid and positive in its action the high efficiency of the coil is emphasized. The secondaries are wound in eight sections with one continuous wire, on a patented wood spool with double silk insulated wire. This permits, the maker states, of utilizing a greater number of turns than ordinarily. The method of winding also is held to eliminate the possibility of burning out or breaking down.

Heinze Four-Unit Ford Coil.

THE AUTOMOBILE JOURNAL THE MOTOR TRUCK

Offices in New York, Chicago, Detroit and Boston

SUBSCRIPTIONS.

The United States and Mexico, the year, $2 in advance; Canada and Foreign Countries in Postal Union, the year, $3 in advance. Twenty cents the copy.

CONTRIBUTIONS.

Anonymous communications not considered. Correspondence on subjects relating to the motor industry and the trade will receive attention. Stamps must be enclosed to insure return of unsolicited contributions.

ADVERTISING.

Information supplied at request.

Advertising Copy for the ACCESSORY AND GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

BUSINESS CONDITIONS.

The possibilities for the sale of automobiles, accessories, supplies and fittings are influenced by industrial conditions generally, just as with any other business. The money market is high, and the buying public is governed very largely in its expenditures by its ability to secure ready money. The situation applies to every line of merchandising and automobiles are very rapidly being placed in the merchandise list.

Some dealers, and some manufacturers, undoubtedly have failed to appreciate the changing conditions within the industry itself. Those who have taken advantage of the opportunity to investigate the matter will have little difficulty in arriving at the conviction that the automobile business as a whole is today on a much better basis than at any other time during its history.

The motor vehicle has become an economic necessity. It is no longer a toy. So far as the pleasure car is concerned, the element of luxury still remains, but the average business man who considers the purchase of a machine today, studies the proposition from a business viewpoint. The manufacturer and dealer are being forced to adopt the same position. This is particularly fortunate for the industry, since it makes for permanence and stability.

The men within the industry who have been able to readjust their business so as to meet the changed conditions are not experiencing any misgivings as to the immediate prospects for sales. It is not true that the dealers in the large centres of the country have helped to create the impression that times are hard. Most of them have been too busy with optimistic plans for the future to aid in any propaganda of this character. It is because of the good business sense of the men now engaged in the handling of cars and accessories that the stability of the automobile industry is doubly assured.

THE SALESMAN'S OPPORTUNITY.

Three years ago, the census figures show, there were 90,000,000 people in the United States. Probably, this total now exceeds 100,000,000. A year ago there were practically 1,000,000 automobiles registered in the several states. The figures of the Automobile Chamber of Commerce show that about 450,000 cars have been produced during the last 12 months. Many of these have gone abroad and some of the old cars have been taken out of service, but it seems safe to assume that there are in use today in America about 1,250,000 automobiles.

It would prove of interest to learn the exact percentage of people whose incomes are such as to permit them to own a car, who have as yet to purchase their first machine. A careful study of the local field should enable the dealer to discover abundant opportunities for business. It is possible to secure reliable data that will give the practical salesman sufficient information to work his territory in a systematic manner.

NOT HOW MANY? BUT HOW MUCH?

The dealer in New York City who recently inaugurated a system by which he was able to determine the actual value of his salesmen, in dollars and cents, was surprised to learn that the man who had been disposing of the most cars had cost the house the most money. That is to say: Salesmen who had fewer sales to their credit had made a satisfactory profit on each, while this man had been so intent upon making a big showing that used cars and discounts had figured so largely in the transactions as to net a substantial loss to the concern at the end of a given period.

Therein lies the importance of a system that will detect the leaks and afford an opportunity to prevent them. It is not the number of cars that are sold, but the margin of profit on each sale that overcomes the handicap imposed by overhead expenses and makes the difference between success and failure.

Digitized by Google

FOURTEENTH NEW YORK AUTOMOBILE SHOW.

SEVENTY makers of gasoline cars, six of electrics, five of cyclecars, 12 of motorcycles and 253 of accessories, supplies, parts and fittings will make display at the 14th annual national automobile show in the Grand Central Palace, New York City, Jan. 3-10. Statistics indicate that this will be the largest assemblage of motor cars ever seen under one roof in the Metropolis.

The event is to be held under the auspices of the Automobile Chamber of Commerce, and the management of Samuel A. Miles, who is well known throughout the industry, having been manager of all the automobile shows held in Chicago, although this is his first appearance in this capacity in connection with the New York display. The show committee is composed of Col. George L. Pope, H. C. Smith and Wilford C. Leland.

Samuel A. Miles, General Manager, New York Show.

Four floors will be devoted to the exhibition. Gasoline pleasure cars only will be staged on the main floor, while the second will house gasoline and electric cars. Cyclecars will be on the third floor and motorcycles on the fourth. On these the gasoline machines will occupy the wall spaces only, the remainder being given over to the exhibit of accessories. The display will be devoted solely to pleasure vehicles, and will be one week only.

The following list of exhibitors has been classified, alphabetically and according to the principal products shown by each, so far as it has been possible to learn these details in advance:

GASOLINE PLEASURE CARS.

A 23 Abbott-Detroit—Abbott Motor Co., Detroit, Mich.
D 14 Allen—Allen Motor Co., Fostoria, O.
A 2 Apperson—Apperson Bros. Auto Co., Kokomo, Ind.
B 17 Auburn—Auburn Auto Co., Auburn, Ind.
A 15 Buick—Buick Motor Co., Flint, Mich.
A 11 Cadillac—Cadillac Motor Car Co., Detroit, Mich.
D 13 Cameron—Cameron Mfg. Co., West Haven, Conn.
B 28 Cartercar—Cartercar Co., Pontiac, Mich.
B 22 Case—J. I. Case T. M. Co., Racine, Wis.
A 17 Chalmers—Chalmers Motor Co., Detroit, Mich.
C 5, 6 Chandler—Chandler Motor Car Co., Cleveland, O.
A 14 Cole—Cole Motor Car Co., Indianapolis, Ind.
C 10 Davis—Geo. W. Davis Motor Car Co., Richmond, Ind.
C 21 Empire—Empire Automobile Co., Indianapolis, Ind.
B 15 Fiat—Fiat Automobile Co., Poughkeepsie, N. Y.
A 29 Franklin—H. H. Franklin Mfg. Co., Syracuse, N. Y.
B 2 Garford-Knight—Garford Co., Elyria, O.
B 5 Great Western—Great Western Auto Co., Peru, Ind.
C 11 Havers—Havers Motor Car Co., Port Huron, Mich.

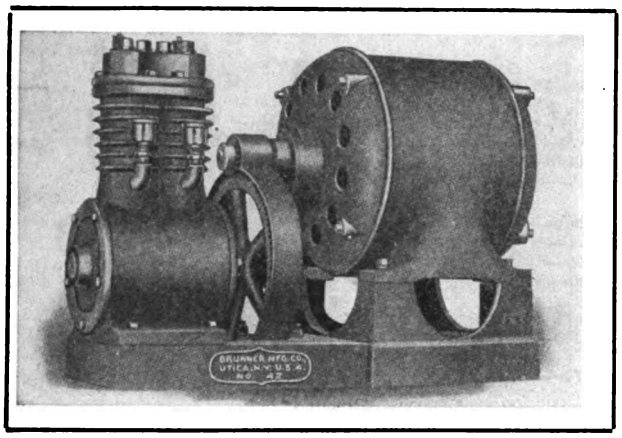
GARAGE AND REPAIR SHOP EQUIPMENT.

MOTOR driven air compressors are now considered standard equipment in the garage, repair shop and service station, the design varying according to the service required. The Brunner Manufacturing Company, Utica, N. Y., is producing a number of different types, that shown in the accompanying illustration being adaptable to many varying classes of service. The complete outfit is self-retained and operates with so little vibration that it can be installed, if desired, without fastening to the floor.



Parker Double-Cylinder Motor Driven Air Compressor.

The No. 42 Parker outfit, as it is termed, comprises, in addition to the motor, a double-cylinder vertical compressor with cylinders having a bore of 1.825 inches and stroke of 2.5. The guaranteed pressure with a standard motor is 130 pounds to the square inch, although the compressor can be fitted for higher pressures upon order.

Lubrication is by the splash system and the motor bearings are oiled by ring oilers on the shaft. The height is 16.5 inches and the floor space required is 18.5 by 11 inches. The net weight is 170 pounds; shipping weight, 200.

Energy is supplied by a .5 horsepower electric motor, and drive is by a cast iron spur gear and a rawhide pinion. The compressor is driven at a speed of 350 revolutions a minute, and has a capacity of 4480 cubic inches (2.5 cubic feet) of free air a minute. The outlet is tapped for a .25 inch iron pipe. The finish is gloss black enamel. The motor is a direct current machine or single-phase alternating current, 110 or 220 volts. Motors of any frequency on alternating current are supplied at an extra cost.

The outfit can be made automatic with an electric controller and any desired pressure can be maintained day or night without any other attention than an occasional oiling. Two types of controllers are shown in an accompanying illustration, that at the left being designed for service with single or two-phase alternating current motors of two horsepower and less. The No. 91 is shown at the right and is similar to the other, but has a rheostat for all direct current motors and such alternating current motors as require starting resistance or a rheostat.

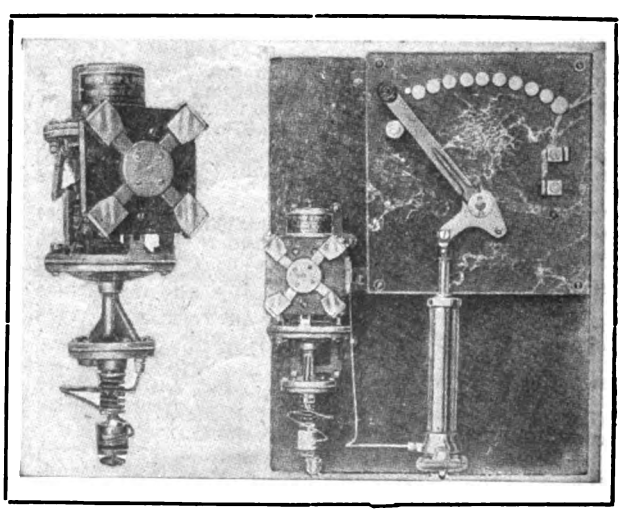
As previously stated these controllers maintain a constant air pressure at all times and are stated to be extremely accurate and reliable. They can be adjusted for operation on a wide variation of pressure, or set to start and stop the motor within a variation in the tank pressure of two to three pounds, if desired. The construction is simple, only two diaphragms being used, these presenting such a small portion of their area to the pressure that they are practically wear proof. The contact points are of the wiping variety, insuring a clean surface at all times, and eliminating sparking.

The Brunner Manufacturing Company is issuing a new catalogue illustrating and describing air compressors, which will be mailed free.

CARVER ELECTRIC GRINDER.

The American Electric Tool Company, West Newton, Mass., maker of Carver portable electric tools, is manufacturing a grinder operated by electricity constructed in three types, each of which may be moved around the shop if desired, although heavy enough to permit of their operation without being secured. The base is very substantial and a special feature, to which the maker calls attention, is the casting of the water pot in the base. The last named part is sufficiently wide to prevent tipping when the work of grinding is started.

Types A. G. B. L. and G. B. 1 carry a grinding wheel six by .375 and .5 inch respectively and turn at 3500 revolutions a minute. The first named model is employed with an alternating current; the G. B. 1 and G. B. 2 with direct. The last named employs a .75-inch wheel, eight inches in diameter, and runs at 2500 revolutions a minute. It also is provided with two wheels, one at either end, and two tool rests and wheel guards.



Electric Controllers Which Are Utilized with Parker Air Compressor Outfits.

The company issues a catalogue illustrating and describing its equipment, which will be mailed free on request.

HOYT FORD MAGNETO TESTER.

The Hoyt Electrical Instrument Works, Penacook, N. H., well known maker of current testing devices, is manufacturing the Hoyt Ford magneto tester, shown in an accompanying illustration. As the name implies, it is designed to show the quality of the electricity generated by the flywheel magneto on model T Ford motors, and the dial of the instrument is calibrated. The meter is compact, being 3.5 inches in diameter, and is constructed of the same high grade material and with the same careful workmanship for which the product of this concern is noted.

Hoyt Ford Magneto Tester.

One of the most difficult troubles to locate with the Ford motor is the ignition, and many times weak magnets are the cause of the cylinders heating and lack of power. The Hoyt company conducted a series of tests with 100 cars, the experiments extending over a period of 12 months, and it was found that almost invariably a magneto which indicated below a certain point of the scale would not operate continuously without skipping, and that at another point, while operating without skipping, the gasoline consumption was higher.

For the purpose of simplifying the use of the Hoyt magneto tester these two points were indicated as "Poor" and "Medium". The lowest point of efficiency, that is, the point at which the motor would operate without skipping and with reasonable fuel consumption, was indicated on the scale as "Fair". A small percentage of cars tested showed as high as "Good", while a few tested "Extra". Very satisfactory results were obtained from motors testing between "Fair" and "Good", while rather indifferent results were obtained from those cars testing below "Medium".

The test is made easily. The device is provided with two cables, and either one may be utilized in connection to the magneto terminal. The remaining lead is grounded. The motor is started, operated as slowly as possible without skipping and the position of the needle of the tester noted. It should indicate "Poor" and "Fair" when the motor is raced for a minute. The quality of the current at predetermined speeds is read easily on the dial, enabling the workman to tell at a glance the condition of the magneto.

GENTER'S METALLIZED PAINT.

The J. H. Genter Company, Inc., Newburgh, N. Y., is marketing a metallized glass paint which is intended to withstand extreme high temperatures. It is stated that the three shades of copper will successfully survive a heat of 900 degrees Fahrenheit, and at the other end of the scale come black, brown and red, which, it is claimed, will remain unaffected under a heat of 2200 degrees.

LINDHE SHIMS.

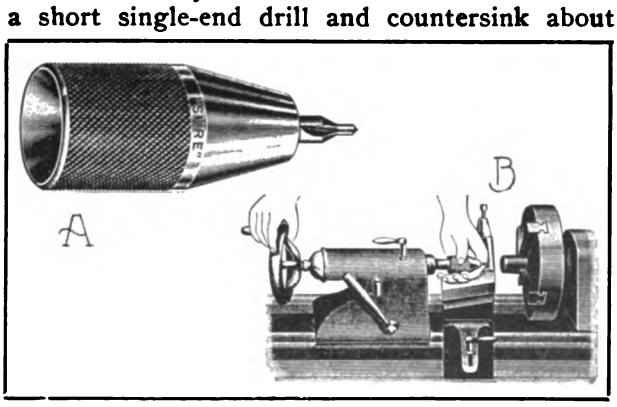
The Lindhe Shim Company, 212 Canal street, New York City, is marketing the Lindhe shims in two new sets. The first is known as the No. 1 and comprises one strip, .03125 by two by nine inches (all .002 inch laminations); .0625 by two by nine inches; .125 by two by nine inches; the last two named are half .002 inch laminations and half solid brass. The second set consists of similar sizes, excepting the laminations are .003 inch. By combining these different pieces almost any thickness of shim can be obtained.

FORD FELT WASHERS.

N. E. Booth, 644 Pacific street, Brooklyn, N. Y., maker of felt washers, gaskets and packings, is manufacturing a special felt gasket for insertion between the engine base and crankcase of model T Ford motors. The gasket comes in shape for immediate use and with all the bolt holes punched in it.

SURE CENTRE FINDER.

The West Haven Manufacturing Company, New Haven, Conn., is producing the Sure centre finder, a new lathe tool, shown in an accompanying illustration. It has a socket that fits on the 60-degree angle taper of centre in the tail stock of the lathe, and when held in that position and fed up to the work held and revolving in the chuck, it immediately locates the centre. The friction of the centre finder on the lathe centre is sufficient to hold for drilling and countersinking, enabling the workman to make the three operations without change or use of any other tool. The fingers need do little more than steady the tool. Each centre finder is sent out with a combination drill and countersink, which are stock sizes with many makers. The Nos. 0 and 1 have a short single-end drill and countersink about



West Haven Sure Centre Finder: A, the Finder; B, Method of Use.

half the length of the double-end ones on the market, for the sake of compactness, but the double-end ones may be used however.

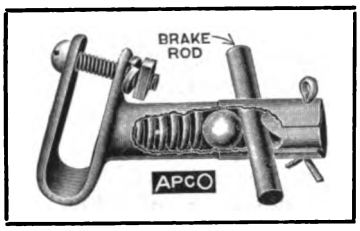
TWO NEW APCO ACCESSORIES.

Maker of Ford Specialties Brings Out Brake Rod Support and Device Termed Speederup.

The Apco line, manufactured by the Auto Parts Company, Providence, R. I., maker of Ford specialties, has been augmented by two new accessories, one of which fills a long felt want upon the part of owners of the model T Ford car. The Apco brake rod support is stated to be the only one of its kind that can be attached to the car without displacing the brake rod and an accompanying illustration shows the simplicity of the design. The brake rod is prevented from rattling or vibrating by a steel ball and plunger, these providing a bearing, the tension of which is automatically regulated by a coil spring. Normally the rod is held firmly, but in service it moves easily and without friction because of the ball bearing.

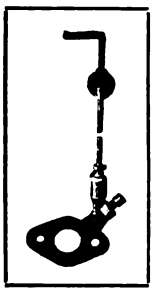


Apco Brake Rod Support.

The Apco brake rod support can be attached in a few minutes, the only tool utilized being a screw driver for tightening the clamp to the radius rod. To attach, the screw bolt is removed, also the cotter pin and plunger. The support is then slipped over the radius rod and the retaining bolt tightened. Replacing the plunger and cotter pin is accomplished easily as the parts are accurately designed and finished. The brake rod supports are constructed of bronze and as the ball bearing, etc., are fully enclosed, the working parts are not affected by dust, etc. They come in sets of two and retail for $2.

Speederup.

Speederup is the latest Ford accessory. It permits the driver to regulate and control an auxiliary supply of air to the mixture, obtaining maximum efficiency from the fuel and without changing the original setting of the carburetor. It comprises a metal flange, which is inserted between the inlet pipe and the carburetor, and, as will be noted by the accompanying illustration, the flange is in the shape of a gasket. A cored passage communicates with the opening of the flange, which is provided with a threaded extension having an opening. Over the threaded member is screwed a cap, which is rotated by a rod extending through the dash and with a handle for operating the cap member. The last named is perforated. By rotating the rod the hole in the cap is made to register with the aperture in the extension of the flange, permitting air to be drawn into the intake manifold. The fine thread utilized on the extension permits of a close regulation of the air supply. The flange member is accurately made and is fitted by displacing the two bolts retaining the carburetor, inserting the flange and replacing the bolts. The Speederup also has an opening for introducing a decarbonizer, a screw plug being used as shown. The new accessory operates on the well known principle of introducing auxiliary air into the intake pipe to break up and convert into useful vapor any particles of fuel not vaporized by the carburetor. It also permits the driver to obtain more mileage from the fuel by adjusting the supply of air to conform with climatic changes, etc. The Speederup retails for $2.



Speederup.

G. B. OXYGEN CARBON REMOVER.

G. B. Sales Corporation Marketing Outfit Selling for $10. —Has No Gauges and Is Self-Regulating.

The G. B. Sales Corporation, 1790 Broadway, New York City, is marketing the G. B. oxygen carbon remover equipment, which is a simple apparatus having but few parts. One of its qualities is its self-regulating feature, the maker stating that too much or too little oxygen cannot be utilized and that in addition to making for economy maximum efficiency is obtained. Gauges and adjusting mechanism are eliminated and the equipment is easily operated.

The materials employed are strictly high grade and the company guarantees the apparatus to do the work as well as any in the market. The carbon is consumed by the action of the oxygen and, as is characteristic with the process, does not injure the metal of the cylinders, pistons or valves.

The G. B. oxygen carbon removing apparatus lists for $10, a price within the reach of the smallest garage and repair shop. The advantages of the process have long been recognized and indorsed by the trade.

DEALER BECOMES MANUFACTURER.

Gramm Agent on Pacific Coast to Produce Trucks on Its Own Account.

Arrangements have been completed by the Klieber Company, San Francisco, Cal., to manufacture trucks on its own account in its home city. Plans have been made to build 100 cars during the 1914 season, each one of which will be equipped with a Continental engine.

The officers of the company, which for several years has successfully handled the Gramm trucks, are: President, Paul Klieber; vice president, W. M. Remensperger; second vice president, E. Kleiber; treasurer, P. E. Rathjens; secretary, Otto T. Suden.

ANOTHER ROTARY VALVE MOTOR.

New Concern Locates in Marshfield, Wis., and Will Produce Engines of This Type.

The stockholders of the recently incorporated Augustin Rotary Valve Engine Company, Marshfield, Wis., have perfected a permanent organization by the election of the following officers: President, Dr. G. E. Harrington; vice president, Charles R. Herrick; secretary, Henry E. Hoerl; treasurer, R. J. Strauss.

The purpose of the new company is to manufacture and develop a new type of internal combustion engine and a factory has been located at Marshfield, Wis. The incorporators are R. J. Strauss, Dr. G. E. Harrington and H. E. Hoerl, and the capital stock is $10,000.

The Thompson-Carroll Company, Leader-News building, Cleveland, O., has issued a neat little brochure calling attention to its appearance in the advertising agency field. The concern is composed of the following: Clyde S. Thompson, formerly advertising manager of the Diamond Rubber Company, and more recently connected with large advertising agencies in New York and Cleveland; George A. Schneider, formerly connected with Cleveland newspapers; Charles F. Carroll, municipal contractor; L. Z. Stone, for two years in charge of the advertising department of the B. F. Goodrich Company, and Fred S. Tuerk, for several years in charge of the copy department of the Western Electric Company.

AKRON-WILLIAMS

Proved-By-Test Equipment

MEN, the first essential in the Tire Repair Business is first quality, proved-in-practice Equipment.

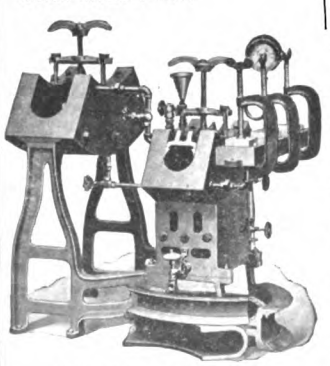
You can't afford to experiment with uncertain Equipment. That is apt to ruin your business, ruin your customers' tires and tubes, and cost you a new Equipment.

You take no chance when you buy Akron-Williams—you are not experimenting. Akron-Williams Repair Equipment and Tools are all "Proved-By-Test," before we offer them to the trade.

Some Akron-Williams Users

Firestone, Goodyear, Diamond, Hartford, Republic, Pennsylvania, Revere, Consolidated, Empire, U. S. and Hood are some of the 27 leading Tire Makers using our equipment.

You are safe in using what these makers use.



One of a dozen styles

Localized Steam

The three distinct and separate steam chambers of Akron-Williams Repair Outfits is an important feature. That insures heat just where wanted, prevents over-curing, and insures efficient work.

Let's Talk It Over

If you are going to enter this profitable business—Tire Repairing—write us and let's talk it over. There are many reasons why you should buy Akron-Williams equipment, and we'll be glad to show you why.

Get our valuable book—Catalog No. 12. It's full of expert information. Write for it now.

DIXON'S GRAPHITE GREASE No. 677

For Transmissions and Differentials

Use this on your automobile—or motor truck—and note the difference in the running qualities. More engine power acts as driving power—less as "wearing-out" power destroying the gears. The secret is in the special finely ground Ticonderoga Flake Graphite mixed with the pure mineral grease. The theory and practise of auto lubrication are presented in booklet No. 49 "Lubricating the Motor," sent on request.

The Atwater Kent Ford Ignition

does more than eliminate the frequent and troublesome adjustment of the Ford coils.

The Atwater Kent Ignition assures perfect synchronization at all speeds, eliminating preignition and overheating—starts easily with a quarter turn of the crank and frequently without cranking by means of the starting button on the coil.

Effects a saving in gas, wear and vibration by enabling the motor to run slowly while the car is standing and run as smoothly on "high" at four miles an hour as at thirty or fifty.

The Atwater Kent will, in addition, wonderfully increase the power, speed, flexibility and hill climbing ability of the Ford car, and gives superior results and costs less than half that of the high tension magneto.

It consists of the Unisparker or distributor elevated to a convenient and accessible position which takes the place of the Ford timer and a single non-vibrating coil is installed in place of the four vibrating coils.

It is easily installed by any one who can time a motor—no holes to bore—a screw driver and wrench are the only tools required.

Price complete with hand-operated switch $28.00—foot-operated switch $2.00 extra.

Write at once for Circular "L" and trade prices.

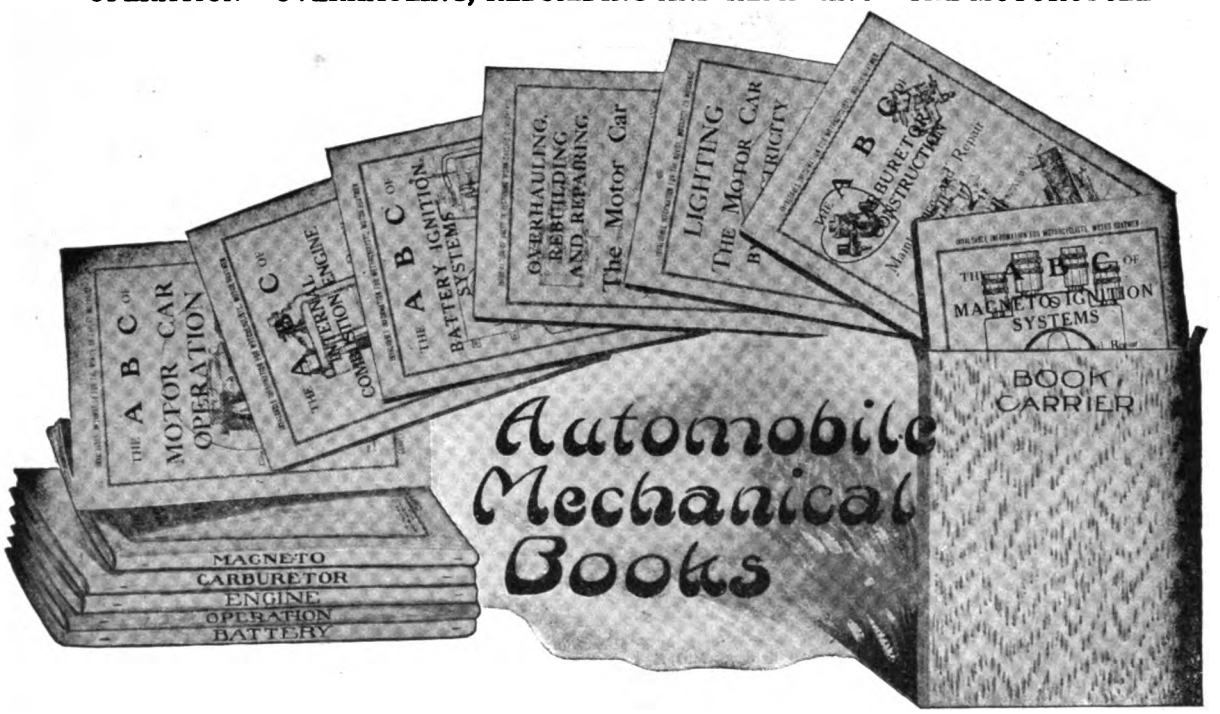
Knowledge Brings Position and Money

The ambitious man uses the knowledge acquired by others. He starts where they leave off. For a small amount—but a little more than a day's pay—you can purchase a lifetime of practical experience and knowledge of the best known authorities on Automobile Mechanical Subjects. Can Garagemen, Representative Dealers, Accessory Men or Mechanics employed by them afford to overlook this opportunity? You must have this knowledge and experience—you need it every day in your business. The call may be today for it—if not, it is sure to come tomorrow. With these books in your possession you can meet it.

10 Automobile Mechanical Books 10

ENGINE—MAGNETO—CARBURETOR—BATTERY—ELECTRIC LIGHTING—TIRES—CHASSIS —OPERATION—OVERHAULING, REBUILDING AND REPAIRING—THE MOTORCYCLE



A Library and Reference of Mechanical Information

800 Pages of Text—1500 Illustrations—Half a Million Copies Sold Annually.

Knowledge of cars means increased salary for all who have the ability to properly repair and adjust them. The practical instruction that you need is to be found in these books, and to acquire the same fund of information in any other manner would require years of constant study. You must understand all motors if you would adjust or repair them. The subject is fully treated in the Engine book. This applies as well to the Magneto, Carburetor, Battery, Lighting, Chassis and Tire books. When overhauling and rebuilding, read that discussion. The book on Motor Car Operation covers that subject with reference to all cars. No matter what the need, there is a book to meet it. No car or component is neglected, and all standard engines, magnetos, carburetors, batteries, lighting systems and vehicles are dealt with. The full set includes:

Engine	$ .35	Motor Car Tires	$ .35	Magneto	$ .35
Carburetor	.35	The Motor Car Chassis	.35	Motor Car Operation	.50
Lighting by Electricity	.50	Motorcycle Construction, Care and Repair	.35	Overhauling, Rebuilding and Repairing	.50
Battery	.35				

Full Set, 10 Books.....$3.75

PANHARD OIL

Dealers' Oil Bulletin No. 2

Pennsylvania Crude Oil makes the best gas-engine lubricants. Everyone acknowledges this. It is a pure paraffine base. Practically all other crudes contain a percentage of asphalt.

Pennsylvania yields not over 10% of the crude oil produced in this country today. Many of the so-called "Pennsylvania" oils will bear watching. Because of its higher quality and comparative scarcity, its products are more expensive. During the past two years the crude itself has doubled in price.

Most dealers are paying no more for oil today than they did years ago; some pay less. There is only one answer; less quality. Will it pay in the end?

Panhard Oil is and always has been a Pennsylvania product. It has stood at the top since 1904. We help you advertise it among your own customers, where you will be benefited most. Think this over while you are making plans for the coming season, and let us hear from you now.

VOL. III. PAWTUCKET, R. I., JANUARY, 1914. No. 9

SITUATION PRESAGES A PROSPEROUS YEAR.

Business Conditions as Reflected by the Shows---New Records in Attendance ---Many Sales Reported.

BUSINESS conditions in the industry throughout the country, as reflected by the New York national show and the local dealers' displays in widely separated sections, are particularly encouraging. Manufacturers and dealers have awaited these exhibitions this year with more than ordinary interest, and the results thus far reported are such as to inspire confidence in the possibilities for sales during 1914.

The attendance at New York was larger than ever before, and reports from the manufacturers who made display, indicate that much better business was realized than has been true in any recent year. It is anticipated that a similar experience will result at the Chicago show, Jan. 24-31.

Immediately following the New York display, local shows were held in Philadelphia, Detroit, Bridgeport, Baltimore, Washington, Cleveland, Milwaukee and Los Angeles. Reliable information from each of these centres sets forth that new records in attendance were created in every instance. Cleveland reports sales aggregating $1,000,000. Detroit and Milwaukee found the business men particularly interested in commercial vehicles. Bridgeport dealers sold 100 cars during the week. The enthusiasm of the purchasing public in the other cities mentioned was such as to make the dealers most optimistic as to the future.

Big Combination of Electric Vehicle Manufacturers---Argo, Borland and Broc Models Affected.

One of the most important announcements of the electric vehicle industry in recent months is that concerning the formation of the American Electric Car Company of Chicago, capitalized for $1,500,000. It is understood that the new company will take over the product of the Argo Electric Vehicle Company, Saginaw, Mich., the Borland-Grannis Company, Chicago, and the Broc Electric Vehicle Company, Cleveland, O. The officers are: President, F. A. Brand; vice presidents, Fred Buck, Bruce Borland and U. B. Grannis; secretary-treasurer, Theodore Huss. Each of the three constituent concerns is represented on the executive board and on the board of directors.

The details of the plan have not been made public sufficiently to determine definitely whether the new company will take over the manufacturing of the cars heretofore produced by the makers of the Argo, Borland and Broc. It is stated, however, that the three names will be retained, and, presumably, the various models will be continued, at least for the present.

As announced recently, there will be three Argo pleasure car models for 1914, six Borland and six Broc. In addition there are two Argo commercial vehicles, and it has been rumored that there is a possibility of electric trucks being produced under the Borland name.

MOLINE-KNIGHT ENGINE IN RECORD TEST.

A Moline-Knight engine, made by the Moline Automobile Company, East Moline, Ill., was turned over to the laboratory engineer of the Automobile Club of America in New York City, Dec. 19, to undergo an official test, covering two weeks of continuous running. The 336-hour test came to an end Jan. 2 and the motor was run an additional hour at a higher rate before being completely disassembled to learn the condition of its components.

During the original test the motor was run at a crankshaft speed of 1117 revolutions a minute, at which it showed an average horsepower reading of 38.3. In the subsequent run the engine

Digitized by Google

was speeded up to 1682 revolutions, at which it developed 53.6 horsepower. The rating of the engine under the S. A. E. formula is 28.16 horsepower.

Concerning the condition of the motor at the completion of the test, the official report reads as follows:

There was no perceptible wear on the bearings, sleeves or other parts. The slight irregularities in the sleeves were built up with carbon to form close-fitting, glossy surfaces. The ports in the sleeves were not burnt, and there was only a very slight deposit of carbon on the port edges. The cylinder heads and the tops of the pistons showed only a very thin coating of carbon, and only small quantities were found elsewhere. No shake could be felt in any bearing, and there was every indication of perfect lubrication. There was not a single ring in either piston or cylinder head which was not perfectly free at the end of the test. The running of the motor as regards noise and vibration was not appreciably different at the end of the test from that at the start and early hours.

The carburetor employed was a 1.5-inch, nominal size, model R Schebler, which has a tapered needle whose position in the nozzle is controlled, through a lever connection, by the position of the air valve. No changes in the carburetor setting were made during the endurance test.

Ignition was furnished by a Bosch DU model 4A Duplex magneto. Four Bosch plugs with heavy three point electrodes were put in at the start of the test, and none of these was taken out of the cylinder or otherwise disturbed until after the endurance test was completed. The electrodes were partly burned away, so that the gap was increased, but the regularity of firing was noticeable throughout.

BRISCOE MOTOR COMPANY.

Organized in New York City and Cars Will Be Produced in Factory at Jackson, Mich.

The Briscoe Motor Company was organized in New York City, Jan. 6, to handle the American production of the Briscoe car, made by Briscoe Freres, Paris, France. The latter concern is composed of Benjamin and Frank Briscoe, who are already well known to the American automobile industry, through their connection with the old Maxwell-Briscoe Motor Company, the United States Motor Company, and a number of other concerns.

Horace DeLisser, President, Briscoe Motor Company.

About the same time it was announced that a contract had been entered into between the Briscoe Motor Company and the Lewis Spring & Axle Company, Jackson, Mich., under the terms of which the Briscoe car will be produced by the latter company. The officers of the Briscoe Motor Company are: President, Horace DeLisser, formerly associated with Benjamin Briscoe in the United States Motor Company, the former as vice president and the latter as president, and now with the Ajax-Grieb Rubber Company; vice president, W. F. Smith; secretary and treasurer, L. E. Latta.

TO PRODUCE KEETON CARS.

American Voiturette Company Assumes Manufacture of Large Machine.

Announcement is made by Charles B. Shaffer, president of the American Voiturette Company, Detroit, that it has completed arrangements with the Keeton Motor Company of that city, whereby the Keeton cars will be produced by the former concern in the future. It is understood that outward appearance and name of the Keeton will remain unchanged, while the mechanical construction and details will be given every consideration consistent with sound engineering practise.

The American Voiturette Company was organized early last year for the purpose of producing the Car-Nation, in three models. This machine has been classified as a cyclecar, insofar as the two two-passenger models are concerned, but it is also produced as a touring car. Many of those interested in the manufacture of the Keeton machine were connected with the other company, although some of these withdrew from the older concern last summer.

Mr. Shaffer was a minority stockholder in the Keeton company. The other officers of the American Voiturette Company are: Vice president and general manager, W. H. Newsom; secretary and treasurer, C. B. Lewis; assistant secretary and treasurer, C. P. Jones.

It is explained by Mr. Shaffer that, owing to the fact that the field for a car of the class and type of the Keeton is somewhat limited, it has been decided best to have it made in conjunction with the Car-Nation. He adds that the company will build a limited number of the new Keetons for the 1914 season, but every one of them will be of the quality and construction that makes a car a continual source of pride and satisfaction to the owner.

OPENS CINCINNATI BRANCH.

Auto Parts Company Adds Another Distributing Station in Charge of Vice President Wilson.

The Auto Parts Company, Providence, R. I., maker of the well known Apco Ford specialties, announces that it has opened a distributing branch at 806 Race street, Cincinnati, O. This is the heart of the automobile district in that city, and the branch will be in charge of John Wilson, Jr., a vice president of the concern.

The Apco line is one of the most comprehensive manufactured in this country, embracing practically every accessory that makes for the comfort of Ford owners, and the wide distribution of Ford cars throughout the country has impelled the company to adopt this method of serving the public. Branches also have been established in Boston, Philadelphia, Chicago, Los Angeles and San Francisco. The officers of the Auto Parts Company are: President and treasurer, Thomas F. Wilson; vice president, John Wilson, Jr., and secretary, William M. Wilson.

SPARK PLUG ORGANIZATION.

Forty Manufacturers Meet for This Purpose During New York Show.

One of the important gatherings during the week of the New York automobile show was that of some 40 manufacturers of spark plugs, which was called at the instance of A. R. Mosler, president of A. R. Mosler & Co., Mount Vernon, N. Y. The meeting followed a banquet at the Hotel Astor, at which the guest of honor was William A. Redding, patent attorney, and the chief topic of discussion was the recent decision respecting the so-called Canfield spark plug patent.

A second meeting will be held in the near future for the purpose of completing the organization of the spark plug manufacturers, and to this end the following committee was appointed: D. B. Mills, Rajah Supply Company; Albert Champion, Champion Ignition Company; R. A. Stronnehan, Champion Spark Plug Company; David Smith, Standard Company; E. H. Schwab, Silvex Company, and Otto Heinze, Bosch Magneto Company.

It is expected that the organization will be composed of manufacturers licensed to produce spark plugs under the Canfield patent, which is owned by the Mosler company. It is stated that 23 leading manufacturers already hold such licenses.

CONNERSVILLE CONCERNS UNITE.

Makers of Howard and Lexington Cars Combine Under New Charter.

A certificate of incorporation has been filed with the secretary of state in Indianapolis, Ind., for the Lexington-Howard Company of Connersville, with capital of $150,000. It is understood that this is the result of a combination between the Howard Motor Car Company and the Lexington Motor Car Company, and that the new concern will produce both the Howard and the Lexington cars.

The directors of the new company are E. W. Ansted, J. E. Huston and F. I. Barrows.

GENERAL NEWS OF THE MANUFACTURERS.

The Folberth Auto Specialty Company, Cleveland, O., has completed its new building at Lake avenue and West 80th street, and now has a thoroughly modern plant. The firm is composed of F. W. and W. L. Folberth, who have been identified with the automobile industry for some time. Their father is a motor car manufacturer in Germany. The company intends to specialize in foreign car service and is patentee of the Folbert tire pump and the Folberth carburetor.

The Jones Electric Starter Company, Chicago, Ill., manufacturer of the Jesco electric starting and lighting system, announces the opening of the Jesco Equipment Company, New York City, as its eastern sales, service and installation representative. This company occupies the eighth floor of a building at 245 West 55th street, just off Broadway. George W. Wacker, formerly in charge of the Simms Magneto Company's plant at Bloomfield, N. J., is general manager, and F. E. Moskovics, secretary of the Jones Electric Starter Company, is president.

The Heinze Electric Company announces the opening of a New York sales office and service station at 1876 Broadway, under the management of P. G. Sedley. This branch will carry in stock a complete line of coils and coil parts for Ford cars, carburetors and spark plugs, together with a full line of ignition apparatus, and in addition will be thoroughly equipped for the prompt and efficient repairing of same.

The Knight Tire and Rubber Company, Kansas City, Mo., has opened a branch at 1528 Grand avenue, in charge of H. C. Hess.

The Champion Ignition Company, Flint, Mich., has brought suit against the Champion Spark Plug Company, Toledo, O., to restrain the use of the name Champion and also alleging infringement on the Flint company's plug patents.

The Hastings Motor Shaft Company, Jackson, Mich., has been reorganized and refinanced. The name has been changed to the Jackson Motor Shaft Company and new additional preferred stock has been issued. The new officers elected are: President and general manager, L. E. Bloomfield; vice president, Winthrop Livingood; treasurer, John L. Allen; secretary, F. H. Lewis.

The Monroe Body Company, Pontiac, Mich., manufacturers of automobile bodies, has taken a lease of the plant of the late Pontiac Turning Company, and has already started alterations to properly equip the building. The plant will be used for assembling bodies. The additional room will enable the concern to materially increase its output.

The Sireno Company, Inc., 18 Rose street, New York City, manufacturer of signal horns and accessories, has been elected to membership in the Motor & Accessory Manufacturers.

The Premier Motor Manufacturing Company, Indianapolis, Ind., has increased its capital stock from $1,250,000 to $1,750,000 at a special meeting of the stockholders, and a bond issue of $250,000 was also authorized. This additional working capital will put the Premier Company in a position to take care of its rapidly growing business.

The Long Manufacturing Company, Detroit, Mich., manufacturer of automobile parts, has increased its capital from $300,000 to $400,000. J. L. Dryden is secretary.

The Great Western Manufacturing Company, Laporte, Ind., has taken over the patents and manufacture of Lindsay wire wheels for automobiles, which were formerly made by the Lindsay Automobile Parts Company, Indianapolis.

The Ford Motor Company, Detroit, Mich., has bought from the Ohio River Sand Company a plot of ground on the Southern & Louisville tracks at Third street, Louisville, Ky., and will begin immediately the construction of an assembling plant at a cost of approximately $200,000. The plant will employ between 200 and 300 men and will be used to supply the trade in this section.

The National Tire & Rubber Company, East Palestine, O., has started operations on its new two-story reinforced concrete steel factory, which is to cost $75,000.

The Timken-Detroit Axle Company, Detroit, Mich., is having another large addition made to its factory. The new building will be on Clark avenue.

The Stewart Warner Speedometer Corporation, Chicago, has opened seven new direct factory branches and 50 new service stations in all parts of the country. The new factory branches are located in St. Louis, Kansas City, Minneapolis, Los Angeles, Atlanta, Pittsburg and Philadelphia. The complete Stewart organization now comprises 15 factory branches and 103 dealers' service stations, including depots in London, England; Christchurch, New Zealand; Edmonton, Canada; Montreal, Canada; Hamburg, Germany; Paris, France; Sydney, Australia, and Johannesburg, South Africa.

The Batavia Rubber Company, Batavia, N. Y., has completed plans to erect an addition 101 by 85 feet, three stories high, providing 25,000 square feet of additional floor space. The structure is to be of steel and brick.

The Knight Tire and Rubber Company, Canton, O., has commenced the erection of two new buildings, three stories high, 75 by 125 feet, and one building two stories high, 55 by 125 feet.

The Housel Manufacturing Company, Rochester, N. Y., manufacturer and distributor of automobiles and supplies, has finished its new factory building and all new machinery has been installed.

The Dile Motor Car Company, Reading, Penn., is having a factory built in that city for the manufacture of Dile cars. The company will locate at 10th and Chestnut streets.

The Ravenna Motor Truck Company, Ravenna, O., will soon select an architect to prepare plans for a cement block factory addition, 50 by 100 feet. The work will mature in the spring.

The Thomas B. Jeffery Company, Kenosha, Wis., is building another addition to its works, which now cover 25 acres, with 105 acres in which to expand. This building will contain approximately 2.25 acres of floor space and will be of standard saw tooth construction. A force of 200 men is working on this structure.

The Adams Bros. Company, Findlay, O., held its annual meeting Jan. 13, at which the following officers were elected for the ensuing year: President, Joseph J. Kivis; vice president, C. H. Bigelow; secretary, L. J. Adams; treasurer, B. B. Bigelow; purchasing agent, D. B. Adams; sales manager, J. T. Adams; general manager, W. D. McCaughey. The company reports a good business for the past year and is now busy filling 1914 orders for Adams trucks.

O. J. Rohde, vice president and general manager of the Splitdorf Electrical Company of New York, is one of the best informed electrical experts in the country, and his experience has been such as to make him well fitted for his position. He was one of those who was directly responsible for the new Splitdorf Ford Special water proof high-tension magneto, which has occasioned such widespread interest during the present show season.

O. J. Rohde, General Manager, Splitdorf Electrical Company of New York.

The Detroit Seamless Steel Tubes Company, Detroit, Mich., is building a tube rolling mill.

The Keystone Mobile Car Sign Company will locate a factory in Frederick, Md.

The Hood Rubber Company, Boston, Mass., has sold the entire $500,000 of preferred stock issued by directors, without any commission or underwriting, netting the company par.

The Gallagher Carburetor Company, Inc., 1876 Broadway, New York City, has purchased the Edwards & Smith Company's foundries at Easton, Penn., and will operate under the name of the Lehigh Valley Foundries & Manufacturing Company, with head office in Easton.

The Standard Welding Company, Cleveland, O., has taken up the manufacture of wire wheels for automobiles in addition to the production of rims for motor-driven vehicles.

The Pennsylvania Rubber Company, Jeannette, Penn., has opened its new eastern branch at 1889 Broadway, New York City. The building provides 6000 square feet of floor space and extends from Broadway to Columbus avenue. The basement is to be used for shipping and adjustments. C. C. McCullough is manager.

The Dominion Tire Company, Berlin, Ont., has opened its new factory, constructed of reinforced concrete, one of the largest buildings of its character in Canada. The directors of the company are: D. Lorne McGibbon, Col. S. P. Colt, Victor E. Mitchell, Elisha S. Williams, A. J. Kimel, Homer E. Sawyer and T. H. Reider.

The Puritan Machine Company, Detroit, Mich., has opened a department for furnishing repair parts for the Michigan car, made by the Michigan Motor Car Company before its suspension. E. D. Edwards, formerly purchasing agent of the Michigan company, has been placed in charge.

The H. W. Johns-Manville Company, New York City, has taken over the sales rights for the Arnold electric vaporizer and heating plugs, manufactured by the Arnold

Digitized by Google

Electric Company, and the Long horn, manufactured by the G. Piel Company, Long Island City, N. Y. With respect to the last named accessory, the company announces a retail price reduction on the J-S model to $10.

The Hartford Suspension Company, Jersey City, N. J., has taken the new building at 425 North Capitol boulevard as a new location for its Indianapolis branch, the former quarters having been at 448-50 North Capitol boulevard. The new place was built especially for the Truffault-Hartford concern, whose Indianapolis interests are cared for by S. C. Bohannon.

The Richmond Forgings Corporation, Richmond, Va., has opened a permanent office in the Dime Bank building at Detroit, Mich., which will be in charge of the sales manager, L. C. Wellford. This company has also arranged with A. O. Knudson, Boston, Mass., to look after its large New England trade.

The Lee Tire and Rubber Company, Conshohocken, Penn., reports that the sale of its tires has quadrupled during the last nine months and an increase in the other departments of the business of more than 50 per cent. A new 600 horsepower addition to the boiler house is to be completed and a new calender and several 60-inch mills are on the ground ready for erection. Three new tire making machines and several hundred cores and side rings for the manufacture of pneumatic automobile tires are in transit. The total new equipment involves an expenditure of between $50,000 and $75,000.

The Dean Auto Devices Company, 120 South Sangamon street, Chicago, Ill., announces that in the future it will authorize every dealer handling Dean battery horns to replace any such horn which has become inoperative or imperfect in operation at any time within five years from date of purchase, upon the return of the original, accompanied by the exchange certificate.

The Republic Rubber Company's clubhouse for employees at Youngstown, O., was formally opened Jan. 15. It is located on the east side of Albert street, directly opposite the general offices, and is 60 by 130 feet, three stories high. The first floor contains bowling alleys, pool tables, reading and lounging rooms and shower baths;

Clubhouse Recently Opened for Employees of Republic Rubber Company, Youngstown, O.

the second provides a large dining room to accommodate 1200 persons, and a hall for lectures, dances, etc., and the third floor has a kitchen, a dining room for officers and office employees, living apartment for steward and rooms for the company's fire force.

The Goodyear Tire and Rubber Company of Canada, Ltd., Bowmansville, Ont., has just announced several important changes in the personnel of the sales department. P. D. Saylor, vice president and sales manager of the Canada company, has been made president and managing director of the Goodyear Tire and Rubber Company of Great Britain, Ltd. R. P. D. Graham, secretary and manager of the tire department, has been promoted to the position of sales director, succeeding Mr. Saylor.

The Factory Sales Company, 716 Williamson building, Cleveland, O., is placing on the market a new keyless lock which operates like that of the combination safe, to prevent the theft of automobiles.

The F. S. Carr Company, Boston, Mass., manufacturer of water proof automobile and carriage fabrics, has moved into the Francis building, 31 Beach street, where the general offices will be located.

The S. & M. Tire Company, Coshocton, O., expects to have its new plant in operation in a few weeks.

The Lion Liner Company of Appleton, Wis., has moved its factory and general office to Sheboygan, Wis.

The Akron Tire Company, Akron, O., has purchased land in Long Island City, N. Y., and will erect a branch factory there.

The Nu Fen Manufacturing Company, Indianapolis, Ind., has taken offices in the Hume-Mansur building. It is producing a new paint for automobile hoods, etc., which it is claimed will dry overnight.

The Auto Repair & Guarantee Service Company, New Haven, Conn., agent for Chase trucks, has removed to 212 State street, and changed its name to the Central Garage Company.

Dodge Bros., Detroit, has completed plans for a light four-cylinder machine. It will sell between $690 and $750 and production will begin next summer, after the Dodge plant concludes its existing contract with the Ford Motor Company for supplying gears and some detail parts for the Ford cars.

The Swearington Tire Company, Jacksonville, Fla., has taken over the good will and stock of R. W. Swearington and will manufacture tires, etc.

The Cole Motor Car Company, Indianapolis, Ind., has erected a large addition to its plant at a cost of $200,000.

WITH THE CYCLECAR MAKERS.

The Dayton Cyclecar Company, Joliet, Ill., has closed a contract with the Farmer Manufacturing Company for the production of its engines.

The Reid Company, Moline, Ill., has contracted for the manufacture of all sheet metal parts required by the Zip Cyclecar Company of Davenport, Ia., in the production of Zip cyclecars. Deliveries of the latter have been begun in western Illinois.

The Toledo Cyclecar Company, Toledo, O., has leased the building at 628 Erie street and will start cyclecar production in the near future. The plant will employ between 75 and 100 men and it is expected that from 15 to 25 cars a day will be manufactured.

The Flagler Cyclecar Company, 1334 Michigan avenue, Chicago, announces the Flagler cyclecar, seating two persons side by side, with wheelbase of 90 inches, tread of 42 and weight of 450. The motor is a two-cylinder unit, rated at 10-12 horsepower; transmission, friction; final drive, V belt.

The Gadabout Motor Corporation, 29 Broadway, New York City, is to manufacture the Gadabout cyclecar in a Detroit factory. The car seats two persons side by side, with wheelbase of 86 inches and tread of 46. The weight is 550 pounds. The motor is a four-cylinder, water-cooled unit, 2.5-inch bore, 3.5-inch stroke, rated at 12 horsepower. A distinctive feature is the use of a wicker basket body.

The Chautauqua Cyclecar Company has been organized in Jamestown, N. Y., by H. J. Newman and others for the production of the Chautauqua cyclecar, a side-by-side seater, with wheelbase of 102 inches, tread of 52 and weight of 600 pounds. The motor is a 12 horsepower twin-cylinder unit; transmission, friction; final drive, V belt.

The American Cyclecar Company, Seattle, Wash., has purchased a lot 60 by 120 feet on 12th avenue, between Union and Pike streets, for the erection of a factory for the production of a car utilizing a three-cylinder, two-cycle engine of 12 horsepower. The transmission of power also is to be unique, in that a friction drive will be mounted on the engine shaft, between the first and second cylinders of the engine, from which power will be transmitted by chain to the forward axle.

The American Motorette Company, Detroit, has changed its name to the Lincoln Motor Car Company, and its product will be known as the Lincoln Highway roadster. The body is arranged to accommodate three persons, an auxiliary seat being fitted, which may be folded and removed from the car as desired. The motor is a four-cylinder, water-cooled unit, with bore of 2.81 inches and stroke of four. The car employs a cone clutch and progressive gearset, affording two forward speeds and reverse. The wheelbase is 100 inches and the weight 950 pounds.

Herbert A. Meyers and A. H. Hooper, Detroit, have formed a partnership for designing and constructing engines for automobiles and cyclecars.

DIVIDENDS DECLARED.

Chicago Pneumatic Tool Company, Chicago; quarterly, one per cent.; payable Jan. 26.

Firestone Tire & Rubber Company, Akron, O.; common, quarterly, 2½ per cent.; preferred, quarterly, 2½ per cent.; both payable Jan. 15.

Lee Tire & Rubber Company, Conshohocken, Penn.; quarterly, 1¾ per cent.; payable Jan. 15.

National Carbon Company, Cleveland, O.; preferred, quarterly, 1¾ per cent.; payable Feb. 14.

Torrington Company, Torrington, Conn.; common, semi-annual, four per cent.; payable Feb. 2.

U. S. Rubber Company, New York City; common, quarterly, two per cent.; first preferred, quarterly, 1½ per cent.; second preferred, quarterly, 1½ per cent.; all payable Jan. 31.

Westinghouse Electric & Manufacturing Company, Pittsburg, Penn.; common, quarterly, one per cent.; payable Jan. 30; preferred, quarterly, 1¾ per cent.; payable Jan. 15.

Westinghouse Air Brake Company, Pittsburg, Penn.; quarterly, $2; payable Jan. 15.

Pyrene Manufacturing Company, New York City; 1½ per cent.; payable Feb. 1.

Willys-Overland Company, Toledo, O.; common, quarterly, 1½ per cent.; payable Feb. 2.

FIRE RECORD FOR THE MONTH.

O. K. Garage, Shreveport, La.; garage, $15,000.

Missouri Auto Specialty Company, St. Louis, Mo.; automobile building and contents, $7000.

M. & M. Supply Company, Prospect avenue, Cleveland, O.; store, $80.000.

Albany Garage, Albany, Mo.; garage, $30,000. W. G. Carmack is the owner.

Mrs. Mary Drummond Job, St. Louis, Mo.; garage, $4500.

Syfort Garage, Ainsworth, Neb.; garage, $15,000.

J. P. Holden, Porterville, Cal.; garage and cars.

Ira E. Fonda, New Haven, Conn.; garage badly damaged, three auomobiles and two motor boats, $8000.

H. M. Cockran, Atlantic City, N. J.; garage and machine shop, $2000.

Interboro Garage, West New Brighton, S. I., N. Y.; garage and 10 automobiles belonging to the company, $35,000.

Charles Bandelspaugh, 630 Smith street, Dayton, O.; garage, $2000.

A. Tinkler, Milwaukee, Wis.; two automobiles damaged in the garage caused by an explosion, $1000.

Hickman-Lauson-Diener Company, Milwaukee, Wis., garage.

E. A. Berg, Oakland, Cal.; garage, $1000.

Rickey Machine Company, East Orange, N. J.; garage, loss slight.

Galvin Pardee, Philadelphia, Penn.; garage, several hundred dollars.

S. J. Shinnick, Kansas City, Mo.; garage, $11,000.

Hammond-Standish Company, Detroit; garage, $25,000.

Herren, Menard & Russell, Puyallup, Wash.; garage, $115,000.

Bowe Garage, West Main street, Meriden, Conn.; garage.

Standard Glass & Motor Works, 336 Decatur street, New Orleans, La.; $2000.

Azro Castle, Tell City, Ind.; garage.

Nutley-Newark Express Company, Nutley, N. J.; garage, barns, wagons and delivery trucks, $3000.

Auto Garage Company, Montreal, Can.; building and contents, $225,000.

American Motor Car Company, East Market street, Greensboro, N. C.; building, $10,000.

Buick Auto Company, Pearl and Commerce streets, Houston, Tex.; $1000.

Central Garage Company, Dallas, Ore.; building, $35,000.

Detroit Auto Specialty Company, Detroit, Mich.; building, $5000.

Goodyear Rubber Company, Milwaukee, Wis.; $300,000.

Hendley Auto Repairing Company, 665 Golden Gate avenue, San Francisco, Cal.; loss not stated.

Joseph Hudson Automobile Company, 11 North 21st street, Philadelphia, Penn.; garage.

Harry Madden, Laurel street, Manchester, Conn.; garage, $3000.

Ohio Auto Carriage Company, 1735 East 12th street, N. E., Cleveland, O.; $15,000.

G. A. Schnabel & Sons Auto & Wagon Repair Company, Pittsburg, Penn.; building and contents, $50,000.

Southern Automobile Company, Memphis, Tenn.; buildings and contents, $20,000.

Ford Garage, Milwaukee, Wis.; building and contents, $120,000.

Samuel A. Jones, Norwich, N. Y.; garage.

Bronze Bros., Portsmouth, O.; garage.

Dr. Fred Sigworth, Annamosa, Ia.; garage and two automobiles.

Warren Electric & Machine Company, 936 Fort Wayne avenue, Indianapolis, Ind.; building and contents, $2000.

Saul Munter, 1915 North Delaware street, Indianapolis, Ind.; garage and automobile, $1000.

Alexander Cockburn, 395 Fifth avenue, Watertown, N. Y.; garage, $1500.

COMPARATIVE QUOTATIONS ON AUTOMOBILE SECURITIES.

Business conditions, as revealed by the stock market quotations respecting automobile securities during the past month, are such as to offer encouragement. It will be noted by the accompanying tabulation, which indicates the state of the market during each week of the month and in comparison with last year at this time, that many of the securities have reached a point well in advance of the quotations of January, 1913. Taken in connection with the prices quoted elsewhere and other information available, business conditions are having a decidedly upward tendency all along the line.

David L. Gallup, professor of gas engineering at Worcester Polytechnic Institute and consulting engineer in matters pertaining to motor cars for the Boston fire department, has accepted an appointment as chairman of the research committee of the Society of Automobile Engineers.

Thomas C. O'Connor has once more taken active control of the Pullman Motor Car Company, York, Penn., having reassumed the presidency after a period of about 10 months, during which time he retired in order to give attention to his extensive real estate operations.

Dr. J. W. Means has been elected president of the Columbus Automobile Club, Columbus, O.

Edward Oliver has become special representative of the Hudson Motor Car Company, Springfield, Mass., and will cover New England and New York from his headquarters in Brookline, Mass.

A. L. Danforth, formerly used car department manager of the Boston Packard Company, has become sales manager of the Cadillac Automobile Company of Boston.

G. D. Edwards, formerly purchasing agent of the Michigan Buggy Company, Kalamazoo, Mich., has been appointed service manager of the Puritan Machine Company, Detroit, in charge of repair parts for Michigan and Warren cars.

A. B. Hanson, service manager of the Chalmers Motor Car Company, Detroit, has recovered from a 13 weeks' illness with typhoid fever. He is now able to be in attendance at the office.

Eugene F. Russell, identified with the factory of the Locomobile Company of America, Bridgeport, Conn., is at present on an extensive motoring trip in the far West for health and pleasure.

S. S. Toback is now president of the A. Elliot Ranney Company, New York City distributor of Hudson cars, having succeeded Arthur M. Day, who has retired from the automobile business to go into the banking business in Wall street. Mr. Toback had been general manager of the company.

James M. Ryan has been appointed general manager of the Electric Steel Company of Speedway, Ind. Mr. Ryan has had charge of the steel casting department of the Canadian Pacific Foundries Company, Ltd., Montreal, Canada. The new company expects to install only one electric furnace to start with, but will add other furnaces as the growth of the business demands.

W. K. Erlich, formerly connected with the Electric Storage Battery Company, Philadelphia, Penn., has been made general manager of the Richmond Electric Garage, Inc., Richmond, Va.

W. L. Pelter has joined the Grand Rapids Overland Company, Grand Rapids, Mich. This firm has the Overland agency in that section of Michigan. Mr. Pelter was formerly connected with the Chalmers sales force, and more recently was state representative for the Willys-Overland Company.

E. R. Benson, vice president of the Studebaker Corporation, spent the month of December on a trip of inspection through the South. He was the guest of automobile clubs, chambers of commerce and similar organizations in St. Louis, Little Rock, Memphis, Dallas, New Orleans, Jacksonville, Atlanta, Norfolk and other cities.

J. E. Baird has been appointed advertising manager of the General Motors Truck Company, Pontiac, Mich., and will also assist in the sales department. Mr. Baird was recently with the Kingman Plow Company, Peoria, Ill., where he held the position of advertising manager.

L. B. Sanders, Sales Manager, Wagenhals Motor Car Company.

W. L. Gould was elected president of the Watertown Automobile Association, Watertown, N. Y., at the fifth annual meeting of that organization held recently.

C. F. Ames, Chicago, Ill., formerly distributor of Sewell cushion wheels, has taken the position of sales manager of the Devine Tire Company, 2020 Michigan avenue, Chicago.

L. B. Sanders, former sales manager of the Abbott Motor Company, Detroit, has been appointed sales manager of the Wagenhals Motor Car Company of the same city.

NEW CONCERNS AND BUSINESS CHANGES.

NEW GARAGES AND REPAIR SHOPS.

The Cook Motor Vehicle Company, Delmar and Clerendon avenues, St. Louis, Mo., has been taken over by the Electric Garage & Service Company. The concern will conduct an exclusive garage for all makes of electric cars at 5175 Delmar boulevard. The painting and repairing departments will be continued, as well as the agency for the Buffalo electric pleasure and commercial cars.

Alexander Schneeweiss, New York City, has leased the garage at 159 West 127th street and will locate there.

Paul Vincent and Howard D. Redfield have organized the Shore Line Garage & Electric Company at Madison, Conn. They have purchased the garage business of James Pezatti and will conduct it under the new title.

Fred H. Bates, Santa Barbara, Cal., is now established at 19 East Anapamu street, under the name of El Segunda garage.

Edward Vogelsang, Lawrenceburg, Ind., formerly with the Queen City Garage & Repair Company, has gone into business for himself and has organized the Lawrenceburg Garage & Repair Company.

G. E. Blylock, Baltimore, Md., has purchased the business formerly known as the Gauls-Blylock Company, 1823 Maryland avenue, and will do a general vulcanizing and retreading business.

Richard Golder and W. Dare, Pleasantville, N. J., will open a garage in that town.

The Donaldsonville Garage, Donaldsonville, La., has rented the repair department to S. L. Speer. Mr. Aucoin, the owner of the garage, continues the other part of the business as heretofore.

The Breitenwischer-Ford Auto Company has opened a new garage at Fourth avenue and William street, Ann Arbor, Mich. The company will conduct a general repair business.

W. C. Malone and E. Deedom, Colton, Cal., have formed a company to operate a garage and auto depot.

William Moore, has opened a garage at Windsor avenue, Oneonta, N. Y., and will conduct a general automobile business. He will also act as agent for Hudson cars.

The Central Motor Company, Owensboro, Ky., has opened a new garage at the corner of Fourth and Locust streets. The building has a frontage of 66 feet and a depth of 144 feet.

E. R. Allen has opened a new garage on Pacific avenue, Huntington, Cal., where he will handle the Studebaker cars.

The Huselton Automobile Company, Butler, Penn., is to open a new and modern garage on Jackson street.

M. R. Raymond and P. S. Anglin have opened an automobile repair shop in connection with the Southern Motor Car Company at San Antonio, Tex.

H. Stokes has leased the building on Washington street and will open a garage and repair shop at Middlebury, Vt.

The Union Service Company, St. Louis, Mo., will operate an automobile garage and repair shop at 329 South 12th street.

The Klassen Automobile Company, McPherson, Kan., has opened a new garage on South Main street.

H. K. Wright and M. V. Hanscom have opened a new garage on the corner of Main and North streets, Winchester, Ind. They formerly had a garage on South Meridan street.

Solon A. Stein, agent for the Koehler trucks, has opened a garage at 37-39 Carpenter street, Reading, Penn.

F. Roick & Co. will open a garage at 183 Broadway, New York City.

Joseph Cathcart, Jr., has opened a garage on Reid street, New Brunswick, N. J.

Moody Bros. has opened a repair shop and accessory store in Peoria, Ill., located in a three-story structure at 1805 Main street.

Townsley & Rohr has opened a garage in Palmyra, Mo., in the building formerly occupied by A. P. Bowles as a livery stable.

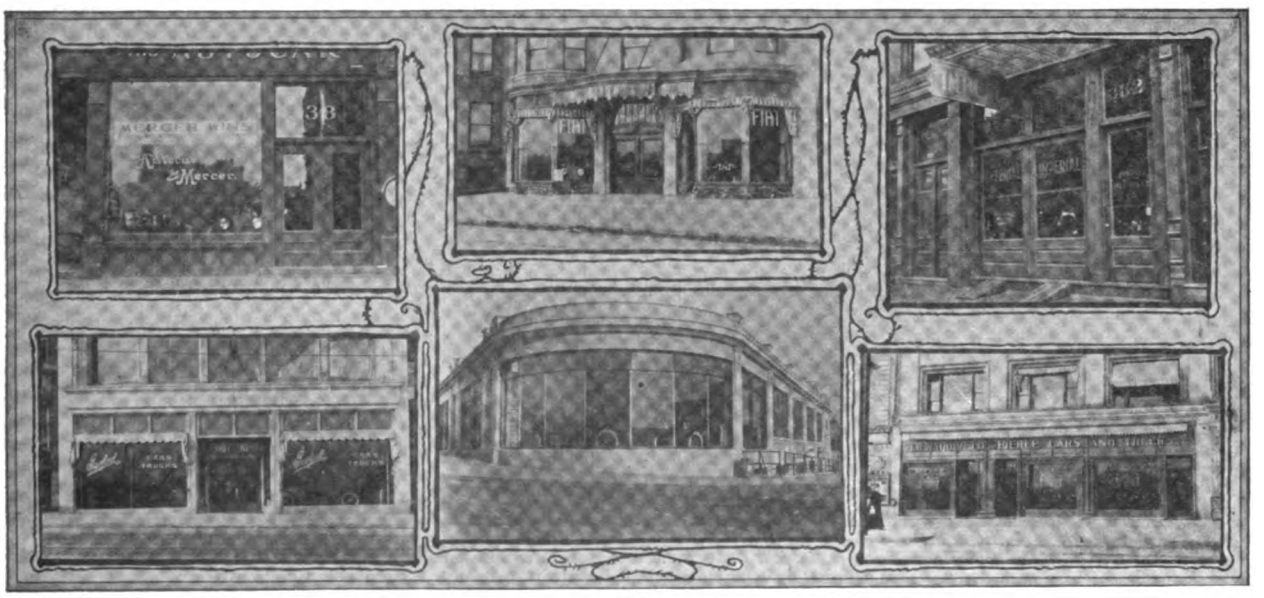
P. F. Peterson and J. L. Johnson, Eau Claire, Wis., whose new garage at 551 Franklin street is completed, have opened for business. Repair work of all kinds will be handled.

The Merrill Garage, Merrill, Wis., is open for business. A repair shop and supply store will also be conducted.

NEW AGENCIES AND DEALERS.

E. R. Metheany will engage in the automobile business in Detroit. He has engaged space and will handle the Overland cars.

C. H. Crain has purchased an interest in the automobile business of A. R. Bowen, operated under the name of the Redlands Machine & Auto Company, Redlands, Cal., and will change the name to the Bowen & Crain Company. The company will handle the Cadillac line of cars.



A Group of Boston Salesrooms: Upper Row, Mercer, Columbus Avenue; Fiat, Boylston Street; Imperial, Columbus Avenue—Lower Row, Garford, Boylston Street; Henderson, Brookline Avenue; Pierce-Arrow, Boylston Street.

The Burns-Thomas Company, New Haven, Conn., will open a service station at 228 George street. The company will handle the Oldsmobile, Overland and other cars.

T. V. Graves, formerly manager of the Goodyear Rubber Company, Omaha, Neb., has established a business of his own on Farnham street and will handle the American tires.

William P. Cuberly and Oliver O. Moore have opened salesrooms and a service station at West Hanover and Barnes streets, Trenton, N. J. They are agents for the Cole and Paige lines.

E. H. Palmer has opened a new garage and salesrooms in Charleston, S. C., at 57 Broad street, where he will handle Lyons-Knight cars.

The Jeffery Auto Sales Company, San Francisco, Cal., has established salesrooms on Van Ness avenue, near Geary street. Joseph I. McMullen is manager.

The Hansel-Ortman Modesto Company, Modesto, Cal., has established salesrooms for the purpose of handling Oakland cars.

Burnell & Clark, Marathon, Ia., has disposed of the Marathon agency to Carl Peterson and Arthur Wessman, who have taken possession.

The Studebaker Corporation's branch at Chicago, 25th and Michigan avenue, has been succeeded by the Markle Company. L. Markle, formerly manager of the Studebaker branch, is president of the new company, and C. R. Dashiel, vice president.

Samuel Lemos, Danville, Cal., has sold his garage business to Harris Bros.

The Interstate Auto & Supply Company, Sioux City, Ia., has sold to E. A. Christiansen the garage, repair shop and automobile accessory department. Mr. Groves, the former proprietor, still retains his agencies.

William Martin, Augusta, Ill., who recently purchased a half-interest in the Plymouth Auto garage, has bought the other half from Frank Oewesse.

Green Bros.' Garage, Arkadelphia, Ark., has been bought

Digitized by Google

by L. E. Gulledge, who will conduct the business under the name of the Arkadelphia garage. The former owners have a machine shop, in which they will conduct business.

The Pyle Bros. Garage, Edwardsville, Ill., has been bought by the Edwardsville Garage & Auto Supply Company. Mr. Pyle will continue to handle the Ford and Overland cars, but will not be connected with the garage business.

The Moody Bridge Garage, Moody and Pawtucket streets, Lowell, Mass., has been taken over by James M. Banger, who has had charge of the repair department for some time.

Goldie Morton, Minneapolis, Kan., has bought the interest of Jesse Kirby, in the Meridan garage, and is now sole owner of the business.

Fraak Weichel, Norwalk, O., has sold his garage business to Charles Rikeman and Carl Strecker, who will take possession on March 1.

H. B. Swalley, Nebraska City, Neb., has disposed of his garage interests to Alexander W. Neihart.

Toburen Bros. & Susdorf, Kentucky street, Rantoul, Ill., has disposed of its garage to Christy Bros. Torburen Bros. will retain the agency for the Cartercar.

The Trail Garage, Olathe, Kan., has been purchased by the Olathe Auto Company.

The Warsaw Auto Company, Warsaw, Ind., has sold its garage business to L. M. Neher, proprietor of the Ford garage, Milford, Ind. The name has been changed from Widaman's garage to Ford garage, and the business at Milford will be conducted as a branch.

The F. P. Stilp Garage, Columbia avenue, Aurora, Ill., has changed hands and will hereafter be known as the Columbia garage.

The Milton Garage, Milton, Mass., has been sold to C. A. and G. E. Merrifield and H. Wilbur Perkins. The business will be known as the Milton Garage & Machine Works.

The Beltrami Avenue Garage, Bemidji, Minn., formerly owned by John Moberg, has been bought by the Northern Automobile Company.

The Brattleboro Machine Works, Brattleboro, Vt., has leased its garage to George C. Martell, formerly foreman.

George W. Gates, Windsor Locks, Conn., has sold his repair shop to Louis L. Stone, who will conduct the business under the name of the Buick Service Station.

F. G. Hold, Kenyon, Minn., will conduct a repair business and carry a full line of supplies in his new building, completed last fall.

H. F. Davis, formerly of St. Louis, has purchased the garage of the Overland Company at 1312 West Broadway, Glendale, Cal., and will take possession at once.

M. G. Hastings has purchased the garage operated by the Island Garage Company, Potsdam, N. Y. Improvements to machinery are to be made.

William Seufert, Fort Clinton, O., has purchased the garage and machine shop owned by his son, Charles F. Seufert, and will continue the business. The former proprietor has taken a position in one of Toledo's big automobile plants.

Randall S. Williamson, San Francisco, Cal., has purchased the garage owned by Miles Standish, Richmond, Cal.

Everett Rayburn, Greenview, Ill., has purchased the garage of Hatch & Son.

Willsey & Graham, Elsinore, Cal., has taken over the Keith garage at Main street and Heald avenue. The deal carries with it the agency for the Ford and Hupmobile lines.

GENERAL SALES AND TRANSFERS.

Christ. Bang, Spencer, Ia., has sold his motor repair shop to Neis & Swift.

The Robinson Auto Company, Globe and Main streets, Peoria, Ill., has been bought by the Cole Motor Car Company, which will continue the business at the same location. F. C. Vaughn, secretary and treasurer of the company, will have active charge of the management.

The Kossuth Motor Car Company, Algona, Ia., has been sold to Paul Clement, La Porte City, and Elmer Kelley.

Dupuis Bros., Washington, Ia., has sold its tire repair business to W. E. Logan and Ira Long. The new concern will continue the business in the present location in the Graham Theatre building.

H. C. Hughes, Sullivan, Ind., has sold his business to the Bisinger Auto Company, which has now located in its new quarters at 20-22 East Washington street. The Bisinger Company has also bought out the E. S. Crowder Company.

The Acme Vulcanizer Company, 2316 Patterson street, Pittsburg, Penn., has sold its vulcanizing business to the Fisher Foundry Company, 29 South 14th street. G. F. Hollis, the former owner of the business, will maintain a machine shop for welding automobile parts at the old location.

The Automobile Repair Shop, South Dubuque street, Iowa City, Ia., has been sold to Voss & Conrod.

Crane & Kennedy, Oneida, Ill., has been purchased by Leonard Wikoff, formerly with the Galesburg Machine Works.

The Hancock County Auto Company, Marshalltown, Ia., has sold its interests to George F. Castle and his son, Arthur Castle, who will conduct the business hereafter.

Frank Harmon, Garrison, Ia., has bought the interest of Mr. O'Neill in the firm of Harmon & O'Neill, and will continue the business alone.

The Ford Garage & Supply House, West Point, Neb., has changed hands, C. C. Stahl having disposed of his interests to John E. Wiesner.

The Parsons Motor Car & Machine Company, Parsons, Kan., formerly owned by Korp & Harrington, has been bought by Kimball & Delay, who will continue the business under the name of the Parsons Motor Car Company.

Arthur L. Smith, Santa Maria, Cal., has sold his Cadillac agency to the Crescent garage.

The Spencer Auto Company, Spencer, Ia., has been bought by P. J. Claer.

The Erie Supply Company, 242 Erie street, Toledo, O., has disposed of a part interest to W. O. Taylor, who will continue under the same name. O. R. Browne, a former partner, will engage in the accessory business on Erie street.

George W. Hawkins, Houston, Tex., has sold his interest in the Hawkins-Halff Auto Company, to his partner, who will conduct the business under the name of the Halff Company.

The Mitchell-Brown Repairing Company, Salt Lake City, Utah, has been bought by the Reliable Motor Car Company.

The Thomas B. Jeffery Company's branch at 455 Broadway, Milwaukee, Wis., has been taken over by the Reeke-Osmond Motor Car Company.

The Lindsay Motor Car Company, St. Louis, Mo., local distributor of the Paige cars, has absorbed the Frye Motor Car Company.

Carl Burdeson has purchased an interest in the Independent garage, Petaluma, Cal., from his partner, and will operate it alone.

The Automobile Supply Company, Miami, Ariz., has been bought from Rucker & Liles by Glint Haymond. He will be located at the corner of Sullivan street and Keystone avenue.

William C. Thomas, Jacksonville, Fla., has bought the interest of E. C. Williamson in the Thomas-Williamson Company.

The Mogul Auto Company, 117 Broadway, Newburgh, N. Y., has transferred its lease to The Van Motor Company, which has removed from 9-11 Chambers street to the present quarters of the Mogul Company. The Van Motor Company is a branch of John Van Benschoten of Poughkeepsie, N. Y., who also has a branch garage in Kingston, N. Y.

Richards G. Edwards, 1210 Atlantic avenue, Atlantic City, N. J., has sold his taxicab business to Chanbers, Sedlag & Byrne. The new office will be located at 16 South North Carolina avenue. Mr. Edwards will retain the agency for the White cars and maintain his salesrooms for tires and machines.

C. H. Newton, Atlantic, Ia., has sold his interest in the business conducted by Newton & Felt, and has moved to Omaha, where he will go back to railroad work. Paul Beekman has purchased his interest, and the firm will hereafter be known as Felt & Beekman.

H. E. Hendrickson, Villisca, Ia., has bought the interest of Theodore Marvick in the Marvick Bros.' garage.

W. C. Moore & Co., Water street, Torrington, Conn., has sold its business to Zele Bros.

MISCELLANEOUS BUSINESS CHANGES.

The Maxwell Motor Car Company's district headquarters in Omaha, Neb., have been reorganized. John Yoke will have charge.

The Lister, Smith & Walsh Company, 37 Chestnut street, Providence, R. I., will remain the same in name, although H. R. Smith has retired from the company.

W. A. Newby, Wall Lake, Ia., has resigned from the Newby Auto Company and C. J. Rose is now sole owner.

Boone Auto Company, Boone, Ia., has changed ownership in all but the sales department, J. W. Erickson of Boone and A. G. Olson of Boxholm having bought the repair, storage and supply departments. The name has been changed to the Erickson Auto Supply Company, and the new firm will occupy the rear half and basement of the building.

H. C. Teegarden, Greenville, O., has taken over the interest of E. C. Jobes in the firm of Fouts & Jobes, and the business will be continued under the name of Fouts & Teegarden. Mr. Jobes has gone into the piano business.

Edward A. Cassidy, Philadelphia, Penn., formerly junior member of Petry-Cassidy, Inc., has withdrawn from the firm and formed a new company under the name of Edward A. Cassidy & Co., with offices in the Abbot building, where it will represent a number of the manufacturers of automobile supplies and accessories. G. B. Gosnan, formerly secretary of the Petry-Cassidy Company, has resigned and become affiliated with Mr. Cassidy, as have E. C. Wright and P. C. Smith. Branch offices have been established in Pittsburg, Penn., and Atlanta, Ga.

F. Shirley Boyd, 903 Boylston street, Boston, Mass., has added the J. H. S. shock absorbers, made by the J. H. Sager Company, Rochester, N. Y., to the line of accessories and supplies, carried by him. He is distributor for the New England States.

FOREIGN TRADE OPPORTUNITIES.

(Address Bureau of Foreign and Domestic Commerce, Washington, Giving Number, Which Will Forward Correspondence, Unless Otherwise Stated.)

12,212, Automobile Accessories—An American consular officer reports that a firm in his district desires to be put into communication with important dealers in automobile accessories in the United States. Correspondence is preferred in the Spanish language.

12,220, French Agency for American Firms—An American consular officer reports that a French agent intending to visit Canada at the end of January or beginning of February, would like to hear from American firms desirous of establishing an agency in France. During his stay in Canada this agent will be prepared to visit the United States and discuss on the spot arrangements for representing likely firms. This person speaks English and states that he has extensive connections both in Canada and in France.

12,218, Hides for Automobile Coach Work—A report from an American consular officer states that a resident of his district desires to receive offers from American manufacturers of enamelled hides for automobile coach work and upholstery. The inquirer states that he will furnish satisfactory references and would like to secure the agency for the entire country, if possible. Correspondence should be in English.

MECHANICAL DETAILS OF NEW SIX AND FOUR-CYLINDER CARS.

Of the 31 new six-cylinder models tabulated, it will be noted that 14 are of the en bloc type of casting, a decided gain over 1913, when this method of casting was confined largely to four-cylinder cars. That casting the units in pairs is favored by some is evidenced by five makes, these including the Buick, Haynes, Jeffery, Pathfinder and de Soto. Triplet units are seen in the Abbott-Detroit, Chandler, Howard, Hudson, Imperial, Marion, Moon, Palmer-Singer, Pullman, S. & M. and Velie. The L head type of motor predominates. The Continental motor has been adopted by a number of makers, and the bore of 3.75 inches and stroke of 5.25 is employed in 14 different models.

MOTORS CAST EN BLOC.

In the new four-cylinder models the use of motors cast en bloc is very noticeable, 15 makers favoring this construction as against eight utilizing the cylinders cast in pairs. This is noted in the lower priced machines, although the en bloc casting is favored by makers of cars listing much higher. With the exception of several well known makes the S. A. E. horsepower rating is below 30, and eight models are equipped with motors rated at less than 20 by the formula. As is to be expected, individual cylinders have entirely disappeared.

FAVOR DISC CLUTCH.

The disc type of clutch is gaining adherents, judging from the use made of both the dry plate and lubricated forms in the new models announced for 1914. Of 21 new designs, 12 favor the disc while nine use the cone. One friction type appears in the Crown.

The use of the selective type of gearset is practically universal with two exceptions, that of the Cameron and Saxon. The former employs its patented Cameron transmission, while the Saxon is to be equipped with a two-speed progressive gearset. The Lozier and Cameron provide four forward speeds, the balance being fitted with the conventional three forward speeds with direct drive on the third.

The electric gearshift is standard equipment with two makers, the Haynes Automobile Company and the Pullman Motor Car Company. This applies only to the new sixes and does not take into consideration other models continued from last season.

CARBURETION.

At the New York shows last year it was noted that several makers had replaced gravity feed by the pressure, a method much in vogue several years ago. It was freely predicted that in 1914 it would become general practise to mount the fuel tank at the rear of the chassis and supply the carburetor by pressure feed. The method has several advantages. It permits locating the carburetor in proximity to the water jackets of the cylinders, the heat of which assists in raising the temperature of the fuel and makes for easier starting on the present grade of fuel, in that opportunity for condensation with a long intake pipe is avoided.

Some makers hot water jacket the intake manifold and the majority also utilize the heat of the exhaust for increasing the temperature of the air supplied to the carburetor. With the fuel tank at the rear it is held that a better balance is obtained. Practically every machine is provided with means for regulating the air.

TIRES AND EQUIPMENT.

A noticeable feature of the new fours is the use of large tires, and in many instances the car is what may be termed over tired. This applies to the smaller machines as well as the larger and more expensive, and with two exceptions, those of the Mercer and Multiplex, the same size casings are fitted to the rear wheels as to the front. It will be noted in the table of specifications that 32 by 3.5-inch shoes are used on a number of different makes, a size that formerly was considered as odd by the tire manufacturer. Demountable rims are fitted to the more expensive makes, and, generally, quick detachable, to those machines listing under $1000.

The wheelbases vary considerably, but this is to be expected where a large number of cars of differing price are listed. The maker of the popular priced vehicle has considered the purchaser in the matter of equipment and with rare exceptions the machine is ready for the road with no other expense than that for gasoline and oil.

DRIVER'S LOCATION.

As was noticeable last season, the practise of placing the driver at the left has gained many adherents, and it may be said to be universal, insofar as the new sixes are concerned. Twenty makes locate the operator at the left with centre control, while two place the driver at the right, the Palmer-Singer and de Soto. The Maxwell Motor Company, Inc., is the only maker who gives option.

COMPLETE EQUIPMENT.

Last season was termed an equipment year and, while it appeared that the manufacturer left nothing to be desired in the way of accessories making for comfort and convenience, the 1914 models reveal several features not noted last year. Electric lighting and motor starting are, of course, standard, but one maker using other than electricity for starting. In the case referred to compressed air is employed.

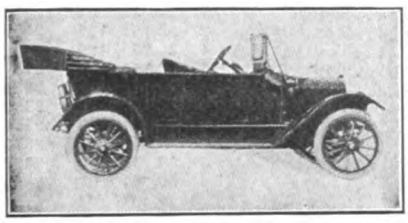
FEATURES OF NEW FOUR-CYLINDER CARS.

MAXWELL 25-4.

A Popular Priced Four-Passenger Ample Powered Touring Car.

By manufacturing in large quantities the Maxwell Motor Company, Inc., Detroit, is able to offer a popu-



lar priced machine embodying high grade material and workmanship. The Maxwell "25" was designed to meet the needs and the preference of that class of buyers who consider first cost and that of maintenance. The engineers of the company are well known to the industry and have incorporated in the new design mechanical principles indorsed by sound engineering practise.

The output of the motor is sufficient to meet all requirements of service, and it is a unit with the cone clutch and three-speed selective gearset. The power plant is very compact and a detachable cylinder head makes for accessibility of the valves, which are fully enclosed. The body is a flush side streamline, and ample leg room is provided, both in the driver's compartment and tonneau. The upholstery is in keeping with the high grade finish, and the equipment is most complete.

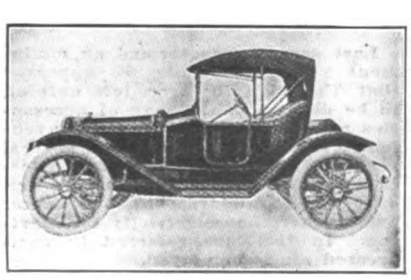
VULCAN SPEEDSTER.

Big Mileage from Fuel and Minimum Cost of Upkeep Are Emphasized.

Among the qualities emphasized in the Vulcan speedster, made by the Vulcan Manufacturing Company, Painesville, O., is that every part is made in the factories of the company and that each is subjected to rigid inspection before being assembled. The company states that by producing in large quantities and eliminating distributors, etc., it is able to manufacture a strictly high grade machine at a popular price.

The power plant is noticeable for its simplicity and is conservatively rated at 27 horsepower. Flexibility, quietness and economy of fuel are particularly prominent. The cylinders are cast en bloc and the motor, cone clutch and transmission are a unit. The maker calls especial attention to the design of the clutch, stating that the leverage is so proportioned as to make for easy release.

The gearset is of the selective type, providing three forward speeds and a reverse, and control is by a cane handle lever which is mounted on the transmission housing. The rear construction is sturdy, the differential employing five pinions instead of two



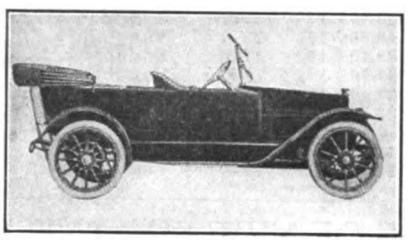
and these are of nickel steel, phosphor bronze bushed. The rear axle housing is liberally ribbed and the gears are very accessible for lubrication and inspection. The body is attractive, having full fore doors and the finish is strictly high grade. The Vulcan speedster comes completely equipped.

CRESCENT OHIO.

Five-Passenger Car Fully Equipped, Including Electric Lighting.

The Crescent Motor Company, Carthage, O., is featuring a large, roomy five-passenger touring car, termed the Ohio, which is held to have sufficient reserve power to meet varying requirements of service. The chassis details follow conventional practise. The four-cylinder motor is cast in pairs, with bore and stroke of 4.25 by 4.75 inches respectively.

Light weight, combined with a careful selection of material and

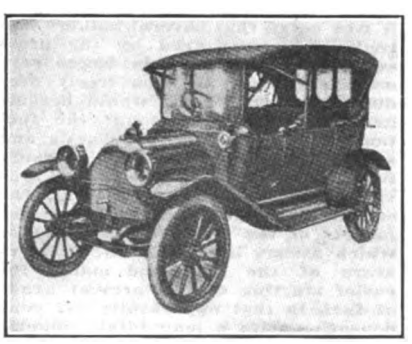


skillful workmanship are qualities emphasized in the chassis. The driver is placed at the right. The wheelbase is 116 inches.

WAHL.

Four-Passenger Touring Car with Ample Reserve Power.

The Wahl five-passenger touring car, manufactured by the Wahl Motor Company, Detroit, was designed to meet the growing demand for a light, popular priced family vehicle. The body is roomy and well upholstered and there is plenty of leg room



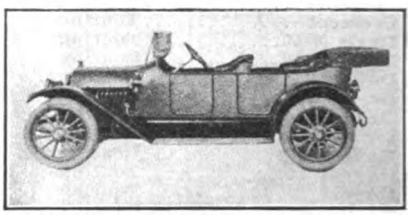
both in the driver's compartment and in the tonneau.

The cylinders of the motor are cast in pairs and their dimensions place them in the long stroke class. Economy of fuel, silence and accessibility are qualities emphasized by the maker. Lubrication is by the constant level splash system, a gear pump maintaining the proper height of the oil in the crankcase. The frame is provided with a double drop, making for a low centre of gravity, and the front of the frame is inswept, providing a short turning radius for operation in narrow streets. The Wahl comes completely equipped. Lighting is by gas and oil lamps.

CHEVROLET BABY GRAND.

Four-Passenger Light Touring Car with Low Centre of Gravity.

The Chevrolet Motor Company, Flint, Mich., is manufacturing two popular priced models, a four-pas-



senger touring car and a two-passenger roadster. The chassis is identical, the cylinders being cast en bloc and having a bore of 3.69 inches and stroke of four. The horsepower rating is 22.

Cooling is by thermo-syphon principle, the clutch of the disc type and the gearset is selective. Ignition is by a Simms magneto and carburetion by a Zenith. The driver is placed at the left. Thirty-two by 3.5-inch shoes are fitted to each wheel. The wheelbase of both models is 104 inches.

CAMERON MODEL 30.

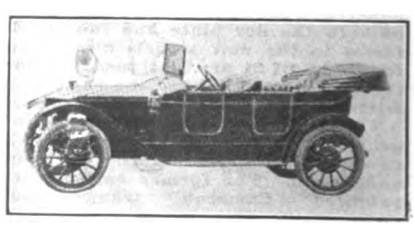
Four-Speed Direct Drive and Completely Equipped.

The Cameron Manufacturing Company, New Haven, Conn., is offering an entirely new model, in which are incorporated all of those refinements making for comfort and convenience, as well as a low cost of maintenance. The cylinders are cast en bloc and have the valves in the centre of the combustion chamber. The S. A. E. horsepower rating of 21 is very conservative.

The Cameron patented four speeds forward and one reverse gearset, with direct drive on all four, which has proven its efficiency in severe service, is again featured. This, with a flexible, long stroke motor, makes for economy in fuel. The clutch is an inverted cone, self-adjusting, and the rear axle is a Cameron, of the full floating type.

The radiator is of the pointed type, cooling by thermo-syphon, and the large capacity fuel tank is mounted in the cowl dash. The driver is placed at the left with centre control. The upholstery is deep and luxurious and the appointments throughout are in keeping with the high grade of material and workmanship. Electric lighting and motor starting are standard equipment.

The wheelbase is 115 inches. Full elliptic springs are used at the rear and semi-elliptic at front. The brake drums are extra large, providing an ample margin of safety. The weight of the car, equipped, is 1975 pounds, which places it in the light class.

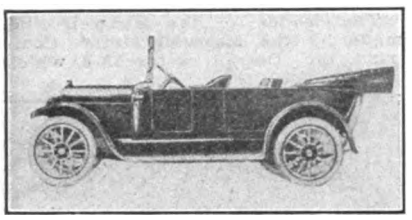


Digitized by Google

PARTIN-PALMER.

Popular Priced Six-Passenger Car Designed for Family Service.

Although the bore and stroke of the Partin-Palmer "38", a popular priced six-passenger touring car, are



not given by the maker, the Partin Manufacturing Company, Chicago, it is stated that the rating of 38 is very conservative. The motor is well designed, and presents novel features, including overhead and enclosed valves and a removable cylinder head.

The cylinders are cast en bloc, integral with the upper half of the crankcase to secure rigidity. The cylinder head is secured to the main casting by bolts, the joint being made with copper asbestos rings, insuring tightness. Cooling is by thermo-syphon and the lubricant is circulated by a gear driven pump, it being stated that it will circulate 1.5 gallons a minute at normal speed.

The material and workmanship throughout are strictly high grade and attention has been paid to those details making for comfort and convenience. Although gas and oil lighting are standard equipment, electric lighting and motor starting are supplied at a very low cost.

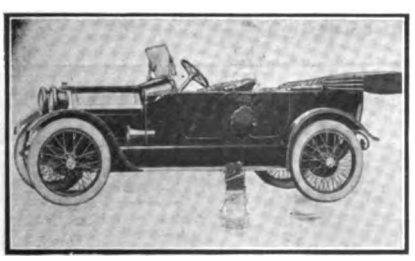
HENDERSON DE LUXE.

Large Tires, Wire Wheels and Bi-Fuel Carburetor Among Features.

The Henderson Motor Car Company, Indianapolis, Ind., is offering for the season of 1914 a new chassis termed the De Luxe, to which will be fitted five-passenger touring, two-passenger roadster, sedan and coupe bodies. The De Luxe motor has a bore of 4.125 inches and stroke of 5.5, and the company's rating is 46 horsepower. Cooling is by thermo-syphon with large intake and outlet water manifolds which, with a large size honeycomb radiator, assure proper temperatures under the severest service.

A cone clutch is employed, and the gearset located on the rear axle provides the three conventional forward speeds and a reverse. The rear axle is a Stutz. The driver is placed at the left with centre control. One of the features of the equipment is the option of a Rayfield or Harroun bi-fuel carburetor, the latter employing gasoline and kerosene.

The usual emergency brake lever is eliminated, the left pedal actuating the clutch and service brakes while the right serves the emergency brakes. De Luxe is over tired, 35 by five-inch Goodyear tires being utilized. Wire wheels are regular equipment with wood optional. The fuel tank is located in the dash and the



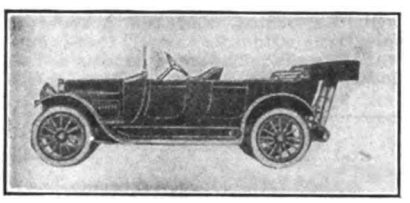
upholstery is deep and luxurious. The standard colors are dark olive and gray, at the option of the purchaser. The equipment is complete and includes electric lighting and motor starting.

ALLEN 40.

Moderate Priced Car with Two and Five-Passenger Bodies.

The Allen "40", manufactured by the Allen Motor Company, Fostoria, O., was designed to meet the demand for a moderately priced car, having those refinements and high grade material characteristic of high priced machines. Two bodies are fitted to the one chassis, a five-passenger touring and a two-passenger roadster. These have attractive lines and are complete in appointments.

The motor, clutch and gearset are



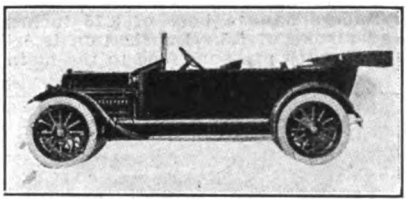
a unit. Attention has been given to the accessibility of components and to the careful selection of material. The equipment is very complete and includes electric lighting and motor starting. The driver is placed at the left. The wheelbase is 118 inches and tires are 34 by four inches.

LYONS-KNIGHT K.

Silent Knight Motor and Worm Driven Rear Axle Among Features.

The Lyons-Atlas Company, Indianapolis, Ind., is offering for the season of 1914 the combination of a silent Knight motor and a worm drive rear axle, and it is stated that the model K, as the new car is to be known, is the only one in America having these features. The new vehicle is a strictly high grade car in every particular and embodies the latest and most desirable features that have been perfected and adopted by foreign car builders.

The aim of the manufacturer has been to provide an abundance of room, so as to give the maximum amount of comfort to even the larg-



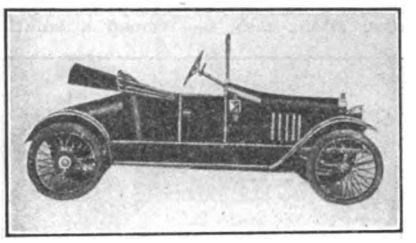
est people. The sides of the car, including the top of the doors, are high. The Knight motor utilized embodies many improvements over the conventional designs and its output is rated at 55 horsepower at 1200 revolutions. One of its features is an improved oiling system, which feeds lubricant in proportion to the motor speed.

The chassis and wheelbase of the model K cars are similar, except the rear springs, which are heavier on the six and seven-passenger cars. The five and seven-passenger bodies are standard, but the four and six-passenger types are built to order. Additional body types are offered in a sedan, five-passenger, and a berline, seven-passenger. The equipment of the Lyons-Knight cars is noticeable for its completeness.

FLYER.

Light Two-Passenger Roadster with Wire Wheels.

The Flyer, manufactured by the Flyer Motor Car Company, Elizabeth, N. J., is a light, two-passenger road-



ster having a long stroke motor, rated at 12.10 by the S. A. E. formula, although the maker states it will develop 28. Cooling is by the thermo-syphon principle and the clutch is a disc. The transmission is of the selective type, providing the conventional number of speeds.

The driver is placed at the left and the steering column is set at a comfortable angle, giving the machine a racy appearance. The body design is attractive, a sloping deck extending from the rear of the driver's seat to the rear of the chassis. The wheelbase is 100 inches. Wire wheels are included as standard equipment. The Flyer comes completely equipped and is designed for those desiring a popular priced car capable of meeting the requirements of every day service at a low cost of maintenance.

An electric lighting and motor starting system, a Ward Leonard, is also offered, being listed at $100 extra.

READ.

Light, Five-Passenger Touring Car with Wheelbase of 115 Inches.

The initial product of the Read Motor Car Company, Detroit, is a five-passenger touring car which has a very compact unit power plant, clutch and transmission. The motor is cast en bloc and is rated at 32.6 horsepower. Fixed ignition is favored, a Bosch true high-tension magneto being utilized.

The clutch is a multiple disc and the gearset is of the selective type, providing the conventional three forward speeds and a reverse. Lubrication is a combination force feed and splash, the pump being driven off the camshaft. It is of the adjustable type. The rear axle is of the semi-floating type and full elliptic springs are utilized in the rear, with semi-elliptic at front.

The maker calls special attention to the question of economical fuel consumption, and states that all material employed is high grade, carefully treated and machined. Nothing is left to be desired in the matter of equipment and the rims are demountable. The standard color is gray striped in black, with fenders, hood and running boards in black enamel. Lighting is by gas and oil lamps. The wheelbase is 115 inches.

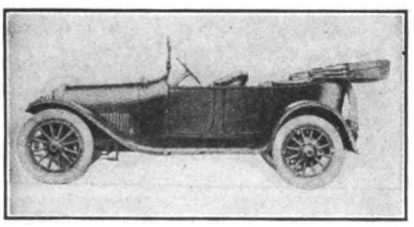
Digitized by Google

FEATURES OF NEW SIX-CYLINDER CARS.

OAKLAND 48.

En Bloc Motor Has Removable Cylinder Head.

The Oakland model 48, made by the Oakland Motor Car Company, Pontiac, Mich., may be termed a small



six in that its motor has cylinder dimensions of 3.5 by five inches, giving a horsepower rating of 29.4 according to the S. A. E. formula. The wheelbase is 123 inches. The exhaust manifold is of the double-way type, it being claimed that the construction prevents heating and carbonizing of the exhaust valves, as two successive explosions do not pass the same valve opening.

The Oakland features are continued, a cone clutch being used, and the circulation oiling system. Drive to the axles is through an unenclosed shaft, parallel to which is the torque arm, the front end of which is supported by a cushion spring. The fuel is fed by pressure and the tank has a large filler cap and gauge. The tire carriers are of special design and are said to be rattle and chafe proof.

AMERICAN 666.

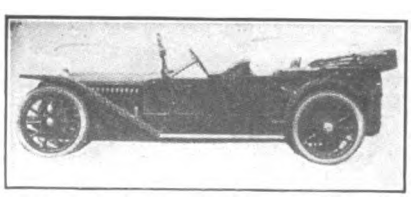
Features Underslung Suspension and Roomy Body.

The American Motors Company, Indianapolis, Ind., is featuring three new six-cylinder models for 1914, having in the past confined its efforts to the production of fours. The new models include the 642, a two-passenger car; 644, a four-passenger body on the same chassis; 646, a six-passenger car, and the 666, a six-passenger car, known as the Big Six.

The bore and stroke of the cylinders of the 666 are 4.5 by six inches respectively, and the S. A. E. horsepower rating is 48.60, which is the largest of the new sixes announced up to the present time. The cylinders are cast en bloc and are of the T head type. Accessibility and compactness are noticeable in the design.

Lubrication is by splash for the cylinders and pressure feed to the main bearings, connecting rods, etc., the splash level being maintained by a gear pump. A feature of the cooling system is that the lower water connection from the cylinders to the pump is cast in the upper part of the crankcase. To provide for unequal heating there is an expansion coupling between the water jackets and the crankcase.

Another feature is the use of a double water connection from radiator to cylinders, one connection going to each upper corner of the radiator instead of the conventional single connection to the centre. The fan



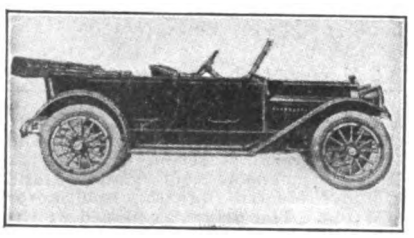
adjustment is novel, a slotted base in the fan pillar providing means for regulating the distance between the pulley centres.

IMPERIAL MODEL 44.

Five-Passenger Touring Car Fully Equipped.

The Imperial Automobile Company, Jackson, Mich., has replaced one of its four-cylinder models with a new six, which is termed the 6-44. It is fitted with a Continental motor having a bore of 3.75 inches and stroke of 5.25, and the maker rates it at 48 horsepower. The cylinders are cast in triplets, ignition is by a Splitdorf dual system, and a force feed constant level system of lubrication is employed.

The clutch is a disc, 13 plates faced with Raybestos, and the gearset is selective with the usual three forward speeds. The rear axle is a full floating design, the wheelbase is 126



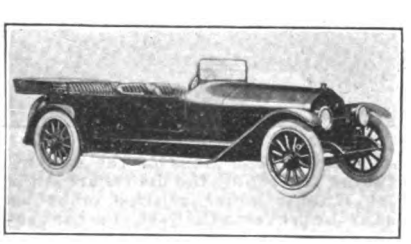
inches and 36 by 4.5-inch tires are fitted both front and rear. The electric light and motor starting system is a North East. The touring body is very attractive in appearance.

NATIONAL SIX.

Attractive Line of Bodies Feature of New Model.

The new National six, built by the National Motor Vehicle Company, Indianapolis, Ind., is a car of striking appearance, with its long, low body lines described as a one-piece design. There is a smart slope from the cowl to the radiator cap. From the radiator to the rear of the car is one continuous harmony of converging lines. Throughout the mechanical details are fully in keeping with the high grade characteristic of this concern. The touring car accommodates five passengers; the torpedo toy tonneau, four.

The motor is cast en bloc and the cylinders have a bore of 3.75 inches and stroke of 5.5. Lubrication is by splash with pressure feed to the main

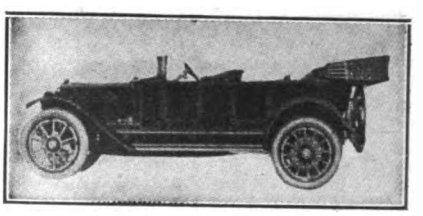


bearings and timing gears. The ignition system is dual, magneto and battery. The cooling system has been improved and the radiator is smaller than with previous models, but is fully as efficient. The fuel feed is by pressure, the tank being located at the rear of the chassis. The cone clutch may be removed without disturbing the transmission, this feature being obtained by the use of a double universal in the short shaft between the clutch and the gearset. The equipment is most complete and includes electric lighting and motor starting.

MAXWELL 50-6.

High Grade Car with Every Convenience.

The leader of the Maxwell line, made by the Maxwell Motor Company, Inc., Detroit, is the 50-6, which



is fitted with a touring body for 5-7 passengers, richly upholstered and leaving nothing to be desired in the matter of equipment and accessories making for comfort and convenience. The motor is cast en bloc and the rating claimed by the company is said to be conservative. Flexibility and economy of fuel are among the qualities emphasized in the power plant, which is noticeable for its simplicity and compactness.

Throughout the best of material and workmanship is incorporated, and all components are ample in size. The wheelbase is 130 inches, tires 36 by 4.5, front and rear, and the electric lighting and motor starting units are separate. The carburetor is a special Maxwell design, and large mileage is held to be obtained.

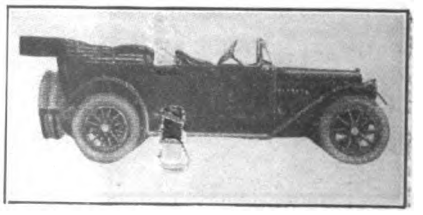
ABBOTT-DETROIT.

Belle Isle Model, a Light Six, with Wire Wheels.

A six-cylinder model, termed the Belle Isle, has been added to the 1914 line of the Abbott Motor Company, Detroit. The motor is a late type Continental having bore and stroke of 3.75 and 5.25 respectively, and is rated by the maker at 60 horsepower. The reciprocating parts are light, making for smooth operation, and the lightening of the components is said to increase the horsepower by 15 per cent. as compared with a motor having the same dimensions.

It is of the L head type and in connection with the gearbox, provides a unit power plant construction. It is lubricated by the Continental's latest system, which is a circulating splash arrangement with a new type of circulating pump. The clutch is a multiple dry disc, and the diameter of the plates has been increased over that of previous models. The rear axle is full floating, and the gearset provides four forward speeds with direct on the third and with the fourth geared up 25 per cent.

The fuel tank is mounted at the rear, and the wheels are equipped with demountable rims and 36 by 4.5-inch tires. The lighting and starting system is an Auto-Lite. A six-passenger body is fitted to the chassis, also a roadster, which is supplied with wire wheels as standard equipment. The company states that the new model is the best balanced car yet brought out under the Abbott name. The equipment leaves nothing to be desired.

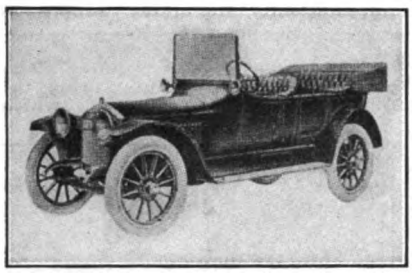


Digitized by Google

DAVIS 6-50.

Is Equipped with Five and Six-Passenger Bodies.

The George W. Davis Motor Car Company, Richmond, Ind., offers the Davis 6-50 with two body styles, five



and six-passenger types, and these are noticeable for the streamline effect, large flush doors and high grade finish. The motor is a Continental with enclosed mechanism and three point suspension, which forms, with the clutch and transmission, a unit power plant.

Ignition is by a Mea magneto, carburetion by a Stromberg, and the selective type gearset provides four forward speeds and the usual one reverse. The electric lighting and starting system is a Gray & Davis, separate units. The full floating rear axle is of liberal proportions and the brakes are ample in size.

The radiator has a rounded front, and the tool box is concealed in a dust shield, which connects the running board with the body. The trimming of the car is nickel and black, and the equipment is high grade, including every convenience.

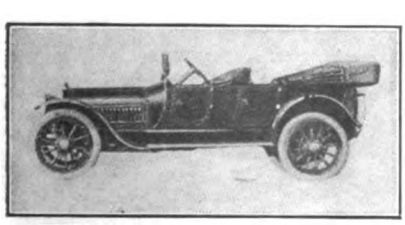
CHANDLER.

Light Weight, Big Mileage and Complete Equipment Among Features.

The Chandler light weight six, made by the Chandler Motor Car Company, Cleveland, O., is stated to weigh less than 3000 pounds when fully equipped, and its designers, who have long been identified with the automobile industry, claim 16 miles to a gallon of fuel and 700 miles to a gallon of lubricant. The motor is constructed in the factory of the company, and is of the L head type with the cylinders cast in triplets. It is in the long stroke class and is held to operate efficiently at three miles an hour on the high speed and to be capable of propelling the car 55 miles an hour. One of the features of the power plant is the use of extensions from the crankcase, which extend to the frame, obtaining weather proof qualities and eliminating the usual undershield.

The oiling system is contained within the motor, a rotary pump located in the engine pan pumping the lubricant to all main bearings and working parts. The individual trough system is utilized. The transmission is a three-speed, selective, enclosed within the case housing the multiple disc clutch, and all bearings are F. & S. imported annular. The last named are used throughout.

The lighting and motor starting system is a Westinghouse. In addition to a five-passenger car, a two-



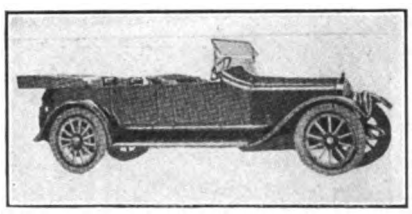
passenger roadster, five-passenger limousine, five-passenger sedan and three-passenger coupe are marketed. The equipment is in keeping with the high grade material and finish.

MOON.

Six Body Styles, All Electrically Equipped.

The new six-cylinder car manufactured by the Moon Motor Car Company, St. Louis, Mo., is fitted with six body types, having passenger capacities of two, four, five, six and seven, and wire wheels are supplied at a cost of $100 extra. The motor is of the L head type and although the bore is but 3.75 inches and stroke 5.25, the maker rates it at 50 at 1300 revolutions a minute.

A Delco system provides ignition, starting and lighting. The clutch is a dry disc and the gearbox provides four forward speeds with direct on the third. Fuel feed is by pressure, the wheelbase is 129 inches, and the tires are 35 by 4.5, front and rear. The power tire pump is driven off the flywheel of the motor. An interest-

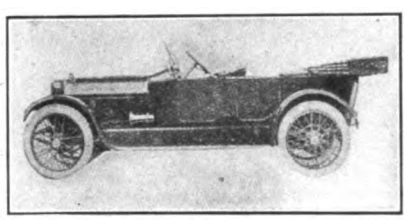


ing feature of the Moon chassis is a centrifugal oil draining device inside the wheel hub, preventing any lubricant reaching the brakes and impairing their efficiency. Electric lighting and motor starting are included in the equipment, which leaves nothing to be desired.

HENDERSON.

Four Attractive Body Designs Are Offered with New Model.

Listing wire wheels as regular equipment, optional with wooden members, the Henderson Motor Car Company, Indianapolis, Ind., claims to have been the first concern in this country to offer choice to the purchaser. The motor of the new six is noticeable for its compactness and clean lines of exterior. Although rated at 33.75 by the S. A. E.



formula, the company states it has developed 54 in block tests.

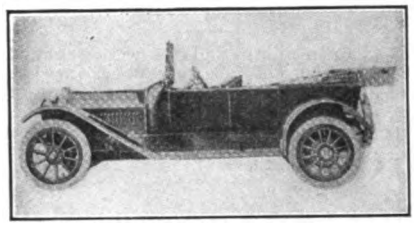
Cooling is by thermo-syphon, fuel feed by gravity and ignition by an Eisemann magneto. The clutch is a highly perfected cone and the gearset provides three forward speeds. The driver is located at the left with centre control, and, as with the four-cylinder model, the emergency brake lever is eliminated, the clutch pedal actuating the service brakes. The control lever is placed between the front cushions, and the quadrant is mounted vertically, instead of in the conventional horizontal frame.

The upholstery and equipment are fully in keeping with the high grade material and construction.

HAYNES MODEL 27.

Features Vulcan Electric Gearshift on All Models.

The Haynes Automobile Company, Kokomo, Ind., is featuring the Vulcan electric gearshift with its new



models, comprising two chassis to which are fitted a number of attractive and high grade bodies. The operation of the electric gearshift is simple. In place of the usual lever, a neat, small dial of push buttons, known as the selector switch, is located in the centre of the steering wheel. There are seven of these buttons and those numbered 1, 2 and 3, control the three forward speeds, while the reverse is marked "R" and neutral "N". The starter and horn are designated by letters "S" and "H".

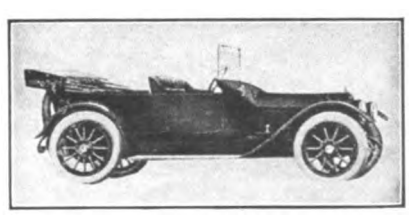
The selector switch is arranged with a mechanical lock so that only one button can remain in position at a time. These buttons control the operation of a set of electro-magnets, or solenoids, there being one for each speed. The speed is selected by the driver pushing down a button, and, upon depressing the clutch pedal fully, and releasing it, the desired gear is automatically meshed. The clutch is then engaged in the usual manner. Other changes of speeds are made in the same manner and all are accomplished instantly. It is impossible to make any errors as the construction may be termed fool proof. Its advantages in operation, especially in traffic, are obvious.

VELIE 6-50.

Three Body Styles, Including Roadster, for New Chassis.

The Velie line, manufactured by the Velie Motor Vehicle Company, Moline, Ill., is increased by the addition of a new model known as the 6-50. It is equipped with a Continental motor, which is stated to be the only component not a Velie product. It is of the long stroke type and is rated at 33.75 horsepower by the S. A. E. formula. The wheelbase is 126 inches and the tires are 27 by 4.5 all around. Lighting and starting are by the Gray & Davis system.

The bodies are of the straight line type with clean running boards. Among the features are the sloping hood with the long undercut cowl and crown fenders with flat strips at the edge. Another is the double overlaid hinge of the bonnet, which makes for strength, it being claimed that the weight of an ordinary man will not deflect it noticeably. The roadster presents novel features, having a sloping deck with doors on either side to accommodate two suit cases. The top equipment has a ratchet holder, making for rigidity on rough roads. Equipment is complete.



Digitized by Google

ACCESSORIES, SUPPLIES AND FITTINGS.

(When Writing to Advertisers, Please Mention The Accessory and Garage Journal.)

LICENSE NUMBER FRAME.

An Attractive Holder for Retaining Number Plate.

License number plates with cracked or broken enamel detract from the appearance of the car and to protect

and secure them the Auto License Number Frame & Supply Company, 1409 Turks Head building, Providence, R. I., is manufacturing an attractive frame, which is constructed in a variety of materials and finishes.

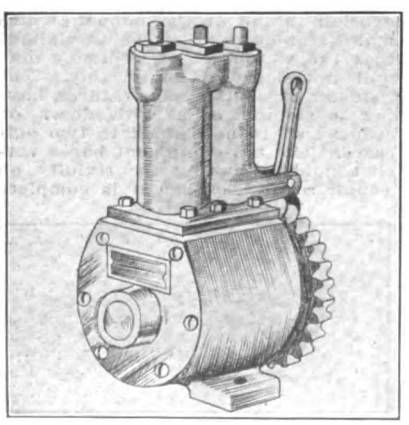
The number plate is inserted and held securely by screw bolts, preventing vibration, and the combination attached to the regular holder, provision being made to fit varying designs. The frame is constructed of highly polished aluminum, bronze and yellow brass. The last two named materials are also supplied with a nickel plate finish. One of the qualities of the aluminum frame is that it is very light.

MASTER POWER TIRE PUMP.

Constructed for Large and Small Motor Cars.

The Hartford Machine Screw Company, Hartford, Conn., is manufacturing the Master power pump, which is constructed in single and double-cylinder forms. One of the qualities of the pump is that no packing is utilized. It is also stated that the design prevents oil or other foreign substances being pumped into the tires.

The pumps are of the air-cooled type, enclosed construction, and the working parts are lubricated by an automatic splash system. The inlet valves are of the flat type, hardened and ground, and the outlet is of the ball design. The pistons are made extra long. The crankcase is an aluminum alloy, cylinders are of special gray iron, and the connecting rods of bronze. The bearings are bronze lined. The pumps may be efficiently operated at any speed from 350 to 800 revolutions a minute, although one of 600 is recommended. At this speed it is stated that the



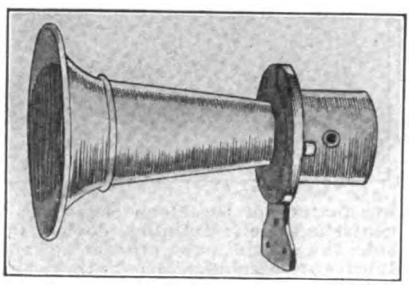
pump will inflate a 37 by five-inch tire to 100 pounds in less than three minutes. The single-cylinder design is intended for small cars, and both are held to be very efficient.

REXO II ELECTRIC HORN.

New Product of Dean Electric Company Is Inexpensive.

The Dean Electric Company, Elyria, O., which concern has marketed a number of electric signalling devices, has augmented its line with a new design which is termed the Rexo II. One of the features of the horn is that the retail price is less than $4. The company has incorporated in the new signal the same high grade workmanship and material for which the product of this concern is noted, and states that the low price is due to the fact that a production of 100,000 is planned.

The Rexo II is finished in black and nickel or black and brass. Two

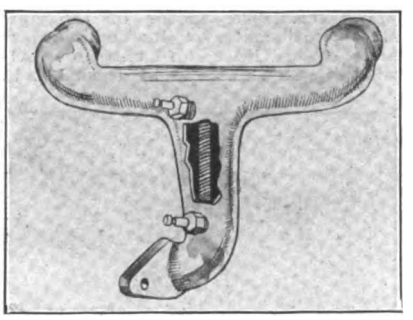


coats of baked enamel are applied by a special process. It has a six-inch bell and is quadruple plated. Suitable length of cord and push button accompany each horn.

ARNOLD ELECTRIC PLUGS.

Heat Coil in Intake Pipe Facilitating Starting of Motor.

The H. W. Johns-Manville Company, New York City, is now marketing the Arnold electric heating



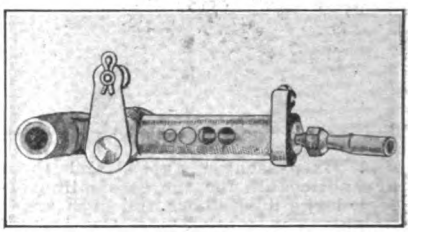
plugs, which are held to solve the starting problem when the motor is exposed to extreme low temperatures. The complete equipment comprises two electric plugs and a resistance coil, the latter being inserted in the intake manifold. The location of the plugs is clearly depicted in the illustration.

By passing a current through the coil a high degree of heat is obtained, resulting in raising the temperature of the mixture to a point for complete and instantaneous combustion. This overcomes the tendency of the fuel to condense in cold weather and makes starting easy. The terminals of the plugs are connected through a switch to a six-volt battery.

EMPIRE FUEL ECONOMIZER.

Automatically Regulates Supply of Gas and Air.

The Brown-Taylor-Greene Company, Chicago, is manufacturing the Empire gasoline economizer, which



differs from the conventional types in that the control of the auxiliary air is automatically regulated in proportion to the speed of the motor. This feature is obtained by the connection of the economizer to the throttle linkage. The maker points out that with some types of carburetors too rich a mixture is supplied at low speeds, and that the Empire so regulates the air and gas as not only to provide efficient proportions, but also to effect considerable economy.

Claims of 20 to 80 per cent. in fuel economy are made. The device is very compact, and the control of the air is by suitably proportioned ports, which are uncovered by a piston or plunger.

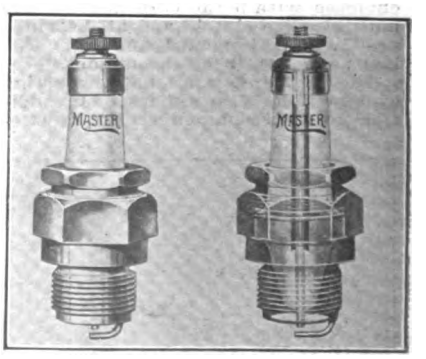
MASTER SPARK PLUG.

Constructed to Meet Demand for a High Grade Plug.

Believing that there is a demand for a high grade spark plug, the Hartford Machine Screw Company, Hartford, Conn., is manufacturing what is termed the Master plug, which is to be marketed at a moderate price because of a production in quantity. The porcelain is made extra heavy and the company states that the design will withstand strains which break down ordinary insulators.

The seat for the porcelain is very wide and well cushioned, and ample margin is provided for the effects of expansion and contraction. One of the qualities emphasized in the Master plug is that it may be easily and quickly disassembled and the parts replaced without interfering with their efficiency. Throughout the best of material and workmanship are incorporated.

The Master is made in standard threads and with varying lengths of base to meet the requirements of varying motor design. The company is licensed under the Canfield patent, and calls attention to its facilities for manufacturing in large quantities. The plug is moderately priced.

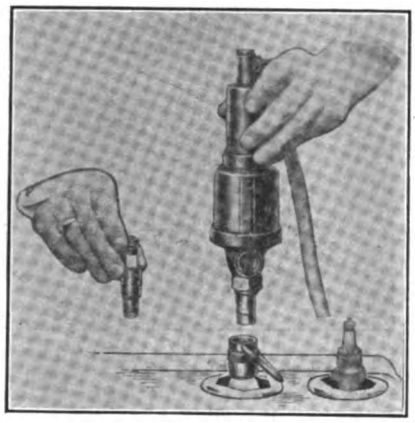


Digitized by Google

MAYO PUMP SPARK PLUG.

Quick Detachable Type for Use with Power Pump.

The Mayo Manufacturing Company, Chicago, maker of the Mayo power tire pump, has brought out the Mayo



quick detachable spark plug for service with its product. It comprises an adapter, which is permanently installed in the cylinder, a connection for attachment to the lower end of the pump, and a part which is threaded into the adapter and which acts as a lock nut for tightening either the spark plug or pump into the adapter.

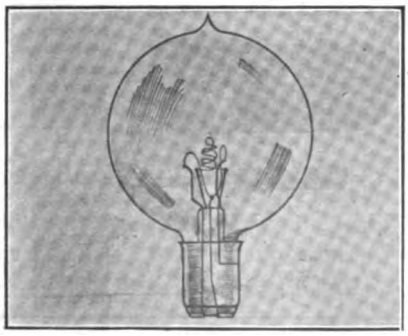
The lock nut has milled slots into which the spark plug proper is inserted until projections rest on a shoulder in the adapter beneath the lock nut. By giving the lock nut handle a quarter turn, the parts are locked. The Mayo pump is attached in a similar manner, by slipping it into the slots in the adapter, and giving the pump a quarter turn, then applying the lock nut by a quarter turn to the left. Old style pumps can be equipped with the extra connection.

TULITE AUTO BULB.

Employs Two Filaments, One of Which Is for City Driving.

One of the features of the electric lighting equipment of the 1914 models displayed at the New York show was the dimming attachment, a construction permitting of so reducing the candlepower of the headlight bulbs as to eliminate glaring effects. The Tulite Auto Bulb Company, Detroit, is manufacturing the Tulite bulb, which obtains the dimming effect, and a quality of the design is that but a single bulb is employed in the headlight.

Two filaments are utilized, these being so arranged that the use of the smaller does not impair the efficiency of the other. A standard four candlepower light is provided for city work, and a 20 candlepower member for country driving. The first named provides sufficient illumination for ordinary driving at low speeds in the country, but does not have the undesirable glaring effect noticeable with lamps of larger candlepower. One of the qualities of the Tulite bulbs is that they may be utilized on a car equipped with electric lights by connecting the side light circuit to the small Tulite filament.

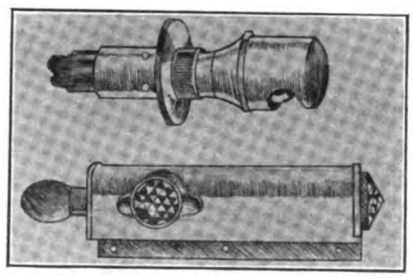


C-S REAR NUMBER LAMP.

The Culver-Stearns Is a Compact Electric Unit.

The Culver-Stearns Manufacturing Company, Worcester, Mass., and Detroit, is marketing the style K rear number light, which is designed to meet the demand for a lamp which will properly illuminate the rear number plate, and the maker states that the rays are so diffused that the numbers can be read easily at a considerable distance. While not made for a tail light, it is equipped with a small, but powerful, red lens.

The company is also making the style D combination dash and trouble lamp, which is so constructed that the lamp proper may be easily and quickly detached and employed as an inspection light. Suitable length of

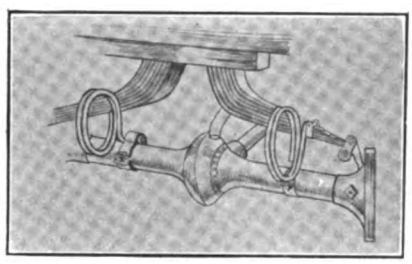


cord is provided, and the combination unit may be easily installed.

CUSHIONET SHOCK ABSORBER.

Ford Design Clamps to the Axle and the Spring.

The Walker-Moore Manufacturing Company, Racine, Wis., is marketing the Cushionet shock absorbers, which are stated to be a practical solution of the shock absorber problem for the model T Ford automobile. They are made for both the front and rear springs, and no adjustment, fitting or



alterations are necessary. They are quickly attached by hooking the top arm over the spring, then forcing the lower arm downward, and bolting a clamp to the axle. This, the maker states, provides the proper tension. It is also claimed that a set of four can be fitted to the car by a novice in less than 30 minutes. The Cushionets are made of crucible steel with drop forged fastenings.

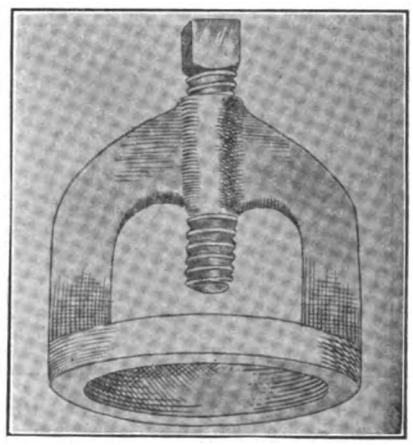
ELECTRIC LIGHTING.

That the convenience of electric lighting appeals to the owner of the used car is demonstrated by the increasing number of equipments designed especially for this service. Several makers include brackets for mounting the generator, and generally the equipment is complete.

MONARCH WHEEL PULLER.

Designed for Removing Wheels of Ford Cars.

The Benford Manufacturing Company, Mt. Vernon, N. Y., has brought out a wheel puller for the model T



Ford automobile which is not only inexpensive, but is guaranteed to remove the most obstinate wheel with ease. The Monarch, as it is termed, is made to screw on the hub flange after the hub cap is removed, and is threaded up snug. The threads of the puller are so cut that it may be fitted by hand, and the maker states it will not stick or bind in service.

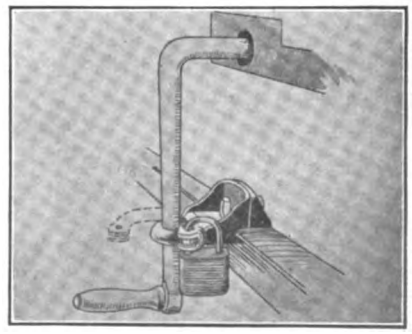
The puller carries a set screw of large thread, which is screwed up against the axle until snug. The leverage obtained is said to be very powerful. The Monarch, although light and compact, is designed to withstand severe service. The best of material is employed and each puller is carefully tested before being packed for shipment.

FORD B. & W. CRANK LOCK.

Secures Starting Handle to Crankshaft of Motor.

The Universal Manufacturing Company, Racine, Wis., is marketing the B. & W. crank lock, which is designed for model T Ford cars, and the maker states that it will positively prevent use of the machine by others than those intended. It comprises a clamp made in two sections, for attaching to the axle, and carrying a hinged shackle. The last named is operated much in the same manner as a padlock, differing in that a lock is employed for securing the movable portion of the hinge. When not in use the lock proper is moved downward out of the way of the starting handle. The B. & W. device is provided with two keys, constructed of sturdy material, and comes finished in black enamel.

The maker states that the B. & W. crank lock can be attached in a very short time by the most inexperienced, and that it does not prevent moving the car about the garage. It is moderately priced.

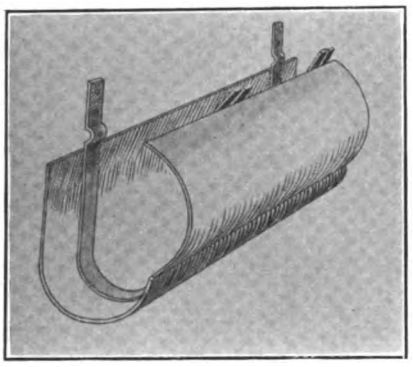


Digitized by Google

GLOBE GAS TANK COVER.

Made in Two Pieces and Locked by Winged Nuts.

The Globe Machine & Stamping Company, Cleveland, O., is manufacturing the Globe gas tank cover,



which is designed to enclose the Prest-O-Lite gas tank. It is made in two semi-cylindrical sections, which conform perfectly to the contour of the tank, and the material is durable. The sections are hinged, permitting the tank to be inserted and closed, and readily removed. One of the qualities of the design is that the straps are concealed, the only parts showing being the extensions, which are bolted to the running board or body. The two sections of the cover are locked together by T bolts and wing nuts.

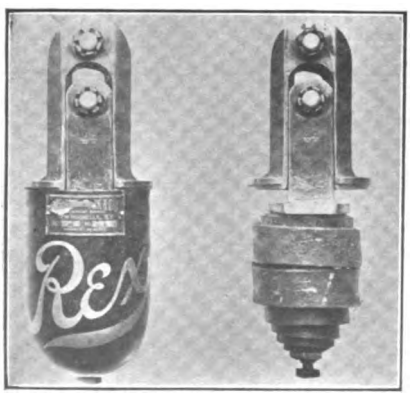
The Globe cover is made for model B and model E Prest-O-Lite tanks. The first named is 20 inches long and 6.25 in diameter, and the E is 18 inches long and 6.25 in diameter. The finish is black enamel, baked on. The company also manufactures a cylindrical form with an open seam at the bottom. Both types save the labor of polishing the tank and add to the appearance of the machine.

REX SHOCK ABSORBERS.

Made in Various Forms for Different Suspensions.

The Rex shock absorber is manufactured by the Rex Shock Absorber Company, New Rochelle, N. Y., and Stamford, Conn., and is designed for use on front and rear springs and for varying suspensions. A feature emphasized by the maker is the use of a double volute spring in such manner that it absorbs the upward and downward movements, and with the use of but one adjusting nut.

The frame or shackle is made in one piece, and the inner fork is similarly constructed. The last named has a compact guide inside the outer frame, an arrangement that the maker states makes for great strength as well as eliminates wear



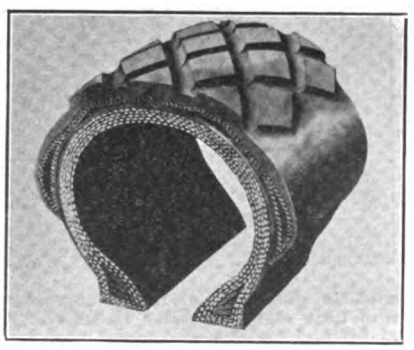
of the mechanism. The absorber spring is contained in a grease and oil tight cover.

The Rex shock absorbers are made in different sizes and for all types of cars. The company is manufacturing a new design, similar to the Rex, but utilizing an air cushion.

GOODYEAR DETACHABLE TIRE.

Detachable Tread Securely Held by Inflation of Tire.

The Goodyear Tire & Rubber Company, Akron, O., has brought out a novel tire, consisting of a regular tire carcass and a detachable tread. When the tire is deflated, the tread can be removed easily, yet when properly pumped up, the two parts have the qualities of a one-piece shoe. This makes it possible to replace either part in a few minutes. The tread is retained by inflation, and a secret construction provides the edges of the tread with a grip that excludes water or dirt. No mechanical fastenings are employed, and it is stated that the resiliency of the shoe is not impaired. The tread is built slightly square on the inside,

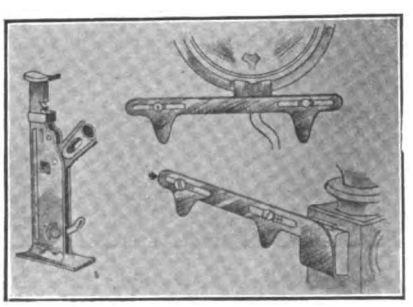


providing air chambers at the two points of vibration on each side of the centre of the tread. This, it is stated, prevents injury by heating.

LIFTING JACK FOR FORD CARS.

An All-Steel Construction Which Is Very Compact.

The Walker-Moore Manufacturing Company, Racine, Wis., is producing



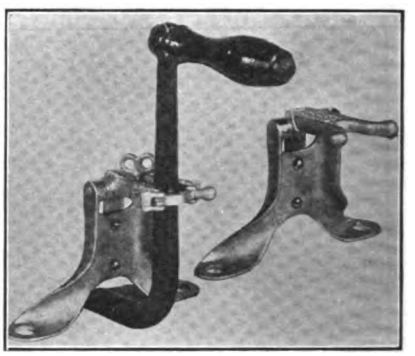
a special jack for the model T Ford car, which is constructed entirely of cold rolled steel. One of the qualities of the jack emphasized is that the base and standard, also the rack bar and cap, are electrically welded. The pawls are case hardened and are carried on short, stocky rivets.

The entire mechanism of the jack is operated by a single spring, and the car can be raised by an upward movement of the lever, or lowered by a reverse movement. The maker calls attention to the light weight, compactness and durability of the tool, stating that it will lift easily 1000 pounds dead weight, and that it is capable of raising cars weighing 2000 pounds. The company also makes number holders for Fords.

STARTING CRANK HOLDER.

Designed for Ford Cars and Is Also Made with Lock.

A practical accessory which will appeal to the owners of model T Ford cars, is the starting crank holder be-



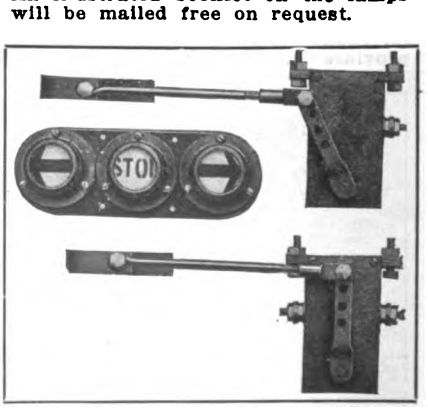
ing marketed by the Auto License Number Frame & Supply Company, Providence, R. I. It is made in two styles, one including a revolving lock with a detachable key. Both designs are attached in a few minutes by removing the nuts securing the spring clip bolts, slipping the holder frame over, and replacing the nuts. One of the qualities of the holder is that it can be moved instantly upward and out of the way of the starting crank when the use of the latter is desired. The crank is securely held in an upright position, preventing rattling. The lock proper is well designed.

J-M MOBILITE SIGNAL LAMP.

Indicates to Approaching Vehicles the Course to Be Taken.

The H. W. Johns-Manville Company, New York City, is marketing a practical compact signalling device, which is utilized to warn approaching vehicles of the direction to be taken by the machine, and provision is also made for notifying the other car when a stop is to be made. The new light is known as the J-M Mobilite signal lamp, and consists of three small electric lamps mounted on an aluminum base finished in ebony black. When the steering wheel is turned to the right or left, a white arrow automatically appears in the corresponding lamp, indicating the direction the car will proceed. When the clutch is thrown out, the word "Stop" appears in red letters in the centre dial of the device.

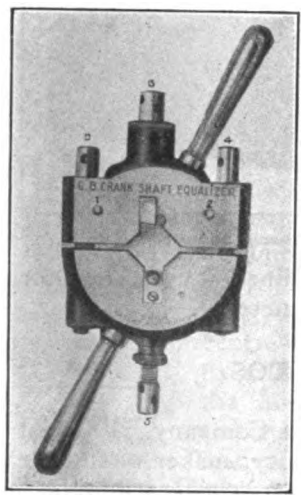
The signals are operated by self-contained, water proof contact devices attached to the steering gear and the clutch. Each unit comprises a vulcanized rubber socket fitted with a special tungsten bulb and a powerful reflector. The lamps consume but little current, and can be operated economically on dry cells. An illustrated booklet on the lamps will be mailed free on request.



Digitized by Google

GARAGE AND REPAIR SHOP EQUIPMENT.

THE usual method employed for equalizing or truing up the bearings of a crankshaft is to place the work in a lathe. The G. B. Sales Corporation, 1790 Broadway, New York City, is marketing the G. B. crankshaft equalizer shown in an accompanying illustration, it being designed for truing up bearings by hand. The maker states that it will true up the bearings of a crankshaft in from three to four hours and that accurate results are obtained.



G. B. Crankshaft Equalizer.

If one or two bearings require attention it is stated that the work may be done without removing the crankshaft from the motor, only the displacement of the bottom of the crankcase and dropping the bottom half of the crank arm being necessary.

The operation of the tool is best explained by the directions accompanying each member: Take out the Nos. 1 and 2 pins, pull the tool apart and attach to crankshaft, then replace the pins. Screw down the adjusting screws Nos. 3 and 4, until a light but firm contact is made with the shaft. Next adjust the steel roller by the screw No. 5 until the same touches the shaft lightly. Screw down the cutting knife by the screw No. 6 to a cutting position and turn the tool slowly and steadily.

The G. B. crankshaft equalizer is constructed of high grade material throughout. The cutting blade is made of the finest quality of high speed, oil tempered tool steel, and it is stated that it will true up 25 shafts with one sharpening. It may be resharpened by the user, but the factory makes no charge for this work. The tool is made in two sizes, the No. 1 taking shafts from two to 3.5 inches, the No. 2 being designed for shafts from 1.5 to 2.5 inches.

ALUMALUX.

The Alumalux Company, Sidney, O., is marketing Alumalux, a solder especially compounded to unite aluminum with aluminum without the aid of a blow torch.

HEALY VALVE RESEATER.

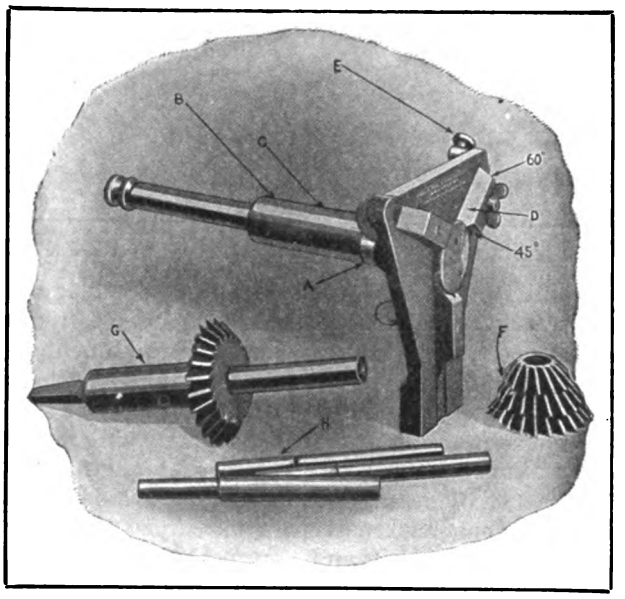
The Healy valve reseater and dresser is manufactured by the Healy Tool & Appliance Company, Brocton, N. Y., with New York City office at 1790 Broadway, of which Ralph Waldt is manager. The complete equipment is shown in an accompanying illustration with the components lettered.

A bearing on the valve stem is provided at A, it being in the same relative position as to seat as is the bearing in the cylinder. This bearing coming so near to the valve head eliminates chattering while the valve is being dressed. A second valve stem bearing is provided at B, it holding the stem central and rigid while a cut is being made. The adjustable bearing handle is shown at C and it may, by a few turns, be adapted to any size valve stem or worn members.

The reversible face cutter D has a 45-degree cutter at one end and a 60-degree at the other. These being adjustable, a roughing cut may be first used then a finishing cut without disturbing the adjustments.

The adjustment of the face cutter is depicted at E. It can be set to the thousandth of an inch. The seating cutter F is so shaped that it will remove all shoulders. The cutter carrier G has a taper which corresponds with that of the cutter, aligning it perfectly in the carrier. A Brown & Sharpe taper to the pilot aligns the same perfectly with the cutter as shown at H.

The tool is operated by hand; all wearing parts are of tool steel, hardened and ground to exact proportions, and the equipment comprises a dressing head complete with an extra roughing cutter, also one each of 1.625, two, 2.25 and 2.5-inch valve seat cutters and carriers. The pilots included consist of one each of .3125, .375, .4375



Healy Valve Reseater and Dresser.

and .5 inch. Labor and time saving qualities of the tool are emphasized by the maker.

MINIMAX PUMPING OUTFIT.

Herz & Co., New York City, is marketing a portable type of electric air compressor, termed the Minimax garage pumping outfit. It is a complete air compressor equipment mounted on a truck having a convenient handle for moving the unit as desired. A feature of the truck is the use of a metal tray which is sufficiently large to ac-

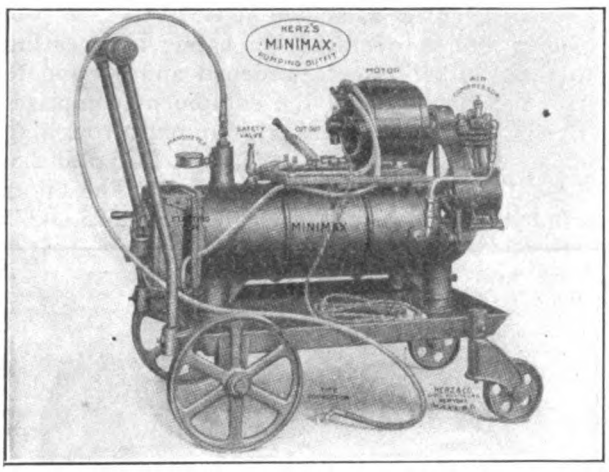
Digitized by Google

commodate tools in addition to the motor, pump and tank.

The air compressor is a double-cylinder pump with cranks set at 180 degrees. The cylinders have a bore of 1.375 inches and stroke of 2.5, and the operating speed is 400 revolutions a minute. The height is 11 inches, width 3.5. The electric motor is rated at .25 horsepower, and is supplied for direct or alternating current and different voltages. The gears driving the pump are accurately cut, of high grade material, and are enclosed by a guard.

The tank is of cast iron, and all air passing to it flows through a check valve of special design. The tank is 20 inches long and nine inches diameter. The capacity of the tank is equivalent to 5.5 gallons of water. It is tested to a safety pressure of 250 pounds. A safety valve is placed behind the manometer and may be set to a pressure up to 125 pounds, and the valve is stated to be very accurate in its action and will not require attention.

One of the qualities of the equipment is that all wires between the motor and the switch are



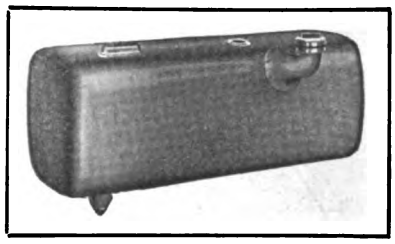
Minimax Garage Pumping Outfit Marketed by Herz & Co.

carefully protected against damage or leakage of current. Connection to the supply of electricity is by a cord and a lamp socket. The equipment includes a starting switch and suitable length of steel covered hose to connect with the tire, etc. The maker states that the Minimax will inflate several tires from the supply in the tank and that the cost of operating is but a few cents a day. The workmanship and material are first class in every respect. Price list and complete details of the Minimax equipment will be forwarded on request.

JASCO LEAKLESS TANK.

After experimenting for over a year, Janney, Steinmetz & Company, Philadelphia, has perfected a series of square dies to make a seamless, leakless, drawn, bolster shaped underhung tank. The growing practise of carrying the fuel tank at the rear of the chassis and the advantages derived therefrom has led the company to produce various sizes, the most popular being 13 inches wide by 13 high and from 30 to 36 long, according to the location of the hanging straps of the chassis. The tank is also produced 12 inches high and 14 wide and in convenient lengths to accommodate the hanging straps.

All models are supplied with standard fittings made by the company, including brass goose neck extension filler, outlet with sediment cup, up-feed tube for pressure service and gasoline indicator to show contents. The company is continuing its line of cylindrical or round tanks and in all diameters.



New Jasco Seamless Tank.

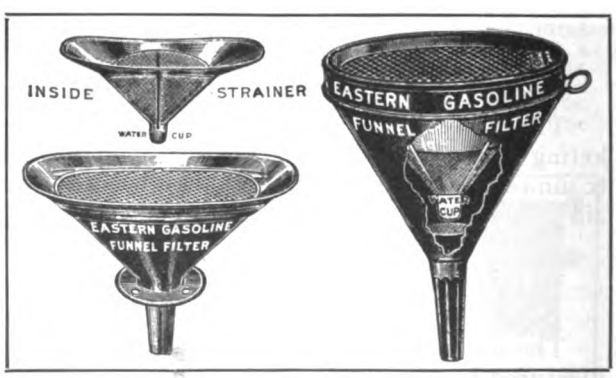
FLEXMETOS.

The United Metal Hose Company, 510 West 24th street, New York City, maker of flexible metal hose and tubing, is marketing a new type of flexible metal tubing for conveying gasoline from the garage pump to the tank of the motor car. It is termed Flexmetos, of four-wall interlocking construction, and is covered with a special braiding. It is made in various sizes and with suitable fittings.

EASTERN GASOLINE FUNNEL FILTER.

The Eastern Oil Tank Company, 146 Fletcher street, Lowell, Mass., is manufacturing the Eastern gasoline funnel filter, a part sectional view of which is shown herewith, also the inside strainer. The maker states that the design is very efficient in separating water and other foreign substances from the fuel and that its construction permits of easy disassembly and replacement.

As will be noted by the illustration the gasoline is filtered through a mesh and an inside strainer is included, the latter catching all water. The maker states that the funnel can be used in rainy weather without any water reaching the tank and that splashing of fuel is prevented. The



Eastern Gasoline Funnel Filter for Separating Water and Other Foreign Substances from the Fuel.

funnel filter is made to be carried easily in the car, assuring the use of clean fuel when purchased on the road, etc.

NEW FORD PLUG.

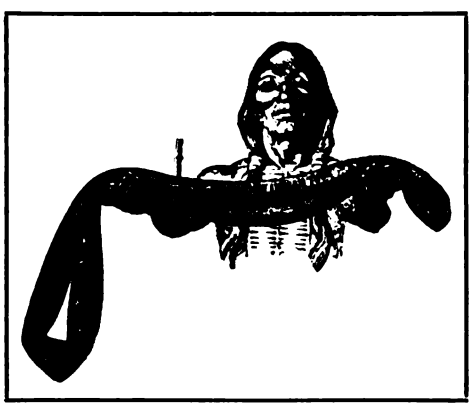
The Splitdorf Electrical Company, Newark, N. J., which is marketing a true high-tension magneto for the model T Ford motor, has brought out a spark plug designed especially for this engine, which is shown in an accompanying illustration. It is constructed to withstand the burning effect of magneto currents and high voltages of induction coils, the electrodes being constructed of a heat resisting material.

Splitdorf Ford Magneto Plug.

The plug embodies the same principles as the Common Sense plug made by this concern, the centre electrode being protected by a lateral winding of white India mica over which is a protector of special porcelain. The last named is hexagon shaped. Gas tight features are obtained by the use of a copper and asbestos gasket and a vulca-bestian gasket. The sparking points are extra heavy, and one of the qualities emphasized in the design is that the gap is not increased by the intense heat of the magneto spark.

INDIAN INNER TUBE.

The B. F. Goodrich Company, Akron, O., maker of Goodrich tires, is placing a new inner tube in the market, which is said to possess a number of distinctive features. It is termed the Indian, and it is explained that it gets this name from the fact that it is a reddish brown in color.

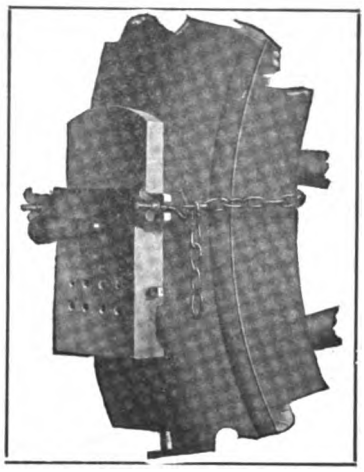


New Goodrich Indian Inner Tube.

The new tube is slightly heavier than the gray tube made by this concern, and it is stated that, by reason of a new process in curing, it has sufficient tensile strength and elasticity to withstand the constant road jars. The maker claims that in matter of elasticity it will remind the motorist of the sling shot days of his boyhood, in that it appears to possess the ability to stretch unduly and still return to its original form.

NEW WIZARD VULCANIZER.

The National Motor Supply Company, Cleveland, O., well known maker of vulcanizers, is manufacturing a new model known as the Wizard automatic steam vulcanizer. It has a hollow body partly filled with water and sealed at the factory. A fire box filled with asbestos packing is cast in the bottom of the vulcanizer, and upon pouring a predetermined amount of gasoline in the receptacle, the fuel is absorbed by the packing. When the fluid is ignited, it burns with a blue flame and no smoke, a series of draft holes being open to the firing chamber, as will be noted by an accompanying illustration, which shows the Wizard attached to a casing. As the temperature is automatically controlled, the vulcanizer requires no attention after lighting, and it is stated that perfect vulcanization can be easily obtained in five minutes.

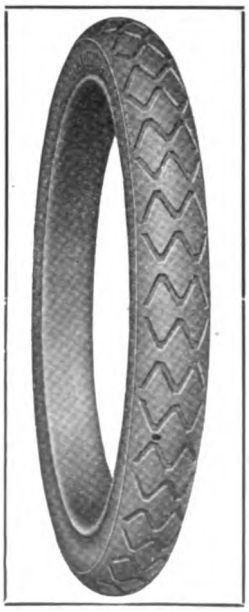


Wizard Steam Vulcanizer.

The Wizard has a vulcanizing face six inches long and three wide. It is curved to conform to a casing against which it is clamped by an adjustable chain held by special retainers. When tubes are to be repaired a plate is employed. The Wizard permits of repairing shoes without removing them from the wheel. The entire equipment is nickel plated and highly polished and is very complete, including rubber, cement, shears, instructions, etc., packed in a neat wood box.

NEW ANTI-SKID TIRE.

The Republic Rubber Company, Youngstown, O., maker of Republic tires and tubes, announces a new type of anti-skid tire called the Republic "W M" tread, which is designed especially for light cars and comes in the following sizes: Thirty by three, 30 by 3.5 and 32 by 3.5 inches. As will be noted by the accompanying illustration the anti-skid tread resembles an M or a W, according to the position of the casing. The same high grade materials and workmanship are incorporated in the new shoe as is characteristic of the products of this company which manufactures the Republic staggered non-skid and plain tread casings. The line of inner tubes includes both the gray and black line. The Republic Rubber Company has branches and agencies in the principal cities of the United States, Canada and Mexico.



The Republic "W M" Tread Tire.

Advertising Copy for the ACCESSORY AND GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

BRIGHTER BUSINESS OUTLOOK.

Carefully prepared reviews of the business situation during 1913, as presented by financial interests, set forth that only about two weeks out of the 52 left pleasant memories. These were the two last weeks in December, in which conditions generally were so satisfactory as to presage a distinctly brighter financial outlook for 1914. The general tone of business during the first two weeks of this year has been such as to bear out that prediction.

The automobile industry has again demonstrated its ability to pass through periods of financial stringency with success. No attempt is made to compare 1913 with 1907. The factors which disturbed business and financial interests last year were not such as to bring about conditions which could be regarded as hard times. Merchants and manufacturers in practically all lines were inclined to make purchases in limited quantities and at times it was difficult to secure ready money. In spite of these tendencies, the business done by the automobile industry was the largest in its history.

Those who have watched the financial situation during the past month cannot help but be convinced that there has been an important increase in buying. Merchants are beginning to stock their shelves, and manufacturers are preparing to resume normal production. It is not to be expected that business can recuperate entirely in a month, but the general tendency is strongly upward. This situation is of decided interest to all those engaged in the automobile industry, as having an important bearing upon the sale of motor vehicles, particularly those designed and constructed for business purposes.

THE NEW YORK SHOW.

No automobile show in New York City ever held greater promise for business in the immediate future than that which closed this month. Insofar as the cars on display were concerned, there was little that was strictly new, aside from the body designs. The accessory division presented somewhat different conditions in this respect, although, for the most part, the new devices exhibited were known to the trade through announcement in automobile publications. The advent of the cyclecar also helped to create interest in the exhibition.

The point to which special attention is directed in this instance is the matter of attendance. According to the box office receipts, the number of paid admissions each day was larger than for the corresponding day in any previous year. Although Grand Central Palace is better arranged to handle crowds than Madison Square Garden, it was difficult to make headway among the exhibits any afternoon or evening.

It hardly will be denied that the general public does not pay good money to visit an automobile show unless it is interested in the products on display. For the most part, the cars exhibited could have been viewed at the salesrooms on Broadway at any time during the past few months. That the attendance was so large cannot be attributed to any other reason than that the people who visited Grand Central Palace were interested in the purchase of automobiles, and took advantage of the opportunity afforded to make comparison of the various models offorded for their consideration.

Leading concerns in the principal commercial centres—New York, Chicago, Boston, Philadelphia, etc.—long ago appreciated the value of systematic arrangement of details, and have reorganized their business to meet present day conditions. If concerns doing a large volume of business find it necessary to study the local field and adopt systems which afford proper regulation of the various departments, there can be little doubt as to the efficacy of such methods with the dealer in the smaller city or town. New Year's is a period for making good resolutions. Make a resolution, now, to adopt systematic methods during 1914.

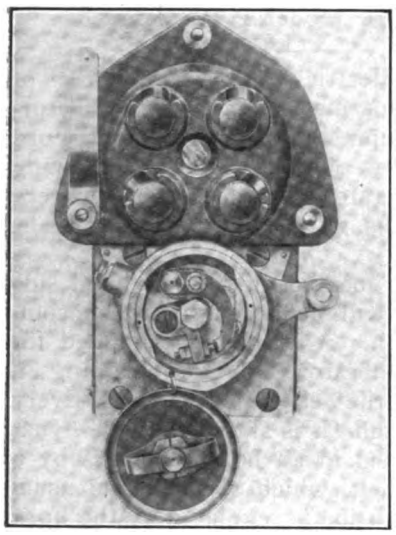
SPLITDORF ANNOUNCES NEW MAGNETO.

THE Splitdorf Electrical Company, Newark, N. J., is marketing a new magneto, termed the EU4, which is of the true high-tension type and designed to meet the demand for an instrument providing a hot spark at all motor speeds as well as to make starting easy.



Splitdorf EU4 True High-Tension Magneto.

The new instrument is water and dust proof and is constructed throughout on a principle of strict utility combined with a neat appearance, and has sufficient reserve energy for a 30 horsepower high speed motor. The design embodies an aluminum base to which the pole pieces are secured, and between the latter revolves the armature on two annular ball bearings. The armature, after being wound, is impregnated with a heat and oil proof compound which the maker states renders it practically indestructible. Mounted over the armature is the condenser, this being clamped between two metal plates, which are secured to the pole pieces.

The magnets are of the best grade tungsten steel and straddle the pole pieces. Water, dust and oil proof qualities are obtained by fitting a cover over the end plates. The circuit breaker is attached to the armature shaft as shown in the illustration and revolves with it. Owing to centrifugal action the platinum points come in contact in a positive manner at high speeds, thus permitting the utilization of a spring with light tension, a construction reducing wear of the cam to a minimum. These and other similar refinements are stated to be the subject of patents and exclusive Splitdorf features. The break in the primary circuit is obtained by a roller coming in contact with a steel cam, separating the platinum points.

The cam holder may be shifted to the extent of 23 degrees, enabling a liberal advance or retard of the spark in timing.

A NEW MOTOR-GENERATOR.

Leece-Neville Announces Combined Lighting and Starting System for Ford Car.

The Leece-Neville Company, Cleveland, O., maker of electric dynamos and motors for automobile lighting and starting, has brought out a system for the model T Ford car, which is a unit system, that is, the generator and motor are combined; and the same attention has been given to details as with the equipment manufactured by this concern for larger machines.

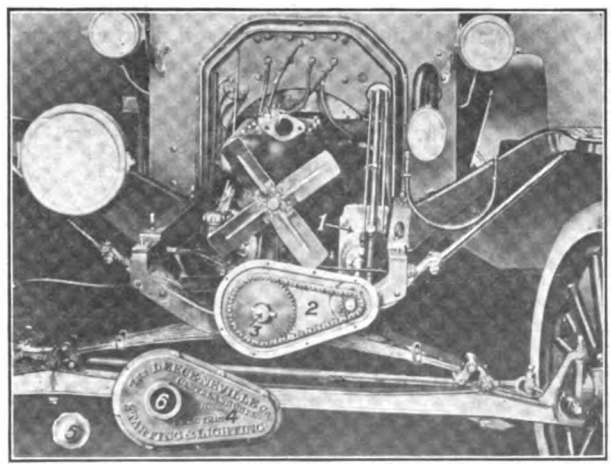
An accompanying illustration shows the Ford system installed and with its components numbered. The motor-generator 1 is mounted in a cradle under the steering column between the crankcase of the engine and the body frame. The cradle is retained securely by bolts, these being fastened to the crankcase and frame, and the installation does not require any fittings or alterations, as the old holes are utilized. New and longer bolts are provided, however, as they are employed to retain the cradle.

The chain case 2 is mounted on the front cross frame member by displacing the front end bearing of the engine, the case being provided with a bearing. The old bolts are used to retain the new bearing cap and case to the cross member. The shaft 3 extends through the hole from which the starting crank has been removed and is coupled direct to the engine shaft. The shaft from the motor-generator runs under the radiator and above the front cross frame member, and to this shaft is keyed a small sprocket. The large or driving sprocket is also keyed to the shaft 3.

Drive is by a one-inch silent chain, which operates in lubricant, insuring quietness, the mechanism being protected by the chain case cover 4, which has a hole 6 to which is fitted the screw cap 5.

The motor starter is operated by simply pushing a button, it cranking the engine at a speed of 150 revolutions a minute. Upon the engine starting, the motor functions as a dynamo, supplying energy for lighting, and charges a storage battery. The unit weighs 47 pounds, the battery 70 and the fittings about 15.

All parts are supplied complete and so arranged as to make installing an easy matter. All wires come cut to the proper length. The accessories are strictly high grade.



Leece-Neville Ford Light and Motor Starting System, a Motor-Generator Employing a Silent Chain Enclosed in a Casing.

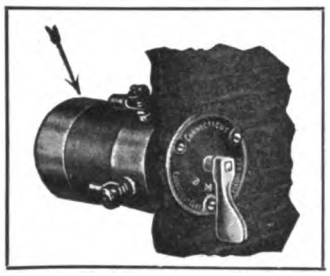
NEAT MASTER VIBRATOR.

Connecticut Is of the Flush Dash Type, Very Compact and Efficient.

The Connecticut Telephone & Electric Company, Inc., Meriden, Conn., well known to the trade as maker of Connecticut coils, dis- is manufacturing a master vibrator which will appeal to the distributors, timers, etc., criminating owner of the model T Ford car because of the neatness and compactness of the design.



The Connecticut Ford Master Vibrator.

As will be noted by the accompanying illustration, the coil is located under the hood, the switch being on the driver's side and mounted flush with the dash. All wires and connections are concealed by this method, making for a clean dash. One of the qualities of the Connecticut master vibrator is the use of the special terminals featured by this concern, which make for absolutely tight connections as well as efficiency.

The maker claims that the product is the smallest vibrator made and that it is the most powerful. Not only is synchronization of the spark obtained and starting made easier, but less current is consumed. The last named quality is important in that more light is obtained from the electric headlights and at low car speeds.

The Connecticut is constructed with the same high grade material and workmanship for which the product of this concern is noted, and the retail price is very moderate. The company has an interesting proposition for the trade, the details of which are given in its bulletin No. 48, which will be forwarded upon request.

The Connecticut Telephone & Electric Company, Inc., has also brought out a special shock absorber for the Ford car, which is constructed on the same principle as the well known Connecticut, although it is lighter. Complete details are given in bulletin No. 46.

IS NOW SALES MANAGER.

C. F. Ames Retires from Cushion Wheel Concern to Enter Tire Field.

Cortland F. Ames, who has been located at 1241 South Michigan boulevard, Chicago, as distributor of the Sewell cushion wheels for motor trucks, has resigned all connections with that product to take the position of sales manager for the Devine Tire Company. His office is now at 2021 Michigan avenue, Chicago.

The Devine Tire Company produces the Devine indestructible fabric tire, which is said to be composed entirely of cotton duck. It is maintained that it cannot be cut, torn or chipped off, under the most severe service, and that it will give maximum traction under all conditions of road surface.

FORD LIGHTING DYNAMO.

Dyneto Electric Company Marketing Complete Equipment for Model T Ford Cars.

The Dyneto Electric Company, maker of lighting systems for motor cars, is manufacturing a lighting equipment for the model T Ford automobile, which is a complete outfit, including as it does the generator, storage battery, battery box, reflectors, bulbs, tail light, wiring, terminals, etc.

The dynamo is located on the left hand side of the motor, as will be noted by the accompanying illustration. A bracket is supplied for supporting the generator, also for retaining it, and is placed with the belt pulley forward. Every part is made to fit and it is stated that the dynamo may be installed in an hour. Drive is by a one-inch endless belt, which replaces the usual fan belt, and the tension is regulated by the Ford fan belt adjustment.

The Dyneto generator weighs about 23 pounds, and combines in one apparatus a slow speed direct current generator and automatic switch, also automatic means for controlling the output to meet requirements. The dynamo is cut in at a car speed of about 12 miles an hour and at higher ratios the output is automatically controlled. Below car speeds of 12 miles an hour and when the engine is inoperative, the battery supplies current for lighting.

A dash indicator is provided, which shows at all times whether the cells are being charged or discharged, and the switch is a Briggs & Stratton, providing the usual combinations and a dimming attachment. The switch button is in the form of a plug, which can be removed to prevent tampering with the system. The factory is located at Syracuse, N. Y.

DIXON'S MOTOR GRAPHITE

Don't make the mistake of thinking that **any** kind of graphite will do in your motor car bearings.

There is only one graphite that is a **safe** motor lubricant and that is **Dixon's Motor Graphite**—the natural flake graphite ground to exceeding fineness without loss of its valuable flake quality.

Mix it in the proportion of one teaspoonful of **Dixon's Motor Graphite** to each quart of oil. Shake thoroughly before using and then handle the mixture like ordinary oil.

It will give a peculiarly lasting lubrication that will be new to your experience and that will "tune up" your whole car.

Send for "Lubricating the Motor", No. 49.

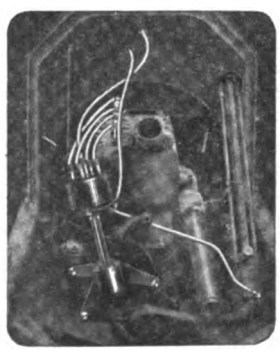
Ford Dealers and Garagemen



Equip your customers' Ford cars with the ATWATER KENT FORD IGNITION SYSTEM. Your customers can prove the following results on their own car on a make-good-or-money-back basis:—

1. **Perfect ignition at all speeds from 3 to 40 miles per hour.**
2. **Smooth running without missing or uneven firing.**
3. **Easier starting in cold weather.**
4. **Vibrator and magneto trouble eliminated.**
5. **Will run idle at lowest possible speed and throttle down to 3 miles per hour on high.**
6. **Increases both power and speed and saves gasoline.**
7. **Lessens sooting of plugs and carbon deposits.**
8. **Quickly and easily installed without altering car in any way. No machine work—no holes to drill—a wrench and screw driver are the only tools necessary.**
9. **Costs much less than a magneto and gives better results on any car.**

Let us send you Circular L describing the ATWATER KENT SYSTEM for Ford and other cars. If you are visiting the National Automobile Shows do not fail to see our exhibit—Booth 8 at the Coliseum, Chicago.

ATWATER KENT MFG. WORKS 4932 STENTON AVENUE PHILADELPHIA

Do Your Own Welding!

Save Time and Money on Repair Jobs!

Don't send out your repair work. You can now **do it yourself**—and save a lot of time for your customers and money for yourself.

Don't buy and wait for new parts! You can **make old parts as good as new** by using the

Cox Welding Outfit

(For Welding and Carbon Removing)

Complete in every detail. Will do every possible welding job. Very simple in construction. Can be used on parts of iron, steel, brass, bronze and aluminum. Any average mechanic can become adept in its use in a short time. We furnish complete instructions with each outfit. **It is safe and sure. Every job you do means**

Extra Profit for You

The outfit will pay for itself many times over. It means quick repair work—and **all of it done in your shop!**

The Cox Outfit is not only excellent for welding, but it can also be used to **Quickly and Completely Remove Carbon from Cylinders!**

Thus you have a dual outfit—a profit maker two ways! Its use is doubled. It saves time in two ways—and produces two profits!

A Money-Making Opportunity for You

Men, take your pencil and figure this:

Multiply by 4 the number of automobiles in your city. That gives the number of tires in use. Multiply that number by $5.00. What's the answer? $1,000, $5,000, $10,000, $20,000?

The total, whatever it is, is the approximate amount of tire repair business in your city. Let us equip you to do

Tire Repairing

$150.00 to $500.00 will start you off nicely.

Our patented localized steam repair outfits insure your success. Get our catalog No. 12. It's full of expert information.

CONNECTICUT

Master Vibrator For Ford Cars

The strongest proof of the superior qualities of the "Connecticut" Master Vibrator comes from the Ford owners who have tested it in actual use—day after day. The following letter from Mr. G. R. Ide of East Providence, R. I., is convincing. Mr. Ide writes:

"I received my master vibrator for my Ford car and it works perfectly great. I never knew the car to run so smoothly as it does now. Have just convinced my next door neighbor that the "Connecticut" was the proper thing for his car and so he put it on and is mighty well pleased with it too."

"Gives Magneto Service"

The "Connecticut" is the smallest, neatest and most powerful Master Vibrator made for Ford Cars. Fits flush with dash—the coil proper being located under the hood.

Quickly installed. Easy starting. Makes a sweet running motor. More light from your lamps. Sold under a guarantee.

Price $9.00 delivered

WINSOR PATENT ADJUSTABLE MOTOR VALVE REMOVER

TO USE: Remove spark plug, insert Barrel A and screw down spindle with fingers, which prevents valve from lifting. Attach adjustable chain to Lever B which revolves around the spindle A. Hook chain to adjustable Lever C. A slight depression, because of the enormous leverage obtained will compress valve spring, permitting of easy removal of locking mechanism. Note the length of Barrel A and Lever B, accommodating every type of motor.

Made in sizes to fit all spark plug openings. In ordering, state size of spark plug.
LIST PRICE—Enameled black, each $2.50. Nickel plated, each $5.00
Extra barrels, each $1.50.
Dealers, Write Today for discounts. Manufactured by
Winsor Manufacturing Co., 55 Eddy St., Providence R. I.

THE LINCOLN HIGHWAY

(Copy Contributed)

By

ELBERT HUBBARD

A. R. PARDINGTON
Vice-President and Secretary
Lincoln Highway Association
DETROIT, MICHIGAN

Dear Sir: —

I regard it as a privilege to be one of the many who will make ***The Lincoln Highway*** possible, and am accordingly sending along my check for Five Dollars as my subscription to this glorious cause.

Name .....

Address .....

.....

☐ **Check here if you will sell certificates to your friends.**

A DUSTLESS, mudless, skidless highway from the Atlantic to the Pacific---that's why I should cease to worry.

Behind the project are over 100 firms and corporations who do big things. Over $5,000,000 are pledged or in hand.

Subscriptions are asked from every cheerful sport who owns an automobile and loves the smell of gasoline. And doesn't that take in pretty nearly all of us?

(Radiator emblem sent free to each contributor. It's 6 inches wide.)

ANY man who owns a machine and doesn't get in on this is a Piker from Pikersville.

It's a privilege to get in this glorious company, and I hope every reader will send a Fiver or more and then sell some certificates to his friends.

Enjoy the sweet satisfaction of knowing that you are in this glorious company who are making the world a fit place for gentlemen to live in.

Good roads are the most unselfish enterprise in the whole world of human betterments.

PANHARD OIL

Bulletin No. 3 For Dealers

Probably you are tired of hearing about oil. It is hard to realize any great difference in quality when nearly all oils look alike, even though prices vary widely. Besides, cheap oils often carbonize no more than the better grades.

BUT---If one of your customers finds he needs new bearings after a season's run, it's ten to one he will blame the car you sold him or the repair job you did for him, though it is usually really the fault of poor lubrication.

Panhard Oil was first produced in 1904. While other brands have come and gone, Panhard has held its own,---always uniform, always the best. It will help the cars you sell and the jobs you repair to make good and satisfy your customers. Isn't this your main object?

Write for details of our selling plan, and prices at the nearest distributing point.

PUBLISHER'S PAGE

Garage System Prize Competition

FIRST AWARD, $25 SECOND AWARD, $15 THIRD AWARD, $10

For several years the Accessory and Garage Journal has published descriptions and forms of accounting systems that might be practically used or adapted by those conducting garages and public service stations, with a purpose of showing the possibilities for economy through simplified record. These systems are in use, and were published to demonstrate results from practical application. For the purpose of stimulating the interest of the trade and those engaged in general garage business, the Accessory and Garage Journal purposes to continue the publication of such systems as are adaptable, and to obtain practical suggestions from its readers offers the above stated awards to those who will submit accounting methods which can be applied by those who desire to utilize them.

The value of such records as will result in economies can be understood by every man in business. The publication of methods that serve a useful purpose will undoubtedly benefit the industry materially, from the fact that the Accessory and Garage Journal reaches every garage owner and manager in America.

Those Submitting Systems in This Competition, Must Conform to the Following Conditions

Bookkeeping Record covering the storage and care of vehicles, Repair Department, Shop Stock Room, Sales of Accessories and Supplies, Vulcanizing Department (or provisions for having this work done), Battery Charging Department (if any). Descriptions or analysis should be concisely written and accompanied by pages of all books, all forms, tags, sales slips, and cards included in the system, or by forms ruled to conform to the records in use, each form being accompanied by an explanation of its use attached to it. If drawn forms are submitted, sizes should be given.

The decision of the Editor of the Accessory and Garage Journal as to the merits of the systems will be final. The systems that have merit, and yet not awarded prizes, will be retained for publication and paid for at the rate of $5 each. Those systems not receiving an award, and which are not desired, will be promptly returned to those submitting them.

All systems, to receive consideration, must be received on or before May 1, and the announcement of the awards will be made in the May issue of the Accessory and Garage Journal.

Address all correspondence to
EDITOR, ACCESSORY AND GARAGE JOURNAL,
Times Building, Pawtucket, R. I.

THE ANNUAL EQUIPMENT NUMBER
OF THE
Accessory and Garage Journal
Will Be Published April 25

To those in the industry engaged in buying and selling, this edition will have special value and importance. It will be a trade buyer's reference for the year to come. In this number will be included all that is standard and new in car equipment and supplies, what is new in garage and public service station machine and hand tools and labor saving utilities.

For advertisers this number will have all the advantages of a trade directory, and will be issued from a mailing list that reaches every interest in the industry and trade.

This will be a manufacturer's and tradesman's issue.

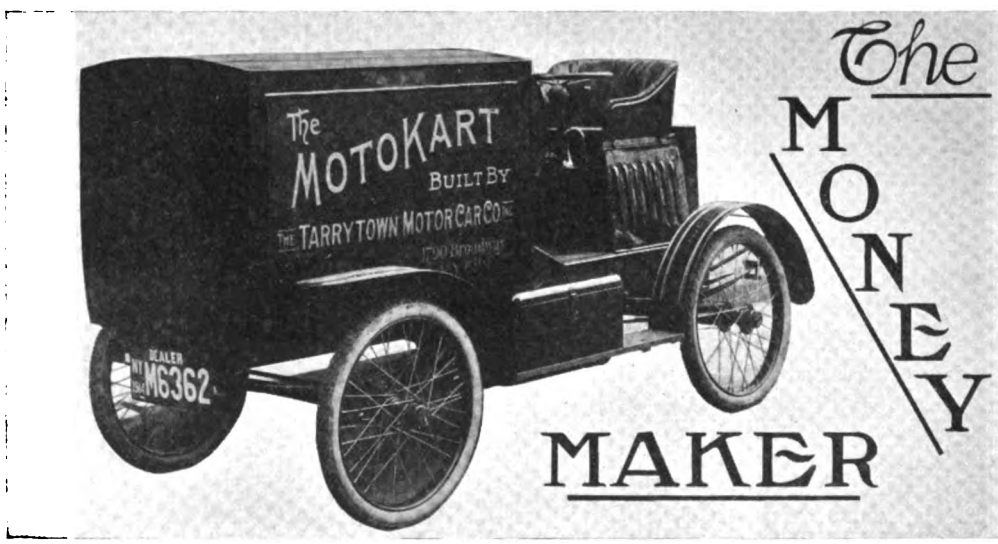
$365 THE MOTOKART $365

DEALERS' PROPOSITION



The worth while dealers, the dealers who "get there" in any line are specialists, selecting lines of merit which they know from previous experience will enjoy a widespread and constant demand; they secure the exclusive rights for certain territory, concentrating their time and efforts upon logical prospects and making money.

We have specialized upon light delivery problems. The MOTOKART is not a cycle car, it is not a miniature pleasure car converted to commercial usage, it is the only car of its type embodying a four-cycle water-cooled engine, built exclusively for commercial purposes. A chassis ideal for pleasure usage can never successfully be made the basis for a delivery car; the difference in requirements is too radical. We know nothing about pleasure cycle cars, but have devoted ourselves exclusively to the purpose of producing the best parcel delivery car at a universally acceptable price.

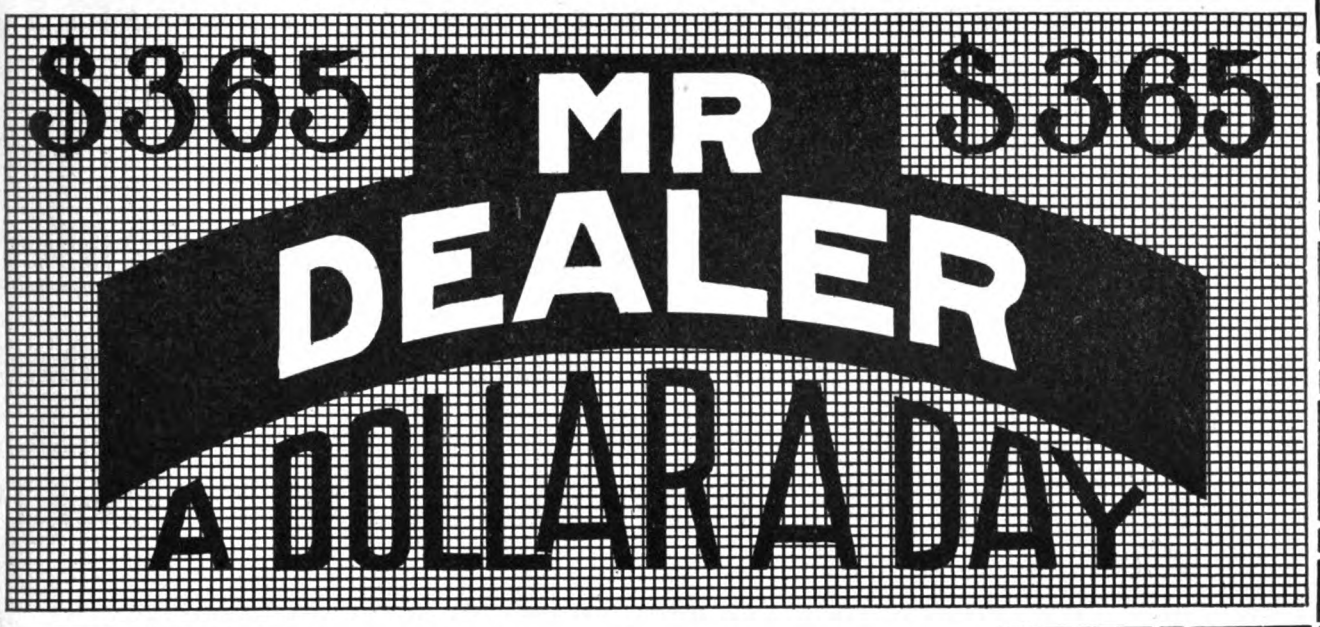
We solicit agency applications from live men who recognize the coming of the parcel car, its unlimited field, tremendous possibilities and wide adaptability.

We want sales representatives everywhere so that we can directly refer the daily increasing flood of consumer inquiries now being received in response to our general advertising campaign.

There are over 800,000 butchers, grocers, bakers, florists, cleaners and other similar tradesfolks, all with light merchandise to deliver, in the United States. How many are there in your town?

SEE SPECIFICATIONS ON FOLLOWING PAGE.

Digitized by Google



FOR A YEAR

SPECIFICATIONS

ENGINE—Two-cylinder, four-cycle, 3⅝x4. Water cooled. 10 to 12 H. P., developing a speed of 4 to 25 miles per hour upon the flat and capable of negotiating any reasonable grade.

WHEELBASE—69″, comparatively short, facilitating the handling of vehicle in crowded streets.

TREAD—44″, somewhat narrower than the regulation tread, but ample for good roads.

WHEELS—Wire construction, ball bearing, light, resilient and free running.

FRAME—Pressed steel channel, liberal section and gauge, insuring strength and rigidity.

TIRES—Motorcycle, non-skid type, 26x2½, size while ample assures low tire maintenance cost.

BODY—Steel panel construction, combining durability with light weight.

VEHICLE DIMENSIONS—Length over all 106″, height over all 56″, width over all 52″. The above dimensions render possible in the majority of cases the storage of car in store after business hours, eliminating garage expense.

BOX DIMENSIONS—Length 51″, height 32″, width 32″. This size is standard, but can be modified to suit special requirements at extra proportionate price.

FRICTION DRIVE—Giving a multiplicity of speeds and removing that bugaboo of commercial automobiles, transmission and drive gear troubles.

SPRINGS—Regular semi-elliptic, assuring ease of carriage and removing possibility of damage to even the most delicate mechandise.

CAPACITY—400 pounds.

COLOR—Maroon, special lettering or design at paint shop cost.

PRICE—Standard specifications as above $365.

Note the price, **$365.00**—a dollar a day for a year—and if you recognize that the MOTOKART has a field, the only unexploited spot in the automobile industry write us at once and we will submit agency proposition.

SPARK PLUG MAKERS ORGANIZE IN CHICAGO.

Inter-State Motor Company to Operate Plant in Muncie---New Columbus Buggy Company Is Formed---Cleveland Men to Make Kerosene Cars---Other News.

SEVENTEEN of the 31 spark plug manufacturers licensed under the Canfield patent, held by the A. R. Mosler Company, Mount Vernon, N. Y., formed the Association of Spark Plug Manufacturers in Chicago during the progress of the automobile show in that city. The new association decided on a definite policy, which is represented by the following:

To foster the interests of those engaged in the trade or business of manufacturing spark plugs or parts thereof.

To procure uniformity and certainty in the customs and usages of such trade or business.

To reform abuses relative to such trade or business.

To secure freedom of its members from unjust or unlawful exactions.

To diffuse accurate and reliable information as to the standing of merchants and others dealing with the members, and as to the condition and development of the trade or business in which the members are engaged in the United States.

To advocate the enactment of just and equitable laws affecting the members.

To settle differences between the members.

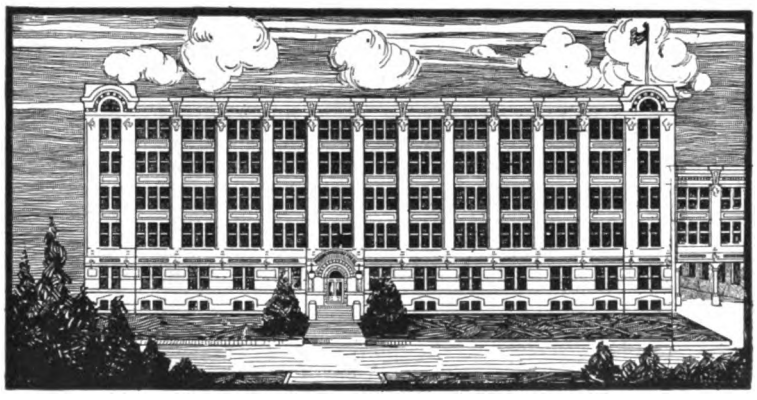
To promote a more enlarged and friendly intercourse among the members.

Only two officers appear to have been elected at this meeting, these being J. W. Fisher of the Silvex Company, New York City, as secretary, and A. R. Mosler as treasurer. A committee consisting of R. E. Mills, Rajah Company; R. A. Stranahan, Champion Spark Plug Company; Albert Champion, Champion Ignition Company; Emil Grossman, Emil Grossman Manufacturing Company, and E. M. Benford, Benford Manufacturing Company, was appointed to investigate and report on all matters relating to the spark plug industry and to bring to the notice of the association all infringers of the Canfield patent, those who are conducting their business on a false basis, or, in other words, misrepresenting their products, and those who are in any way harmful to either the industry or the consumer's welfare.

HANDSOME OFFICE BUILDING.

New Departure Manufacturing Company Soon to Celebrate Its Silver Anniversary.

Some 25 years ago, the New Departure Manufacturing Company, Bristol, Conn., maker of New Departure ball bearings, etc., started business in a small room containing less than 60 square feet. It is now about to celebrate its silver anniversary by opening the handsome new administration building shown in an accompanying illustration. The present plant occupies nearly 60 acres, with several millions of dollars invested in machinery, operated by 2000 skilled workmen, busy day and night a greater part of the time, showing a splendid growth in business.



New Administration Building of the New Departure Manufacturing Company, Bristol, Conn.

Beginning Jan. 1, changes were effected in the organization, which are expected to still further develop the possibilities of the plant. Albert F. Rockwell retains the position of president, but has been relieved of certain managerial duties. Secretary DeWitt Page has been appointed gen-

Digitized by Google

eral manager and Treasurer Charles T. Treadway becomes chairman of the board of directors.

MRS. HACKETT LEFT PENNILESS.

Well Known Tire Sales Manager's Widow and Child in Extreme Need.

Circumstances resultant from the death of William J. B. Hackett, sales manager of the Cataract Tire & Rubber Company, at his home in Boston, Dec. 19, are such that the Accessory and Garage Journal is impelled to make them known, because there is no doubt that those who knew and appreciated Mr. Hackett in life will be disposed to manifest their friendship in a manner that will benefit his widow and a three-year-old daughter.

The Late William J. B. Hackett.

Mr. Hackett was an extremely likeable man, enterprising and industrious, and was but 28 years of age when he succumbed to an illness that had continued eight months. His sickness exhausted his resources and when he died Mrs. Hackett and the baby were left without even sufficient funds to defray the burial expense. Mrs. Hackett has no people to whom she can turn for assistance, and she is penniless and in great need of substantial aid.

Mr. Hackett was widely and favorably known, and there are undoubtedly those who will consider the circumstances in which his widow and child have been placed a reason for contributing liberally to her relief. Those who wish to assist her can send contributions to Paul M. Foss, attorney-at-law, 31 State street, Boston, Mass., or to Mrs. Gertrude C. Hackett, 19 Norway street, Boston.

INTER-STATE PLANT SOLD.

Purchase Price Was $215,000—New Company Formed to Take Over Production of Cars.

Frank C. Ball, a well known glass manufacturer, has purchased the factory and grounds of the Inter-State Automobile Company, Muncie, Ind., for $215,000. Charles A. Finnegan was bidding against Mr. Ball, with whom was associated Thomas F. Hart, principal owner and general manager of the Inter-State company. Mr. Finnegan some time ago bought the property of the E. R. Thomas Motor Company, Buffalo, N. Y. Mr. Finnegan submitted a sealed bid of $155,000 and Mr. Ball a sealed bid of $150,000. These were rejected and an auction conducted.

Mr. Ball announces the organization of the Inter-State Motor Company, which will operate the plant. The following are the directors: George A. Ball, E. B. Ball. Frank C. Ball, J. M. Maring, Theodore F. Rose, F. D. Rose and B. W. Twyman. The last named has been installed as general manager in charge of production and sales.

COMPLETES REORGANIZATION.

New Columbus Buggy Company Starts Business in Columbus, O., with Capital of $500,000.

The New Columbus Buggy Company, Columbus, O., was incorporated recently with capital of $500,000, all common stock. It is understood that this stock is held by about 85 per cent. of the creditors of the former concern, who have been operating the plant for the past eight months. It is further stated that the claims against the old company amounted to $464,000, which will be taken up, leaving a balance of $36,000 for organization expenses.

The officers of the new company are: President, George W. Lattimer; vice president, E. R. Sharp, secretary, D. N. Postlewaite; treasurer, George W. Bright. The board of directors is composed of the following: O. A. Miller, George W. Bright, George W. Lattimer, E. R. Sharp, F. O. Schoedinger, Robert H. Jeffery and T. J. Cavanaugh.

TO BUILD KEROSENE CARS.

Richard Automobile Manufacturing Company Is Organized in Cleveland, O., for That Purpose.

The Richard Automobile Manufacturing Company has been organized in Cleveland, O., for the purpose of producing a kerosene burning car, designed by Francois Richard, a French engineer, who has been in this country for a number of years. The company has capital of $250,000, and it is understood that F. M. Brady of the Cleveland Brick & Clay Company, and G. C. Gordon of the Park Drop Forging Company, are associated with Richard in the enterprise.

An experimental car is said to be under construction in New York City. The machine will utilize a carburetor and a motor designed especially to utilize the cheaper fuel, and Richard states that he expects that with a four-cylinder, four-cycle motor, having horsepower of 90, he will get 30 miles to the gallon of kerosene. The car will be produced in one chassis model, of 128-inch wheelbase, and with a seven-passenger touring body.

NEW FACTORY READY.

Teetor-Hartley Motor Company to Take Over Business Heretofore Conducted by Older Concern.

The Teetor-Hartley Motor Company, Hagerstown, Ind., has its new factory building completed and preparations are being made for its immediate occupancy. It is a three-story structure, 144 feet long by 66 feet wide. The management remains unchanged, the following officers having been re-elected at the first of the year: President, J. H. Teetor; vice president, H. W. Keagy; secretary, C. N. Teetor; treasurer, W. E. Immel.

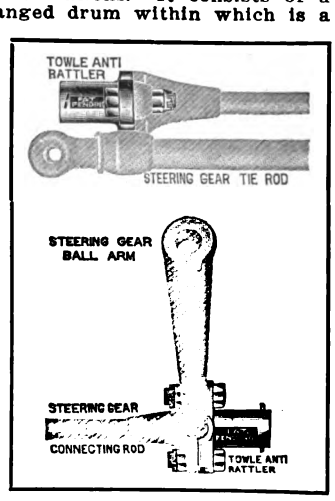
All business heretofore carried on by the Light Inspection Car Company will be taken over by the new organization, and an official announcement has been made that the offices and business of the company will continue to be conducted at Hagerstown. The concern produces the well known Teetor T head motor, invented by C. N. Teetor in 1898, and a line of inspection cars used on railroads.

TOWLE ANTI-RATTLER.

Towle Manufacturing Company Issues Warning to the Trade on Its Patented Ford Device.

The Towle Manufacturing Company, Portland, Me., maker of the Towle anti-rattler for the Ford steering gear, is issuing a warning to the trade not to manufacture, sell or handle any attachment infringing on the patent rights of its device. Letters patent No. 1,084,567 were granted Jan. 13.

The Towle anti-rattler is constructed both for the steering gear connecting rod end and the tierod, as shown in accompanying illustrations. It consists of a casting composed of a flanged drum within which is a socket held in place by a stiff spring. The tension of the spring is adjustable by means of a threaded plug screwed into the bottom end of the casting and held in place by a slot through which a cotter pin is passed. The flange of the casting is designed to permit of using the regular bolts and other section of the connecting rod and without fitting or alteration.



Towle Anti-Rattler for Ford Steering Gear.

The Towle anti-rattler, as the name implies, is designed to prevent rattling and to eliminate any lost motion due to wear of the original parts. The spring holds the ball snugly in place, and also serves as a shock absorber, preventing vibrations from being communicated to the hands of the driver. Wear is compensated for by adjusting the screw plug. The company calls attention to patents pending in England and Canada.

Digitized by Google

ANNOUNCES FORD SYSTEM.

Gray & Davis Perfects Starting and Lighting System Which May Be Installed on Used Cars.

Gray & Davis, Inc., Boston, Mass., announces that it has designed and perfected a starting and lighting system for Ford cars, which is extremely simple and compact, and can be installed by any mechanic or garage in a few hours. It may be installed on any used Ford car, as well as new machines.

This new system was designed and developed by Alexander Churchward, chief engineer of the company, and it is expected its announcement will cause widespread interest.

EUCLID MOTOR CAR COMPANY.

Men Prominent in the Industry Organize Cyclecar Concern in New Haven, Conn.

E. S. Cameron, organizer of the Cameron Manufacturing Company, New Haven, Conn., has recently entered the cyclecar industry, together with Frank S. Corlew, formerly sales manager of the Cameron company; E. A. Scheu, general manager of the Invader Oil Company, and Charles F. Kellom, Philadelphia. These men have formed the Euclid Motor Car Company, for the purpose of manufacturing a cyclecar of that name, which will be sold for $395.

The little vehicle, which will have a 40-inch tread and 96-inch wheelbase, will be manufactured at the Cameron plant in West Haven. The company's general office will be located at 80 Broad street, New York City.

DISCOVERS NEW FUEL.

Will Require Special Carburetor, as It Is Too Heavy for Those Now in Use.

H. T. Cauller of Trenton, N. J., claims to have evolved a new automobile fuel, which he says can be produced with less expense than gasoline and possesses three times the power and efficiency of any fuel now used.

The new fuel is described as a jelly like substance, and the inventor says it will be necessary to construct a special carburetor, as it is too heavy to be carburetted successfully with the present instruments. He has filed an application for a patent.

MOTORCYCLE PLANT SOLD.

Bosch Magneto Company Buys Brockton Factory and Disposes of It Again.

The property of the American Motor Company, Brockton, Mass., which was sold under mortgagee's sale Jan. 20, was purchased by the Bosch Magneto Company, New York City, and immediately transferred to G. M. Green and William T. Marsh, the latter treasurer of the first named concern.

It is understood that steps are under way for a reorganization of the company. Mr. Marsh is authority for the statement that the name of the new concern will be the Sterling Manufacturing Company.

GENERAL NEWS OF THE MANUFACTURERS.

The Metropole Motors Corporation, New York City, is looking for a new factory site, as the company has outgrown its present quarters in Long Island City. The company employs between 250 and 400 skilled mechanics and makes a $1500 automobile.

Edsel Ford, Detroit, Mich., son of Henry Ford, president of the Ford Motor Company, will head the new company for the manufacture of a light weight, low priced electric automobile. This new car will be designed to take a battery made exclusively by the Edison Storage Battery Company. It is expected that these cars will be ready for the market some time during the next year. They will be manufactured in Detroit and will sell for about $600.

The General Motors Company, Pontiac, Mich., reports that the first four months of the current fiscal period, which began Aug. 1, 1913, produced gross sales of $25,307,941, against $20,252,389 for the same months of 1912. This is an increase of $5,055,552. During August, September, October and November the company sold 18,078 cars, which compares with 13,508 in the same period of 1912, an increase of 4570 cars.

The Driggs-Seabury Ordnance Corporation, Sharon, Penn., has been awarded a contract for the manufacture of 3000 Twombly light cars by the Twombly Car Corporation, New York City. The order will necessitate a large increase in the factory force.

Barthel & Daly, 42 Broadway, New York City, importer of Schafer ball bearings, announces that Charles E. Wade of the Charles E. Wade Sales Company, Detroit, has been appointed sole selling agent in the Middle West. Mr. Wade was formerly selling agent for the Rhineland Machine Works Company.

The Platt & Washburn Oil Company, New York City, is a strong factor in the automobile oil field. This company was incorporated in 1885 and has for some time been working to develop a superior line of motor lubricants refined from the best Pennsylvania crude oil. From practical research in shop and laboratory these oils are said to show splendid results in efficiency and economy in the lubrication of pleasure cars and especially motor trucks.

S. F. Bowser & Company, Fort Wayne, Ind., recently held its annual convention of the Pacemakers Club. A. Z. Polhamus, general manager of the company, announced that sales for 1913 had fallen just a trifle short of the $4,000,000 mark. Six thousand dollars were distributed among the salesmen for increasing the volume of business.

The Augusten Rotary Valve Engine Company, Marshfield, Wis., has received its letters patent on its new motor, and is now engaged in the manufacture of several demonstration models in various sizes, preparatory to beginning a large production for the market.

The Knoohook Rubber Company, St. Louis, Mo., has purchased the stock of the Holtzmann Auto Supply Company at Campton avenue.

The Superior Motor Specialty Company, Philadelphia, controls a double-contact ignition device to be used on automobiles. This concern is capitalized for $250,000 and the plant is located on Fourth street.

The Sandusky Auto Parts & Motor Truck Company, Sandusky, O., held a meeting recently and Edward S. Stevens, attorney, was appointed trustee. An effort will be made to bring about the sale of the plant. The validity of the $117,500 worth of bonds issued to creditors is to be tested. It is contended that they constitute avoidable preferences. The total liabilities, it is said, may exceed $300,000.

The Thomas B. Jeffery Company, Kenosha, Wis., recently sold 6000 cars in 60 days. The Jeffery Company ushered in the New Year with the factory working New Year's Day, to fill orders for immediate shipment. This company is the maker of the Jeffery four and six.

The Stafford Motor Car Company, Kansas City, Mo., will increase its output this year to about 125 cars, according to announcements made recently. Two models will be built, a five-passenger touring car and a two-passenger roadster, both with four-cylinder, valve-in-head motor rated at 40 horsepower. The new models will have a wheelbase of 115 inches and the cylinder bore will be 4.25 by 5.125.

The United Electric Light & Power Company, New York City, has established an electric bureau for the purpose of furthering the sale and use of electric vehicles in that city, and co-operating with companies distributing vehicles and their accessories, as well as with the garages and owners of vehicles. The bureau will collect transportation and operating data and make it a point to interest owners of horse-drawn vehicles in "doing it electrically." David E. Tobias is the manager.

The Power Gas Products Company, Minneapolis, Minn., has opened general offices in the Plymouth building. The company manufactures a liquid designed to increase the gasoline mileage for automobiles and motor boats.

The Stewart-Warner Speedometer Corporation, Chicago, has opened a large number of additional branches. The company has already opened 53 service stations and proposes to increase the number to 100.

The Winton Motor Carriage Company, Cleveland, O., has opened a branch house at Los Angeles, Cal.

The Cole Motor Car Company, Indianapolis, Ind., has established a distributing agency at Parkersburg, W. Va., and E. E. Wilson is manager.

The Stegeman Motor Truck Company, Minneapolis, Minn., has been reorganized.

The Century Electric Car Company, Detroit, will establish an agency at 410 Newbury street, Boston, Mass. The company proposes to open agencies in all of the principal cities throughout the United States.

The Poughkeepsie Utilities Corporation, Poughkeepsie, N. Y., has taken over the interests of the National Automobile Rim Company, and will start a new factory in that city in the spring. The present factory is located in Milwaukee, with a large storehouse in Cleveland.

The W. Dewees Wood Plant of the American Sheet Steel Company, McKeesport, Penn., has started 10 additional sheet mills on account of the present heavy demand for sheet iron for automobile body construction. These new plants employ about 600 men. It is said that the bulk of the present output of this plant is on orders from automobile manufacturers.

The Invader Oil Company of New York City has concluded arrangements with the James Bailey Company, Portland, Me., which will handle its products for the state on an exclusive selling basis for 1914. Arrangements have also been made with George Collins, 284 Columbus avenue, Boston, Mass., to take care of all local business in that district.

The Detroit Steering & Windshield Company, Detroit, has changed its name to the Metalwood Manufacturing Company.

The Crown Motor Car Company, Louisville, Ky., manufacturer of the Crown cars, is planning to remove to Hamilton, O.

T. A. Hoover and E. G. Parsons, Fresno, Cal., have formed a partnership and the company will be known as the Hoover-Parsons Spring Company, to manufacture springs for automobiles.

The Pacific KisselKar Branch at San Francisco, Cal., held an automobile show recently. The occasion was the opening of the company's new service building, the largest on the Coast.

The Paige-Detroit Motor Car Company, Detroit, maker of Paige cars, has opened its new factory. The main building is 816 feet long and 60 feet wide, three stories in height, and there is a wing of 120x60 feet. One of the unique features of this new equipment is that occupancy is had without one dollar to be paid out of the profits of the cars built in the future.

The Portage Rubber Company, Barberton, O., has decided to build an addition to its plant at a cost of $25,000.

The White Company, Cleveland, O., maker of White pleasure cars and trucks, was recently the "victim" of a pleasant surprise party, when 84 merchants, bankers, lawyers, farmers and men in other walks of life from Des Moines and Oskaloosa, Ia., in charge of O. F. Shee, Central Iowa distributor for White products, arrived at the factory in two special railway cars. The officials of the company soon recovered from the surprise sufficiently to escort the party about the plant, show them everything there was to see, and get them to pose for a picture, which last named is reproduced herewith. In addition, they were entertained by a tour of the city in White omnibuses, and by a luncheon at the Cleveland Athletic Club.

Delegation of Iowa Men Which Recently Tendered the Officials of the White Company, Cleveland, O., a Novel Surprise Party.

The Hyatt Roller Bearing Company, Newark, Detroit and Chicago, is distributing a handsome folder, containing a reproduction of Sun Yat Sen, provincial president of China, and Vice President Drake of the Hupp Motor Car Company, Detroit, in a Hupmobile on the streets of Shanghai, China. Of course, attention is called to the fact that the car in question is fitted with Hyatt roller bearings.

The Maccarr Truck Company, Scranton, Penn., which moved recently from Allentown, where it had been operating since 1904, is having new and up-to-date machinery installed in its new manufacturing plant recently completed.

The McCormick Manufacturing Company, Dayton, O., and the Eastern Machine Screw Corporation, New Haven, Conn., have taken out spark plug licenses under the Canfield patent, held by A. R. Mosler & Co., Mount Vernon, N. Y.

The Titan Storage Battery Company, Baltimore, Md., has leased three buildings in Newark, N. J., which, when equipped, will be utilized for the manufacture of storage batteries. The buildings acquired were a part of those which at one time were occupied by the Titan Steel Works. Henry Keith of New York is president of the company.

The H. Lund Smith Company, Paterson, N. J., manufacturer of windshields, tops and other equipment, has purchased the plant of the Paterson Manufacturing Company of that city. The latter concern manufactures leather and fabric novelties, and the acquirement of the plant will permit the H. Lund Smith Company to produce slip covers, hood and tire covers and similar specialties.

The Electric Auto-Lite Company, Toledo, O., engaged in the manufacture of electric starting and lighting devices, has increased its capital stock from $100,000 to $225,000.

The U. S. Ball Bearing Company, Oak Park, Ill., announces that since Jan. 1 the product of the company is being marketed by its own sales force, with headquarters at the home office in Oak Park. The company had been represented by Denton & Flagg.

The Lyons-Atlas Company, Indianapolis, Ind., has issued the Lyons-Atlas News, which will be published as a regular house organ by the company. It is well edited and contains a number of articles of interest to dealers and owners of Lyons-King cars.

The Presto Inter-Rim Company, Boston, Mass., has made arrangements with the Cleveland Welding & Manufacturing Company, Cleveland, to manufacture the Presto rim. The Cleveland company was one of the pioneers in the rim field, and is equipped to build the Presto rims in large quantities. The Presto Inter-Rim Company has also closed with the American Distributing Company, Jackson, Mich., to handle the sale of the rims in the West.

The Timken Roller Bearing Company, Canton, O., has found it necessary to build a large addition to its plant. The new structure is one story high, with a ventilator above its centre for light and ventilation.

The Doehler Die Castings Company, Brooklyn, N. Y., recently made arrangements for a branch factory at Toledo, O., and already has found it expedient to double the capacity first provided for in the plans. Instead of only having 10,000 square feet, the new structure will provide 20,000 square feet, under the general management of H. B. Griffin, vice president of the company.

The Republic Rubber Company, Youngstown, O., maker of the well known Republic Staggard Tread tires, has recently placed upon the market a tire designed especially for the Ford cars.

The Wasatch Motor Manufacturing Company, Salt Lake City, Utah, will erect a factory on State street, for the manufacture of its trucks.

The Way Muffler Company, Philadelphia, Penn., is considering the establishment of its plant at Wilmington, Del. The company has taken the matter up with the Chamber of Commerce.

The Rex Ignition Manufacturing Company, New York City, has had its Rex spark plug licensed by A. R. Mosler & Co., Mount Vernon, N. Y., under the Canfield patent, No. 612,701.

The Anderson Electric Car Company, Detroit, Mich., manufacturer of Detroit electric cars, has been working overtime for two months and orders for December were 20 per cent. in advance of the same month in 1912.

The Goodyear Tire & Rubber Company, Akron, O., will add 2500 men to its payroll and thus restore its normal force to 8000.

The Henry B. Johnson Economizer Company, Philadelphia, has opened its new factory for the manufacture of a fuel saving device for automobiles. The plant is located at 1510 Brandywine street.

The Haney Rescue Apparatus Company, Tampa, Fla., is to establish factory buildings in that city to cost about $75,000, and to be equipped with $75,000 to $100,000 worth of machinery for manufacturing automobiles, trucks, fire apparatus and outside fire elevators.

The Willard Storage Battery Company, Cleveland, O., has moved its Detroit branch from 1191 Woodward avenue to 736-740 Woodward avenue.

The Schaefer Sales Corporation, Detroit, manufacturer and distributor of the Tell-Tale gasoline gauge and Kum-A-Long tire chain attaching device, has moved its office from the Elks Temple building to 605 Woodward avenue.

W. H. Radford, formerly consulting engineer and factory manager of the Warren Motor Car Company, has opened an office at 500 Moffatt building, Detroit, and is working on designs for a low priced car which will be placed on the market as soon as the experimental models are completed.

W. H. Radford, Now Engaged in Designing a New Low Priced Car.

John Frederick Strough, Canton, O., accountant of the Timken Roller Bearing Company, was married in Kalamazoo, Mich., Jan. 3, to Miss Frances Marion McKinney.

Thomas A. Doyle has severed his connection with the Ford Motor Company, Detroit, and has taken the agency for Saxon cars for Michigan. He hopes to open retail salesrooms in Detroit soon.

Bernard Ginsburg, general manager of the Detroit Auto Specialties Company, Detroit, has been elected president of the Public Library Commission of Detroit for the ensuing year.

Cyrus E. Mead, vice president of the Mead Engine Company, Dayton, O., and designer of the Mead rotary valve engine, was killed in an automobile accident recently. Mr. Mead played an important part in the development of the rotary valve motor, and before entering upon consultation work in Dayton he had extensive experience in street railway, electric and gas lighting and producer gas power plants.

Frank X. Mudd, a member of the Chicago Automobile Club and Chicago Motor Club, has been appointed chairman of the touring information board of the American Automobile Association. He succeeds Howard Longstreth of Philadelphia, who has been at the head of this committee for the past three years.

William Sparks, Jackson, Mich., president of the Sparks-Withington Company, has been elected president of the Chamber of Commerce of that city.

Carl Flinterman, Detroit, has been appointed general manager of the Detroit Pressed Steel Company. The action was taken at the annual meeting of the company.

S. W. Rushmore of the Rushmore Dynamo Works, Plainfield, N. J., has sailed for Italy, to place contracts for the concern's starting system with foreign car manufacturers. The Rushmore system has already been adopted by the Fiat and Lancia companies as regular equipment. After visiting the Italian factories, Mr. Rushmore intends to visit Paris and London.

W. H. Van Dervoort, President, Moline Automobile Company.

W. H. Van Dervoort, president of the Moline Automobile Company, East Moline, Ill., has such faith in the Moline-Knight engine, which recently underwent a world's record test in the laboratory of the Automobile Club of America, that he has posted $10,000 in a challenge to all makers of poppet valve motors, regardless of price, piston displacement or number of cylinders, to repeat the performance.

Charles T. Lawton, Boston, Mass., has severed his connection with the Bi-Motor Equipment Company to become associated with the Wetmore-Savage Company of that city.

Leighton Dunning, formerly connected with the engineering department of the General Electric Company, New York City, is now in charge of the laboratory and testing plant of the American Bronze Company, Berwyn, Penn.

H. S. Wood, Brooklyn, N. Y., has been appointed manager of the Firestone Tire & Rubber Company.

Henry J. Snider, Boston, Mass., has accepted a position as salesman with the Lawrence & Stanley Company, which handles the Mitchell cars in Boston and surrounding territory.

E. B. Brokaw, Findlay, O., has been elected president of the United States Auto Lock Company of that city.

B. A. Rhoades has been elected president of the Stoddard-Dayton Maxwell Repair Company, which was recently organized at Dayton, O. E. Gerspacher is secretary-treasurer.

L. C. Dodge, manager of the Boston branch of the Oldsmobile Company, has been transferred to San Francisco and his place in the Hub has been taken by F. A. Gross, who was sent there from the factory.

W. H. Gray, until recently sales manager of Gray & Davis, Inc., has been made general manager of the company, with headquarters in Boston. Mr. Gray, while exercising general supervision over the organization, will keep in close contact with the sales end of the business and direct the selling policy of the organization as heretofore.

Frederick E. Moskovics, one of the best known automobile men in the industry, has joined the organization of Nordyke & Marmon Company, Indianapolis, manufacturer of the Marmon motor car.

Alden M. Blake, district manager for the Willys-Overland Company in Western Missouri, died recently at Marysville, Mo., of heart disease. He was one of the best known and most successful men in the automobile business in Kansas City.

Aaron De Roy, president of the Aaron De Roy Motor Car Company, Studebaker distributor in Pittsburg, Penn., has been elected president of the Pittsburg Automobile Show Association, vice W. N. Murray, who declined re-election.

W. N. Murray, Retiring President, Pittsburg Automobile Show Association.

William G. Rankin, Providence, R. I., formerly in charge of the automobile supply department of Belcher & Loomis, has associated himself with A. E. Goodby, where he will have charge of the automobile supply department.

W. L. Walls, Detroit, is now with the Detroit Cyclecar Company, acting in the capacity of sales manager.

Harry Allen, New York City, has joined the Field Omnibus Company of that city, as designing engineer and factory supervisor. He was formerly chief draftsman of the Pope Manufacturing Company and held that office for nine years.

A. C. Westfall, traffic manager of the Cadillac Motor Car Company, Detroit, was elected chairman of the Detroit traffic committee of the National Automobile Chamber of Commerce.

J. B. Dudley has been appointed sales manager of the Lincoln Motor Car Company, Detroit, which is manufacturing a car to sell at $500.

Jack L. Glazier, Portland, Ore., will have charge of the truck department of J. W. Leavitt & Co.'s branch in that city. Mr. Glazier was formerly manager for the Speedwell Motor Company in San Francisco, Cal.

Giles H. Stillwell, who has been a director of the H. H. Franklin Manufacturing Company and the Franklin Automobile Company, Syracuse, N. Y., and vice president of the latter concern, recently gave up active engagement with these companies to assume his new duties as corporation counsel of the city of Syracuse. President H. H. Franklin of the Franklin Company gave a dinner in honor of Mr. Stillwell, which was attended by the officers and directors.

Edward Knauss, Boston, is having a lively demand for the K. P. foot rest heater, a very useful accessory in cold weather. This simple and effective device is sold at a popular price. Mr. Knauss is located at the Motor Mart, Park square.

NEW CONCERNS AND BUSINESS CHANGES.

NEW GARAGES AND REPAIR SHOPS.

The Paris Auto Company, Paris, Ill., will open a new repair shop on North Central avenue.

Colburn & Son, Alturas, Cal., is preparing to open a garage in that town.

Charles A. Bowers, Whittier, Cal., has opened a repair shop at 126 North Washington avenue.

B. W. Livingston & Sons, Lestershire, N. Y., is conducting a garage on Baldwin street.

The Piqua Auto Sales Company, Piqua, O., has located its business at 431 Main street. A modern vulcanizing plant will be installed. Walter R. Snyder is the proprietor.

Campbell & Mong, North Baltimore, O., has opened a garage on North Main street.

R. E. Reynolds, Charles City, Ia., will open a garage on Water street.

Harris & Cate is preparing to open a new garage in Umatilla, Fla.

The Acorn Automobile & Storage Company, St. Louis, Mo., has leased the building at 3213 Olive street and will open a storage and repair shop.

The Bond Motor Company, Fargo, N. D., is located in its new modern garage at 219 N. P. avenue. The company handles the Jackson and Hupmobile cars.

The Pacific Car Company, Seattle, Wash., is now located in the new building on Harvard avenue. Repair and overhauling depots have been installed.

Louis A. Pachecho, Oakland, Cal., has opened a repair shop and general auto business and will operate under the name of the Louis Pachecho Automobile Company.

The White Garage, Creston, Ia., has been opened at 316 West Montgomery street. Robert S. Harshaw is the proprietor.

The Aylmer Motor Company has opened an up-to-date garage in Fargo, N. D.

The Briscoe Motor Company, Fredericksburg, Va., has opened a garage and salesrooms at Commerce and Winchester streets in the building formerly occupied by Boulware's garage. The company handles the Buick car.

Myers & Winkley, Marion, Kan., has leased the garage adjoining the Record office. It handles the Ford car.

Graham & Seale is planning to open a new garage in Lebanon, Tenn., in the near future.

J. P. Wouten, Abilene, Tex., has purchased a garage here and will call it the Auto Mart.

N. M. Cory and Homer Stanley, Oskaloosa, Ia., have opened a new garage and automobile agency on South First street.

I. T. Bogard, West Jefferson, O., has leased a portion of the building now occupied by the Novelty Sign Company, Kenton, O., and will open a garage, handling automobile supplies and accessories. The garage will have the unique name of "The Only".

J. J. Carson, Findlay, O., has purchased the Sterling barn at Bowling Green and will convert it into an up-to-date garage, where he will conduct a general automobile business.

A. A. Linfor, Clarion, Ia., has leased a building and will open a garage.

J. H. Sprague, Clinton, Ia., has opened a new and modern garage on South Quincy street, and is now ready for business.

Erich and Lewis Charlson, Randall, Ia., will open a garage in the near future.

The Commercial Auto Repair & Storage Company, 161 East Larned street, Detroit, Mich., has opened a new and spacious garage. The building offers accommodations for the storage of 150 cars and the repair of all makes of cars.

Clifton Friend, Lancaster, O., has opened a garage and tire vulcanizing works at 531 East Main street.

Digitized by Google

Edward Coffey, Plattsburg, N. Y., has opened a new auto supply and repair shop at 67 Clinton street.

Mankin & Connell, Philadelphia, Penn., has opened a magneto service station at 1416 Vine street.

GARAGE TRANSFERS.

The Western Michigan Cadillac Company, Grand Rapids, Mich., has succeeded the Central Auto Company, taking over the garage now being erected on Legrave avenue, which, it is expected, will be ready for occupancy about March 1. No change has been made in the personnel of the company, each member continuing to devote his energies to the Cadillac.

H. DeCamp, Gaffney, S. C., has purchased the Holmes garage on Limestone street and will change the name to Gaffney garage.

M. E. Rafferty & Son, Sullivan, Ill., has purchased the Manley-Wilkins garage at Mount Carmel, Ill., and will conduct the business in an up-to-date manner.

Charles Davis and J. Harvey Rinker, Martinsburg, W. Va., have entered the garage trade in that city. They have purchased the Shenandoah garage.

W. J. Damoth, Grand Rapids, Mich., has purchased the garage of Edwin Mosher at Lake street and Diamond avenue, southeast.

Huhn & Magee, Glendora, Cal., has sold the Central garage to T. S. De Weese. The latter has taken charge and will operate it.

William Tennill, Taylor, Tex., has purchased the Dan Nowlin garage, better known as the Star garage, on East Fifth street. Barney Benefiel will be in charge of the repair department.

The Barringer Garage Company, Charlotte, N. C., is to take over the garage and supply end of the business of

Harry S. Houpt, Inc., New York Lozier Agency.

the Osmond L. Barringer Company. It will be located at 7-11 West Eighth street.

I. W. Phillips & Sons, Orlando, Fla., has purchased the garage of the Orlando Automobile Supply Company in that city.

The Norton Taxi Motor Company, Providence, R. I., has acquired the property and business of the Narragansett Hotel garage, the purchase having been made by Michael W. Norton. The business will be conducted at the present quarters.

E. C. Washington, Fresno, Cal., connected with the Washington Carriage Works, has purchased the Enterprise garage at Madera City, Cal.

Paul J. Scholz & Co., which operates a large and up-to-date garage in Whiting, Ind., has turned over its automobile business to William Zimmerman, who operates a garage on the boulevard. The two garages will be consolidated under his management, as Scholz & Co. has found it impossible to take proper care of its automobile business, because of other large interests requiring attention.

G. H. Crosby, Pomona, Cal., has sold his garage on Main street to H. A. Bowman and Lee Williams.

Comly S. Nagle, Pottstown, Penn., has purchased garage of Paul Dunlap, previously known as Dunlap & Cunningham, 115 High street, and has taken possession.

Ralph Sifford, Anna, Ill., has purchased the Hoffner garage and plans to reopen it soon.

The Jordan Auto Company, Willimantic, Conn., has purchased the automobile business of E. P. Chesbro Company, Main street.

M. Cornell & Co., Grafton, W. Va., has purchased the garage of the Grafton Motor Company, and will put in a full line of machinery and cars.

Wilbur Hunter and Harry Meyer, St. Marys, O., have taken over the auto supply store of Charles Wirtz, and will operate it in connection with their garage business.

George Hiner, Manhattan, Kan., has sold the Golden Belt garage to Leonard Anderson and William Strassen. Cole and Maxwell cars are being handled by **Mr. Hiner,** who retains the agency for these lines.

Charles M. Dodd, Houston, Tex., has purchased the Texauto Company on Main street and will conduct the business as a garage in the future. He will also conduct an automobile exchange.

The Genesee Motor Car Company, Syracuse, N. Y., has taken over the garage building at 428-434 East Jefferson street and will remove at once.

William Busick, Fort Morgan, Ia., has purchased the garage of the Hawkeye Company and will operate the business hereafter.

L. F. Baumann, Trenton, N. J., has taken over the garage at 210 West Hanover street and will handle a full supply of automobile accessories. A first class repair shop with new up-to-date machinery has also been added.

The Chalmers-Syracuse Company and the Onondaga Motor Company, Syracuse, N. Y., have merged and will occupy a new garage at 547 South Clinton street.

M. G. Hastings, Potsdam, N. Y., has become owner of the Island garage on Maple street and is installing new machinery and making other improvements in the building. The new owner will handle the Buick cars.

Shank Bros., Huntington, W. Va., has purchased the M. & M. garage and will operate it in the future.

Charles Kentopp, Falls City, Neb., has purchased the Central garage from William McDougal.

C. E. Drace, Pomona, Cal., has taken over the Pomona garage.

Haley & Sheraton, Everett, Wash., has purchased the garage and business of the Ferrell Auto Company, and will continue business in the old and new places.

D. Johnson, Meadville, Penn., has purchased the Robert garage on North street and will engage in the automobile business. The name has been changed to the Universal garage.

MISCELLANEOUS BUSINESS CHANGES.

The Hickman-Lauson-Diener Company, Milwaukee, Wis., agent for the Ford cars, has secured temporary quarters on Chestnut street.

The Binghamton Motor Car Company, Binghamton, N. Y., has leased a store building at 59 North avenue and will open an automobile and supply store.

The Erie Taxicab Company, Erie, Penn., will be located in a new building which will be erected at 14th street. The company's former garage at 120 West 12th street was destroyed by fire.

The Brown-Rowan-Buck Auto Sales Company, Indianapolis, which has the Studebaker agency in Indianapolis and vicinity, has taken over the parts department conducted by the Studebaker Corporation heretofore.

The Crown Motors Company, Chicago, formerly at 1303 Jackson boulevard, has opened salesrooms at 1712 Michigan avenue.

Walton & McFarland, Philadelphia, Penn., accessory dealer and distributor of the Peerless tire, trading under the firm name of the Century Auto Company, North Broad street, has dissolved partnership. Mr. McFarland, however, will continue business under the same firm name.

The Lynn Car Company, Lynn, Mass., handles the Buick and Metz cars for that territory. Herbert Kay is interested. The company has a service station at Silver Lake place.

The City Garage & Sales Company, Inc., and the Albert N. Phillips Electrical & Machine Works, Pittsfield, Mass., have been consolidated and will hereafter be under one roof at 501 North street. A. C. Johnson will have charge of the automobile department of the combined concerns. The garage has a capacity of 150 cars.

T. Whittle, Waterloo, Ia., has taken over the stock and business of the Black Hawk Company, at 417 Fifth street.

The Meely Rubber Company, Philadelphia, has sold its Washington, D. C., branch to the Firestone Tire & Rubber Company, Akron, O. It will be continued as a Firestone branch under the management of J. J. Haas.

The Oklahoma Motor Company, Oklahoma City, Okla., has sold its assets to Thompson & Bruington, which has moved to 126 West Grand avenue.

Frank S. Pattridge and Neil C. Cornell have entered into partnership to handle the Firestone-Columbus cars and trucks in Oneonta, N. Y.

The Great West Motor Car Company, Winnipeg, Man., will handle the Imperial and K-R-I-T cars in the provinces of Manitoba, Saskatchewan, Alberta and British Columbia. Arrangements are being made for a garage and showrooms and the manager is said to be a man well known in automobile circles in Winnepeg and Western Canada.

The Mandigo Auto Repair Company, Pittsfield, Mass., has rented the Ford repair shop in the rear, but still retains the vulcanizing, tire and accessory departments.

Denton & Anderson, Cleveland, announces that it is the successor to Denton & Flagg of Cleveland, Chicago and Detroit, in the same offices.

The Castle-Monson Company, Detroit, will be known

Digitized by Google

to the trade hereafter as the F. E. Castle Company, 870 Woodward avenue. This comes as a result of F. E. Castle having purchased Mr. Monson's interests in the business. The company represents a number of large automobile accessory factories.

The Morgan & Torrenga Auto Company, Lafayette, Ind., will hereafter be known as Morgan, Torrenga & Snoddy.

E. A. Christiansen & Co., Sioux City, Ia., has purchased the entire stock and good will of the business heretofore conducted as the Inter-State Auto Supply Company. The concern acts as distributor for Maxwell, Oakland and McFarlan cars.

W. J. McCarthy, Bridgeport, Conn., has taken the agency for McGraw tires, manufactured by the McGraw Tire & Rubber Company, East Palestine, O.

A. B. Lanes, Camden, N. J., has taken over the management of the Palace garage on Haddon avenue. A full line of accessories and supplies will be carried.

The Kemco Electric Sales Company, Milwaukee, Wis., has opened offices at 454 Jackson street, where it will distribute Kemco fan type generators in that state.

The Excelsior Sales Company, Virginia, Minn., is the name of a new firm that will locate there.

The John V. Wilson Company, Boston, Mass., has secured the agency for the A. V. shock absorber. The address of the company is 320 Pleasant street.

Louis and Edward Roesch, Seattle, Wash., have opened salesrooms at 1112 East Madison street. They handle the Velie car.

H. Ross Maddocks, Boston, has secured salesrooms at 175 Pleasant street, where he will exhibit Stewart trucks and the new Twombly car to much better advantage than in his old quarters.

T. A. Riggs, Portland, Ore., who recently took the agency for King cars, has opened salesrooms at 72,078 Grand avenue, where all models will be on display.

The B. F. Wade Tire & Rubber Company, Los Angeles, Cal., has acquired the sales rights for the "Tyrian" tire

Owens Automobile Company at Sixth and Court streets.

Alexander C. Sutherland, Goshen, N. Y., formerly deputy county clerk, has entered the automobile business in that city.

A. H. McGraw, Syracuse, N. Y., who has handled bicycles and motorcycles for over 22 years in that city, has taken on automobiles. He has secured the Metz agency and will continue at his former location on West Jefferson street.

A. Hanton Chace, Los Angeles, Cal., has taken the agency for the Acme Torsion springs at 1044 South Olive street.

William Faats, Oswego, N. Y., owner of the Binghamton garage, has leased a building on North avenue and will open a salesroom for automobiles.

Haley & Sheraton, Everett, Wash., distributor for the Ford cars, will purchase the business of the Ferrell Auto Company. The concern will also handle the Buick and Cadillac cars.

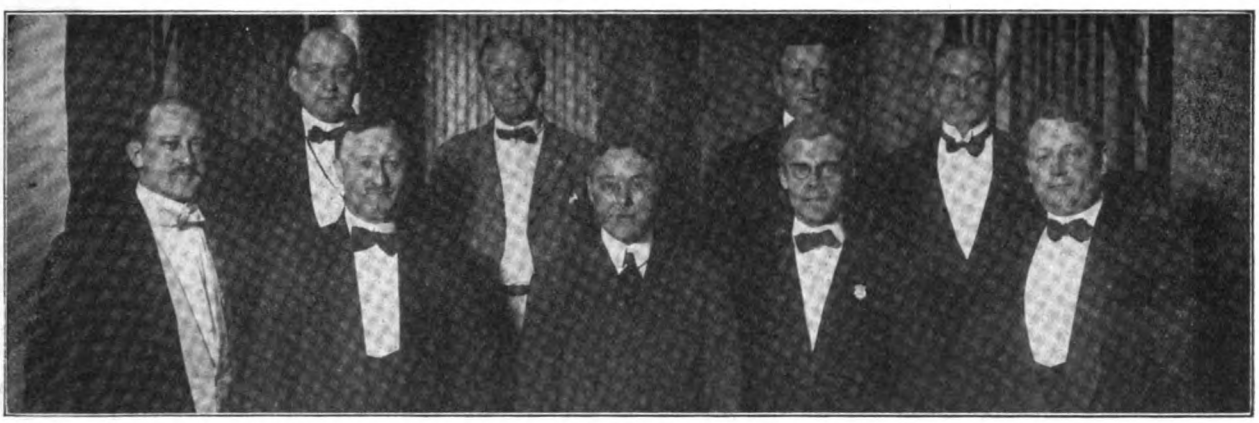
The Hartford Automobile Exchange, Hartford, Conn., will deal in second hand cars. The company is located in the Hartford National Bank building.

The M. & M. Sales Company, Reading, Penn., has taken the agency for the Prowodnik tires.

Bradley J. Saunders, Birmingham, Ala., formerly interested in the East Lake Land Company, has entered the automobile business, having taken over the agency for the Hudson cars. A company has been formed by him to be known as the Saunders Motor Car Company, and will be located at 422 South 20th street.

The Oregon Garage & Supply Company, Greenwood, S. D., has opened for business in the old quarters of the Greenwood garage on Maxwell avenue. O. M. Dantzler is president of the company and A. H. Jennings is manager. The company has the agency for Buick and Chevrolet cars.

The Western Motor Supply Company, Milwaukee, Wis., is the name of a new automobile firm located at 408 Jefferson street. The company will handle all lines of au-



Officials of the Buffalo Automobile Dealers' Association, Buffalo, N. Y., Including George H. Dreybus, Manager; Charles F. Monroe, Treasurer; John J. Gibson, Secretary; Howard B. Smith, Director; Arthur W. Halle, Director; Ralph E. Brown, President; Edward C. Bull, Director; Gustave C. Miller, Vice President.

in that territory. The company is located at 512 West Eighth street.

The East Nashville Auto Company, Nashville, Tenn., has been sold to J. L. Gaston and Thomas H. Christian. The new firm will begin business with a complete stock of automobile supplies.

The Belvidere Cycle & Supply Company, Belvidere, Ill., has opened a salesroom at 205 South State street. In addition to handling motorcycles the company will deal in automobile accessories.

Benjamin Smith and Ernest Woodman, Fairfield, Me., are about to enter the trade. They have leased a site and are erecting a building for their business.

Robert C. Crowthers, Cincinnati, has re-entered the trade, this time as a distributor of Lexington and Howard cars. He is located at 1815 Reading road.

Bowen & Crain is the name of a new concern at Redlands, Cal.

The Wichita Automobile Company, and the Wichita Garage Company, Wichita, Kan., have consolidated their business and will continue as a single company in the garage and salesroom at 231-37 North Lawrence avenue. The company will continue to handle the Pierce-Arrow, Chalmers and Reo, and the Waverley electric lines.

The Jawer's Auto Supply Company, Philadelphia, has opened an agency for tires, accessories and supplies.

The Brunn Carriage Manufacturing Company, Buffalo, N. Y., distributor for the Peerless and Hupmobile cars, has also taken the agency for the A. V. shock absorber.

L. C. Lessenich, Sioux City, Ia., owner of the Pioneer Automobile Company, has sold his stock to S. C. Brown.

George J. Bohen, Sacramento, Cal., representing Cuyler Lee of San Francisco, has opened headquarters at 3308 K street.

The Tyler Automobile Company, Pueblo, Col., agent for the Overland cars, has opened headquarters with the

tomobile, motorcycle and cyclecar supplies, and act as a jobber of automobile equipment as well.

The Bacon Wain Motor Sales Company, Toledo, O., has established salesrooms in a building at 1017 Jefferson avenue. The company is agent for the King, Empire and Pullman cars. It will also retain a repair shop at 840 Dorr street.

The Fisher Automobile Company, Indianapolis, Ind., has taken the agency for Hess-Bright ball bearings and will also handle all of the renewal business.

The DeLancy-Cope Tire & Rubber Company, Kansas City, Mo., is the name of a new tire firm located there, and quarters have been obtained at 407 East 15th street. The firm will be the local distributor for the Motz, Portage and Polack tires.

Newell & Eccles, St. Louis, Mo., has opened offices and salesrooms at 3104 Locust street, where it will do business as agent of the Empire gasoline economizer.

M. E. Le Bon and H. Mowbray, Brookline, Mass., have purchased the Corey road garage in that city and will conduct it in a high class manner, giving their patrons the very best of service.

The Jeffery Auto Sales Company, San Francisco, Cal., announces that its new display rooms at the service building, 56-72 12th street, are now in first class condition. The entire line of cars is shown here, and to much better advantage.

James Bennett, Rippey, Ia., has bought the business of the Graham Auto Company.

George H. Wike and Edward Keller, Barry, Ill., have entered the trade there. They will handle Maxwell cars.

S. W. Wexler, general manager of the United Auto Supply Company, New Orleans, La., will open an accessory store in Tucson, Ariz.

Allen & Hardy, Monticello, Ark., has opened an automobile supply store.

Rotary Valve, Otto Ernst, Larchmont, N. Y.; No. 1,083,812. Filed April 9, 1912.

Number Displaying Device, William Falke, Ithaca, Neb.; No. 1,083,813. Filed Oct. 9, 1912.

Fender, Domizio Ghezzi, New York City, assignor of one-half to Angelo Zerbarini, same city; No. 1,083,824. Filed June 10, 1913.

Non-Skid Tire Shoe, Herman Strongson, New York City; No. 1,083,869. Filed Feb. 15, 1913.

Tread Attachment, John W. Marston, Jr., Mobile, Ala.; No. 1,083,886. Filed July 2, 1912.

Starting Mechanism, Edmond Fillettaz, Lyons, France; No. 1,083,929. Filed Aug. 2, 1912.

Electric Spark Producing Apparatus, George W. Wacker, New York City, assignor to J. S. Bretz Company, same city; No. 1,083,964. Filed Aug. 10, 1908.

Pneumatic Suspension, John Williamson, New York City, assignor of one-half to Warren Y. Huff, Brooklyn, N. Y.; No. 1,083,969. Filed March 26, 1912.

Resilient Wheel, Alfred R. Wylie and James G. Wright, Big Spring, Tex.; No. 1,083,970. Filed Nov. 11, 1912.

Taximeter, Walter Lewin, Aberdeen, Wash.; No. 1,084,018. Filed July 31, 1911.

Tire, James McNamee, Amsterdam, N. Y.; No. 1,084,025. Filed Sept. 30, 1909.

Fender, Richard E. Morrow, Broken Arrow, Okla.; No. 1,084,026. Filed Nov. 12, 1912.

Carburetor, Frank S. Pierce, Minneapolis, Kan.; No. 1,084,028. Filed April 22, 1912.

Horn, Victor E. Tollefson, Elk Point, S. D.; assignor by mesne assignments to International Automobile Supply Company; No. 1,084,675. Filed June 5, 1912.

Resilient Tire, Daniel H. Deery, Bridgeport, Conn.; No. 1,084,731. Filed Feb. 6, 1913.

Motor, Richard H. Morrow and James Morrow, Waukegan, Ill.; No. 1,084,749. Filed March 17, 1910.

Electric Ignition Plug, Leon Auguste Mazellier, St. Pierre le Moutier, France; No. 1,084,808. Filed Feb. 9, 1911.

Igniting Device, John Glen Newman, Milson's Point, near Sydney, New South Wales; No. 1,084,815. Filed Dec. 16, 1912.

Cushioned Suspension, William L. L. Pelitz, Selkirk, N. Y.; No. 1,084,819. Filed June 29, 1912, continued from May 22, 1911.

Tractor and Trailer Combination, Theodore Pescatore, Liege, Belgium; No. 1,084,820. Filed July 6, 1911.

Spark Plug, Charles W. Beck, Rockville Center, N. Y.; assignor by mesne assignments to Michigan Motor Specialties Company, Detroit; No. 1,084,838. Filed March 17, 1910.

Steering Gear, William A. Campbell, Maricopa, Cal.; No. 1,084,844. Filed Oct. 21, 1911.

Tire, Cristina Mabel Liged, London, England; No. 1,084,864. Filed Dec. 26, 1912.

Spring Wheel, Gloster J. Garrett and Herbert C. Garrett, Richmond, Ind.; No. 1,084,882. Filed April 12, 1913.

Muffler, Edward Holzwarth, Miller, S. D.; No. 1,084,883. Filed May 20, 1913.

Pneumatic Tire Casing Repair Device, Joseph N. Newsom, St. Louis, Mo.; assignor of one-fourth to Frank Niemann of St. Louis and one-fourth to Louis W. Hottel, Chicago; No. 1,084,895. Filed Jan. 29, 1912.

Shock Absorber, Carl P. C. Bretschneider, Philadelphia, Penn.; No. 1,084,925. Filed Aug. 20, 1913.

Carburetor, Elmer Nice, Philadelphia, Penn.; No. 1,084,954. Filed Nov. 26, 1912.

Anti-Slipping Device, Howard J. Otis, Walton, Ore.; No. 1,084,957. Filed Aug. 20, 1913.

Transmission Gearing, John S. Peters, Scottdale, Penn.; assignor of one-half to Charles H. Loucks, same place; No. 1,084,959. Filed May 10, 1913.

Motor, John E. Stevens, Kewanee, Ill.; No. 1,084,977. Filed June 20, 1912.

Automobile Sleigh, William John Wright and Robert Hichens Hockin, Oak Lane, Manitoba, Can.; No. 1,084,997. Filed Feb. 5, 1913.

Carburetor, Herbert Austin, Bromegrove, England; No. 1,085,003. Filed July 25, 1913.

Tire, Reuben Davis S. Bennett, Springfield, Mo.; No. 1,085,010. Filed Sept. 19, 1912.

Spark Plug, Adolfo de Clairmont, Toledo, O.; assignor to the Toledo Automobile Devices Company, same city; No. 1,085,024. Filed Aug. 21, 1911.

Digitized by Google

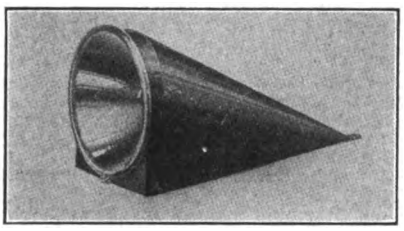
ACCESSORIES, SUPPLIES AND FITTINGS.

(When Writing to Advertisers, Please Mention The Accessory and Garage Journal.)

J-M LOBSTER EYE.

Adjustable Electric Headlight for Fender.

The H. W. Johns-Manville Company, New York City, is marketing the J-M lobster eyes, which are made



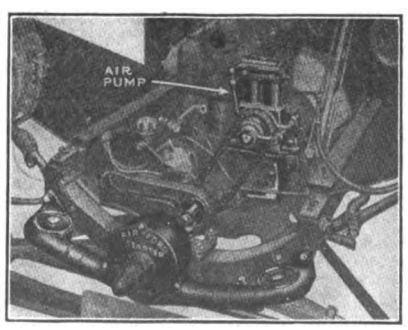
in two styles, these differing in the size of lamps employed. The lobster eyes consist of a lamp fitted with a stamping so that they can be attached to the top of each front fender in line with the radiator. The style C fits loosely in the stamping and can be turned in any position over an arc of 30 degrees so as to throw the light directly in front of the car or at a distance as desired. When the proper adjustment is obtained, the lamp is permanently set by means of a small screw. A six-inch reflector is utilized, and the wires are led through suitable tubing to the lobster eye. All leads are concealed.

KELLOGG FORD STARTER.

Spins Crankshaft by Use of Compressed Air.

The Kellogg Manufacturing Company, Rochester, N. Y., maker of power tire pumps, etc., has brought out a compressed air starting system for the model T Ford car. It comprises in combination a pump and starting mechanism, storage tank, gauge, starter button and pump control. As shown by an accompanying illustration, the installation involves the addition of a small bracket at the front of the car, which does not detract from its appearance.

The unit comprises a cylinder, the piston of which is actuated by air entering from the tank and at high speeds. A chain connected with the piston operates a drum in the housing mounted at the front of the car. This chain makes one complete turn around the drum. The fan belt pulley is replaced with a combination pulley, sprocket for driving the pump, and a clutch which automatically engages with the motor when the starter is operated. The application of the air is gradual, but the power developed during the balance of the piston travel is such as to spin the motor. A spring returns the drum, preparing for a second application of energy. It is automatically performed.



All working parts are fully enclosed, and provision is made for inflating tires. Control of the pump for storing compressed air is by a button, and a similar member operates the starter. Several starts are held to be possible with one charging of the tank.

AUTO SIGNALITE.

Rear Signalling Device Operated by a Lever.

The Auto Signalite, made by the Auto Signalite Company, 735 Seventh avenue, New York City, differs from the conventional types of signalling devices in that a small lever is utilized to operate it. The lever is operated by the driver slightly in anticipation of stopping, turning to the right or left, or continuing in the original direction.

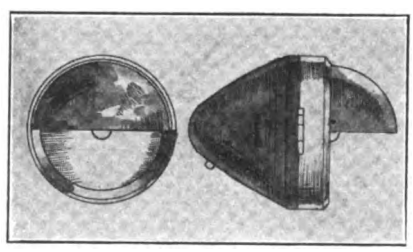
Combined with the signal is a tail light and number plate bracket, these being compactly arranged in a cylin-

der having dimensions of 5.5 by 12.5 inches. The company states that the installation can be made easily and that the Auto Signalite can be attached to any part of the rear of the vehicle. An electric light illuminates the words, "Stop", "Right", "Left" and the red light.

BROWN HEADLIGHT.

Mechanically Controls and Deflects Rays of Light.

The Brown Company, Syracuse, maker of power tire pumps, has brought out the Brown deflecting

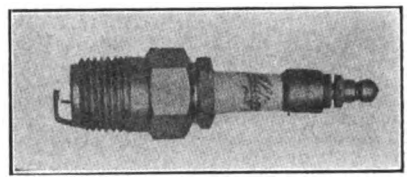


headlight, which, as the name implies, is a device for controlling the light rays and without the usual dimming arrangement. The control is mechanical, the movement of the shutter being obtained by the use of an individual, compact motor. The operating switch may be located as desired. A semi-dome metal deflector or shutter, the drop of which may be regulated, acts on the horizontal and upward rays to the extent of changing their course, forcing a large number of them downward and ahead. This eliminates the glaring effect without sacrificing efficiency and conforms to the ordinances prohibiting the use of blinding headlights.

ALDING SPARK PLUG.

Is High Grade, Moderately Priced and Guaranteed.

The Alsten & Goulding Company, 36 Foster street, Worcester, Mass., is producing a high grade spark plug,



called the Alding, which is marketed at a low price and carries a liberal guarantee. While designed for service with all types of internal combustion engines, it is especially serviceable for the model T Ford motor.

The company states that any motorist purchasing an Alding plug, and not finding it satisfactory, can return same for replacement. The mileage is unlimited. The porcelains utilized in the Alding are made from a secret formula from the best imported clays, and are hand turned. They are constructed to be as nearly heat proof as possible, and any that crack with heat will be replaced free of charge. All parts are interchangeable, and the porcelains are inexpensive. The Alding is made in various threads, and retails for 75 cents.

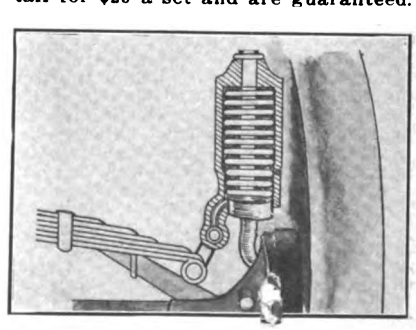
K-W ROAD SMOOTHERS.

Designed Especially for Model T Ford Automobiles.

The K-W Ignition Company, Cleveland, O., is manufacturing the K-W road smoothers for the model T Ford automobile and the company states that they are not shock absorbers. It is held that the tires may be pumped up to the maximum pressure without affecting the resiliency, as the K-W has a cushion effect, taking up vibration, shocks, etc.

The smoothers come four to a set, being utilized both front and rear, and, as will be noted by an accompanying illustration, comprise a simple arrangement of a spring hanger with an additional coil spring which is substituted for the regular Ford spring hangers. The K-W springs support the regular members and it is held that they are anti-synchronous with them, but do not retard their action.

It is stated that the smoothers may be attached without drilling or any other alterations. All that is necessary is to relieve the springs of the weight of the car, displace the spring hangers, place the smoother in position and shackle the end of the main spring to the K-W device. They retail for $25 a set and are guaranteed.

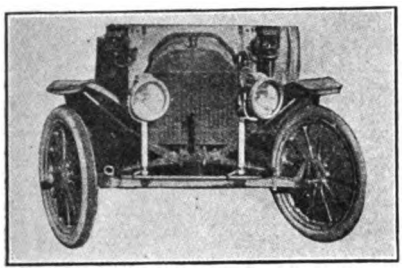


Digitized by Google

SAFETY FIRST HEADLIGHTS.

Automatically Turn with Front Wheels, Eliminating Glare.

The Headlight Support Company, Detroit, is manufacturing the Safety First turning headlights for which a



number of practical advantages are claimed. They are of the moving type, being actuated by connections to the tierod of the machine so that when the steering wheel is rotated the headlights are turned in the same direction as the front wheels. The supports are fastened to the frame in much the same manner as the conventional method of attachment.

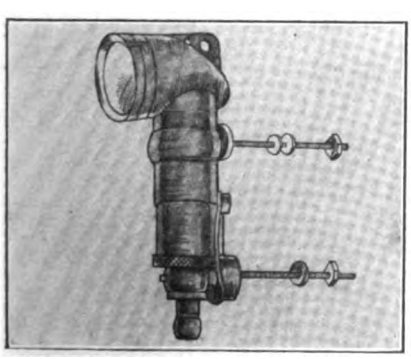
The particular advantage emphasized by the Safety First device is that in rounding curves and turning corners the road is lighted on the side not illuminated by fixed headlights. Another feature claimed is that in meeting an approaching car the lights may be so turned as to eliminate the glaring effect.

ROFFY ELECTRIC LAMPS.

Eliminate Glare—Are Attached to Radiator.

The Roffy-Grace Corporation, 1926 Broadway, New York City, is introducing the Roffy lamp, which presents a number of interesting features, among them being the elimination of glaring effects, the inventor stating that the non-blinding quality does not impair the efficiency of the light. The Roffy lamp is not only a neat, compact design, but its light weight permits of installation on the radiator, two .1875-inch bolts being employed. These are inserted between the fins. The company states that the method of locking prevents vibration and that the radiator cannot be damaged by the bolts which retain the lamps in place.

Glare is eliminated in the Roffy design by the use of a conically shaped achromatic light beam with sharply defined edges, so projected that the upper boundary is parallel with the ground. This light is rectified for chromatism, aberration and diffraction, producing an even field of white light. It is stated that the rays will illuminate for about 1.5 city squares, and since the upper edge of the light beam is never more than 4.5 feet from the ground, there is no glare into the eyes of persons on the highway or in approaching vehicles.

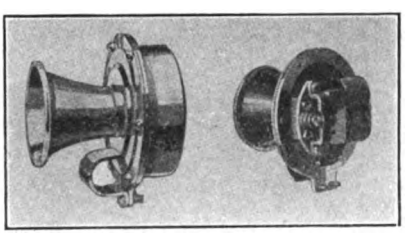


The lamp itself is tubular. Located at the bottom of the tube is a mushroom shaped tungsten bulb, above the flattened portion of which is a plano convex condensing lens that collects the rays. Above this lens is a double convex lens, which converges the light beam upwards against a mirror placed at such an angle that the light beam is reflected horizontally through the projection lens.

MAXI II HORN.

Compact and Designed Especially for Use with Motorcycles.

The Dean Electric Company, Elyria, O., which concern markets a number of electric horns, is producing a new type termed the Maxi II, which is designed especially for motorcycles. It is a popular priced signal; provides a sharp, abrupt, penetrating sound, and it is stated it requires but

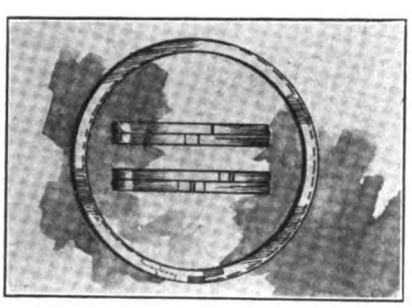


little current to operate. A special lever type push button is included in the equipment, it being mounted on the handlebar close to the grip. It is of the quick acting type and easily operated. The finish of the Maxi II is baked enamel and the switch is nickelled. Suitable length of flexible cord and clips accompany each horn. The company is marketing a battery case which holds two No. 1 flashlight cells, capable of operating the horn for a considerable period. The connections of the case permit of the use of one or both cells as desired.

DUPLEX PISTON RING.

Maker Claims Oil and Gas Tight Features.

The Duplex piston ring is manufactured by M. L. Dunham, 140 West



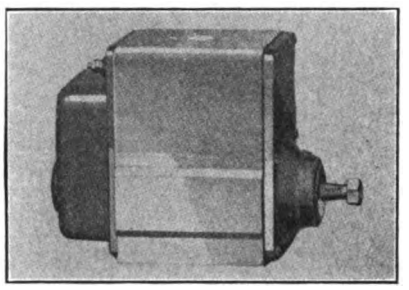
52nd street, New York City, and the maker states that when fitted to a piston the gas cannot pass the rings; that smoking is eliminated and that the efficiency of the motor is improved. One of the qualities claimed for the Duplex is that wear does not affect the joints. It is also stated that it remains sealed at all times.

It is further held that the tension of the ring is balanced or even, and that its gas tight feature is obtained with a very light pressure. When in service the ring has an outward tension, also a double spiral tension; that is, the free ends not only exert a force outwardly, but expand radially in opposite directions around the cylinder wall, and will fit themselves to a worn or new cylinder.

ELYRIA-DEAN DYNAMO.

Lighting System Adapted to the Small Motor Car.

The Dean Electric Company, Elyria, O., is manufacturing a dynamo lighting system especially adapted to



the small car, which is termed the Elyria-Dean II. The company states that each element is made to do the work most efficiently, cutting down the weight to a minimum, and obviating complications in mounting and wiring. The system was brought out to meet the demand of owners who desire other than a standard equipment and of large output capacity.

The dynamo is very compact and has a self-contained reverse current cut-out, and the equipment includes a combined lighting switch, current indicator and connecting rack, and a 40 ampere-hour capacity storage battery. The dynamo is cut in at 700 revolutions a minute of the armature, and carries all lights dim at 1000 revolutions, and bright at 1400. The drive ratio of the Elyria-Dean is 2:1.

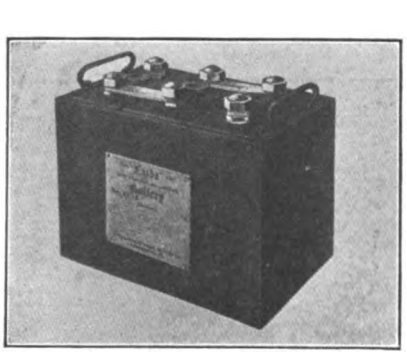
The output is controlled by a special arrangement of the windings and by a particular design of the magnetic field, a construction which the company states eliminates moving and adjustable parts. The action of the dynamo, as well as the reverse current cut-out, is shown at all times by a special indicator located in the dash switch.

EXIDE TYPE X BATTERY.

New Design for Service with Motor Starters.

The Electric Storage Battery Company, Philadelphia, is producing a new type of battery for service with electric motor starters, termed the Exide type X. It is designed to meet the exacting requirements of starting motors and lighting systems, is very compact and is constructed with the same care characteristic of the product of this concern.

Individual cells are utilized, and these are closed at the top by means of a cover having an inner sealing flange and an outer flange which encloses, supports and protects the top edge of the bar. The maker states that the covers will not catch and retain dirt or water, and that it can be cleaned easily. An important feature is the gas vent and filling aperture, which is so arranged as to limit the amount of water that can be used.

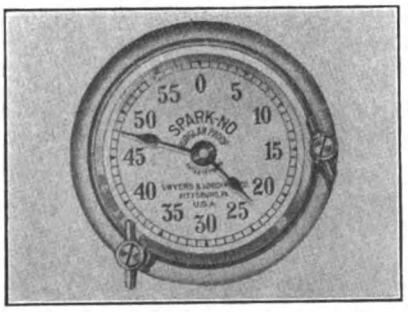


Digitized by Google

SPARK-NO LOCK.

An Ingenious Device for Locking the Ignition.

The Spark-No automobile lock is marketed by the H. W. Johns-Manville Company, New York City, and is



an ingenious device for locking the ignition of the motor car and preventing use of the machine by others than those intended. It is attached to the dash, and the hands are moved over a calibrated dial by means of two little knobs. These are used for starting for battery and running for magneto, and one of the qualities is that it is impossible for any one riding with the driver to discover the starting combination.

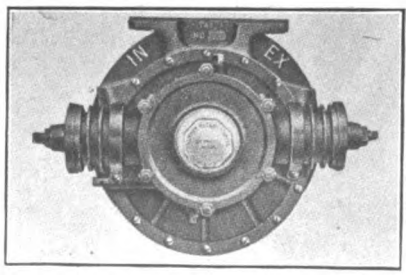
If anyone attempts to steal the car, not only is the ignition cut out, but an alarm is sounded by a bell. The signal is also sounded if one tampers with the lock. The action of the device is similar to a combination lock, but differs in that the combination operates a switch, and this switch cannot be closed unless the hands are properly set on the dial.

THURBER AIR STARTER.

Air Pump and Starter Combined in a Unit Construction.

The Thurber Rotary Starter Company, 685 Atwater street, Detroit, has brought out a new model Thurber rotary starter, which is operated by compressed air. The pump employed is of the high pressure type and one of its features is that it is built with the starter, a unit construction. The starter is mounted at the front of the machine, on a cross frame member, and being very compact, does not detract from the appearance of the car. The pump is held to be very efficient in its action and makes it possible to carry a pressure of 250 pounds at all times. The air is stored in a drawn steel tank located out of sight beneath the body. The system includes a gauge mounted on the dash, which indicates the supply of air in the tank, and provision is also made in the dash plate valve for an outlet for connecting a hose for the purpose of inflating tires, cleaning, etc.

Two control units are mounted in the floor or toeboard, these comprising the starting button and pump control pedal. The gasoline motor is started by depressing the button, which actuates a rod connected to a double control valve, permitting air to flow from the tank to the starter which, being attached to the crankshaft, spins the last named member.

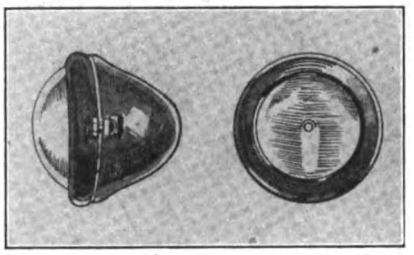


Upon the engine starting under its own power a clutch disengages the starter, which remains idle until another start is desired. The tank is refilled by depressing the pump control pedal.

NON-BLINDING HEADLIGHT.

New Gray & Davis Light Has Novel Features.

Gray & Davis, Inc., Boston, has brought out a non-blinding type of headlight which is held to provide a bright beam for distance and a diffused light for the foreground. The latter quality is obtained by the use of a semi-circular, frosted front glass, which is held to be stronger than the usual construction and to diffuse a "fan ray", making the radiator and front wheels plainly visible to an approaching vehicle. With the bulbs lighted and lamps viewed from the front, they have an appearance of a frosted globe glowing with

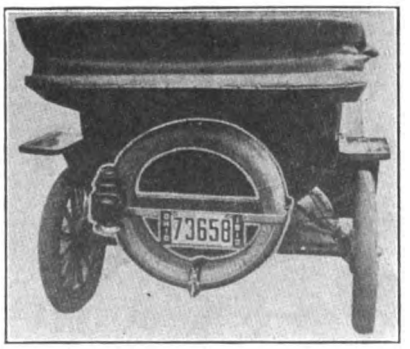


light and showing a relatively small bright spot. The last named provides a long, slender "pencil ray", which is thrown directly on the road far ahead.

SLY FORD TIRE HOLDER.

A Combined Lamp, Number Plate and Shoe Support.

Smalley Daniels, Detroit, with offices at New York City and Boston, is marketing the Sly lamp, number plate and tire holder, which is designed for the model T Ford automobile. The maker states that it includes several valuable features not embodied in other designs, in that it combines a number plate holder and



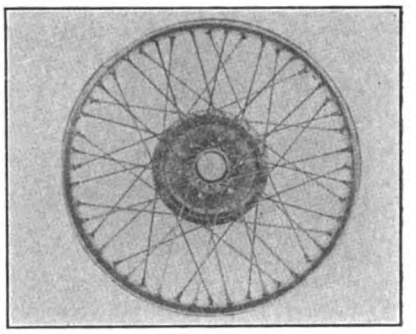
lamp bracket, compact tire holder and a thief proof lock.

The tire holder is attached to the rear of the chassis, is of pressed steel black enamelled, and is so formed as to provide a snug cradle for each tire. It is stated that the design is such as to prevent chafing of the tires. Straps are also eliminated. One of the qualities of the holder is that either tire may be removed in 10 seconds without disturbing the other casing. The lock is a part of the construction. It is stated that the design can be attached in a few minutes and that it improves the appearance of the machine, in that it helps cover the open space below the body.

FORD WIRE WHEEL.

Stanweld Design Bolts to Wheel Flange.

The Standard Welding Company, Cleveland, O., is manufacturing a neat design of wire wheels for attachment



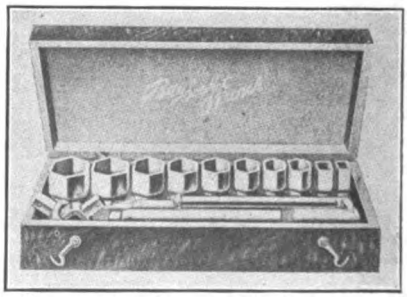
to model T Ford cars, and one of the qualities of the design is that it may be applied to both front and rear wheels by utilizing the old wooden wheel flange and bolts. The hub of the Stanweld is a steel stamping, the spokes are reinforced at both ends, and the three-cross method of lacing is employed. The finish is two coats of black enamel, baked on. Among the features emphasized in the wheels is lightness. They come complete for attachment, and their application does not involve any other work than removing the old flange and bolts, and displacing the wooden wheel. Special tools are not required.

RAY SOCKET WRENCH.

Equipment Includes 30 Steel Sockets, Extension, Etc.

The Ray socket wrench is manufactured by the Packer Auto Specialty Company, Chicago, for which Ralph Waldt, 1790 Broadway, New York City, is distributor. The maker states that the wrench will fit every nut and bolt on a car, and may be utilized in places difficult of access with the conventional tool. The wrench proper is sturdily constructed and when utilized with the universal joint provided with each outfit, it is claimed that work may be accomplished at any angle up to 90 degrees.

The complete equipment includes, in addition to the wrench, which is nickelled and highly polished, a long extension bar, two short extension bars, one large and one small screw driver bit, one universal joint, one four-inch spark plug socket and 30 case hardened cold drawn steel sockets. These are graduated in sizes and fully guaranteed. This equipment comes in a wooden case, and the maker states that it will perform a variety of work as well as eliminate the necessity of carrying a large number of conventional tools. The company also manufactures a small set which differs from the larger member in that 11 sockets are provided in addition to the spark plug member. The smaller outfit comes either in a leather case or an oak box. The larger set retails for $10.

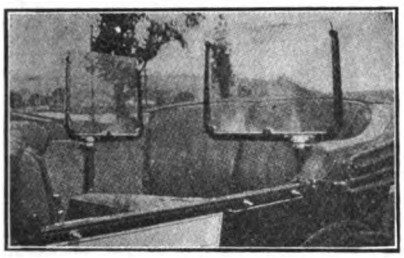


Digitized by Google

CLARK WINDSHIELD.

Is Fitted to Tonneau and Is Adjustable as Desired.

The Clark adjustable tonneau windshield is manufactured by A. N. Clark & Son, Plainville, Conn., and, as the



name implies, is designed to protect the occupants of the rear seats from draughts, rain, etc. One of its qualities is that it may be adjusted as desired, and another feature is that it may be folded when its service is not required, as in warm weather. It is made with a variety of bases to fit any car, and is attached to the seat under the cushion, coming up between the seat arm and the cushion. One windshield is used on either side of the car.

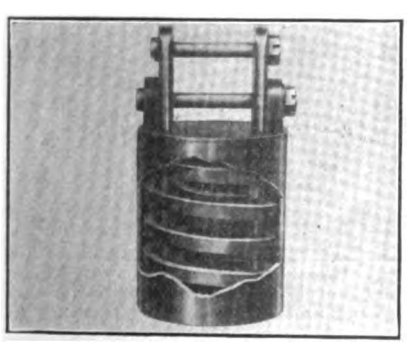
The Clark design is made of aluminum, finished in black, and is not only light, but is substantially constructed. It is pointed out that its use does not interfere with the exit or entrance of passengers, and that communication with the occupants of the front seats is not interfered with.

HARTFORD CUSHION SPRING.

Principle Involves Use of Double Spring.

The Hartford cushion spring is manufactured by the Hartford Suspension Company, Jersey City, and the maker states that it is not a shock absorber, but a spring construction, which makes easy riding over moderately rough or other roads where the usual spring would cause discomfort. The Hartford design comprises a pair of double-acting spiral springs which are attached to the rear shackles, capable of absorbing vibrations not taken care of by the usual shock absorbers.

The Hartford design consists of a spring within a spring, the larger or quick acting member moving freely up and down as the automobile spring expands and contracts. The inner spring serves as an auxiliary member to the other and is slower in its action. The two operate as compression members until a certain point is reached on the return, when it is held that a perfectly easy movement, free from abruptness, is obtained. The components of the cushion spring are housed in a neat metal casing and being compact the design does not detract from the appearance of the car. They are made in five models, including a special design for model T Ford machines, the types varying only in their carrying capacity. They



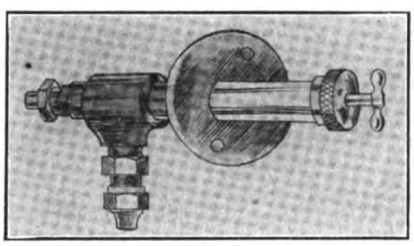
are sold under a guarantee, and it is stated that they can be attached in 30 minutes. The maker states that only the finest grade of steel is incorporated in Hartford cushion springs.

ZERO PUMP PRIMER.

Mixes Air and Gas for Starting a Motor When Cold.

The Zero pump primer is marketed by the Ideal Brass Works, Tenth street and Canal, Indianapolis, Ind., is attached to the dash, and the maker states that it automatically mixes the proper proportions of fuel and air for starting a cold motor. It is connected to main line of supply and the fuel is drawn into the mixing chamber or body of the pump, by the outward stroke of the plunger.

The downward stroke injects a small spray of fuel and air into the intake manifold above the carburetor, and the maker states that the mixture will ignite easily. The de-

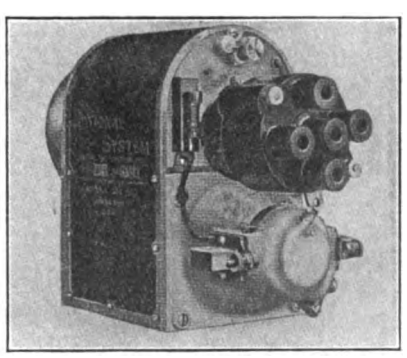


vice is provided with an automatic needle valve for opening and closing the line when the plunger is operated. It retails for $3.

NATIONAL GENERATOR.

Includes Timing Mechanism for Ignition Purposes.

The National Coil Company, Lansing, Mich., is manufacturing what is termed its type A generator, which is constructed to supply a large output at low motor speeds, and to carry the average lamp load at eight to 10 miles an hour. The output of the lighting dynamo is automatically regulated, and the maker states that overcharg-



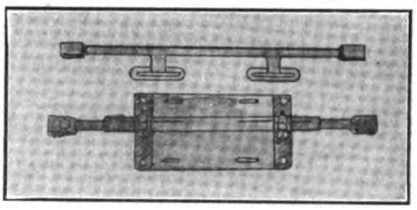
ing of the battery is prevented at high speeds. One of the qualities of the National is the provision made for increasing the output in cold weather and when the machine is used in city service. Augmenting the output is rendered possible by the changing of a screw plug switch on the front plate of the generator.

Ignition is provided by the type A generator unit, a synchronized spark being developed by the use of a closed circuit transformer of compact design. The National dash unit comprises an ammeter, reverse current relay, fuse panel, ignition and lighting switches. These are compactly and neatly grouped. The usual dimming feature is included. The company states that its reverse current relay regulates very closely.

LEE LICENSE HOLDER.

Includes Truss Rod to Prevent Vibration.

The Wm. O. Lee Company, Port Huron, Mich., is marketing the Lee lamp truss rod and license holder. It



is made in two styles, the No. 1 being designed for used cars and the second a special for automobile manufacturers. The former is adjustable, rods sliding into either side of the holder proper, and being locked by a clamp having a locking bolt. This permits the use of the design on different machines.

The device is fitted by slipping the ends of the rods over the lamp bracket, suitable eyes being provided. The clamping members are then secured. The maker states that the parts will not work loose, and that the truss will prevent vibration of the lamps, as the brackets are held in a rigid position. Means are also included for securing the number plate. The lamp truss rod and number plate holder is constructed of high grade material and is nicely finished. The No. 1 retails for $1.75 and the No. 2 for $2.

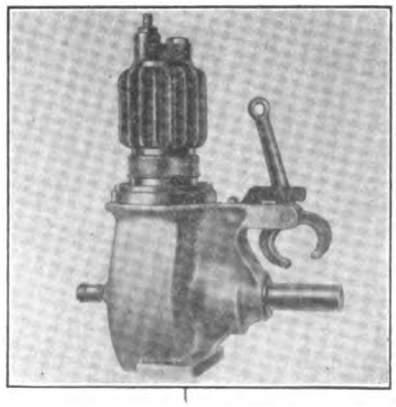
STEWART AIR PUMP.

The One-Cylinder Design Having a Clutch, Etc.

The Stewart-Warner Speedometer Corporation, Chicago, has brought out a new type of one-cylinder pump to meet the demand for a high grade, popular priced unit. It is an air-cooled design and the fins provide ample cooling surface. The air is protected by a double ball valve, insuring operation even if one becomes clogged with dirt, etc. The bore is 1.4375 inches, stroke 2.5. The piston is extra long and is provided with oil conductors, insuring lubrication.

The pump requires no surplus oil in the crankcase, the piston being lubricated by means of a wick system, or wipe, in contact with the piston. Oil is dropped from this wick from the outside of the pump. The bottom of the crankcase is open, so that any free oil drops out. The maker states that it is impossible for any lubricant to be carried with the air into the tires. A clutch, tire gauge and 13 feet of hose with connections are supplied with each pump.

The Stewart Warner Speedometer Corporation also manufactures a four-cylinder pump for air motor starters and for inflating tires. It retails for $25, the smaller at $15.



Digitized by Google

MACHINERY, TOOLS, EQUIPMENT AND SUPPLIES.

THE Cox Brass Manufacturing Company, Albany, N. Y., has brought out the Cox combination welding and decarbonizer outfit, which, as the name implies, provides an equipment for removing carbon by the oxygen process and for welding broken parts. It has several advantages, the most prominent of which is, perhaps, the saving of time. Ordinarily the work is sent outside, which generally results in delays, and, in addition, the profit accruing to the garage man is very small, this usually being a percentage. And it sometimes happens that a small repair is desired in a hurry by the customer and that the welding company is not able to handle the work.

Cox Welding Equipment in Service.

With the Cox outfit the welding work may be performed quickly by the repairman, and the company states that the operation of the equipment can be learned in a very short time by the average mechanic. One of the qualities emphasized by the apparatus is that it will do the work thoroughly, welding broken parts made of brass, steel, iron, bronze, copper and aluminum. With the equipment it is obvious that many repairs formerly requiring considerable time with old methods can be made quickly.

The process of welding is well known. The principle of the method is the use of a small concentrated flame of a temperature approximating 3600 degrees Fahrenheit, applied directly to the metals to be welded.

The Cox dual equipment comprises a highly polished oak case, nickel trimmed, with cover and handle as shown in the accompanying illustration. The case contains a welding torch with six interchangeable tips, sufficient to perform welding on all kinds of work; one oxygen reducing and regulating valve, with gauge and shut-off; one acetylene reducing valve, with gauge and shut-off, fitted with special coupling for attaching to Prest-O-Lite gas tank; 12 feet of acetylene hose, 12 feet of oxygen hose and a complete assortment of welding rods for welding copper, brass, iron, bronze, steel and aluminum. The wrenches, goggles, etc., are packed in a special, convenient case.

In addition there is included a decarbonizing torch and swab for removing carbon from motor cylinders by the oxygen process. The last named provides the dual equipment to which reference is made above.

The Cox Brass Manufacturing Company calls especial attention to the low cost of the apparatus, which is marketed as a unit or separately. A special gauge for showing the supply of oxygen on hand is listed at a slight extra cost. The company supplies complete instructions for the use of both systems, and maintains a free service department for the benefit of its customers. One of the features of the department is the expert information supplied for repairs out of the ordinary.

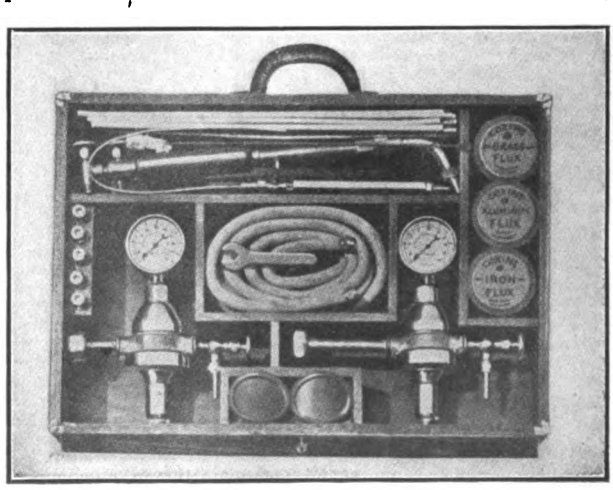
The company calls especial attention to the regulator or reducing valves, stating that they are so constructed as to automatically reduce the pressure of the oxygen from that of the tank of 1800 pounds, and that of the acetylene tank from a pressure of 200 pounds, to a low, workable pressure of from zero to 25 pounds. The pressure is regulated to an even consistency and does not vary from a set amount. Complete details and price lists will be forwarded upon application to the company.

COMMON SENSE BORING TOOL.

W. W. Blakely, 100 Leicester Court, Detroit, is manufacturing the Common Sense boring tool, made in two parts, and designed for service on milling machines, lathes, etc. The shank and barrel are integral, and the dial and holder are combined. The tang of the tool does all of the driving and calibration is by the vernier system reading in thousandths. Throwing the two eccentrics opposite each other centres the bar, and changing the inner eccentrics' position enlarges the cut, giving a total expansion of .5 inch or more. It is made with .625, .75 and .875-inch boring bars. A toolmaker's size is also made. Prices and particulars will be forwarded by the maker on request.

UNIVERSAL HACKSAW MACHINE.

Power hacksaws are time savers in the repair shop and service station, as not only is considerable time wasted in cutting metal by the hand tool, but with large pieces it is not always easy to make an accurate cut. The West Haven Manufacturing Company, West Haven, Conn., produces a line of hacksaw frames and blades,



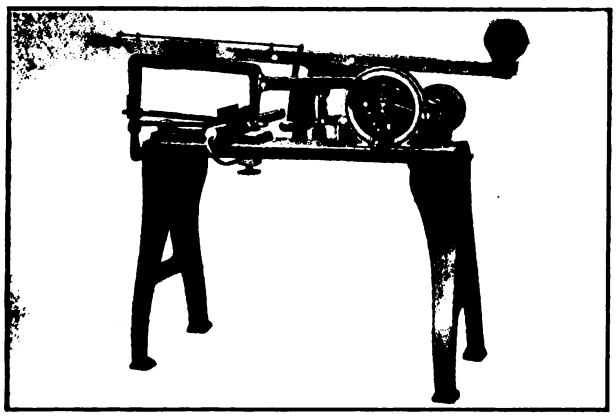
Case Containing Tips, Valves, Etc., Utilized with Cox Combination Welding and Decarbonizing Outfit.

Digitized by Google

and is marketing the Universal hacksaw machine shown in an accompanying illustration. It has a capacity of six-inch solids, and one of the qualities of the equipment is the quick return of the stroke, this being 3:1. The blade also lifts entirely from the work on the return stroke.

The machine is designed especially for economy and speed. There are two fixed strokes, a five and a seven-inch, and only one adjustment is required; that is, for work above five inches in diameter or square. The maker states that the adjustment may be made in the short time of 15 seconds. Another feature of the machine is that the automatic lift is adjustable for wear. It is stated that the automatic stop is absolute, and that the pulley can be lubricated without throwing off the belt. The company calls special attention to the shafts of the machine, stating that these are silent, and being on the bed of the machine make for maximum service. All parts are interchangeable.

The size of the pulley employed is six by 1.75



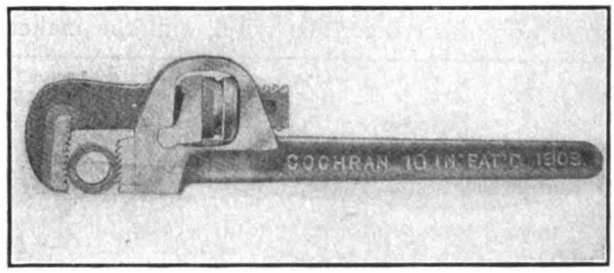
Universal Power Hacksaw Machine Having Rapid Return of Stroke and Being Capable of Cutting Solids up to Six Inches in Diameter.

inches and the speed is 240 revolutions a minute. The length of the saw blades is 12 and 14 inches. The floor space required is 52 by 16 inches; height of work vise, 28 inches, and height over all, 42 inches. The net weight is 240 pounds; gross, 300. All castings are numbered, making for convenience when ordering spare parts. The company issues a catalogue of its products, which will be mailed free on request. The West Haven Manufacturing Company makes a specialty of hacksaws, producing them to meet all requirements, such as cutting solid metals, tubing, etc.

COCHRAN PIPE WRENCH.

The Cochran Pipe Wrench Manufacturing Company, 78th street and Woodlawn avenue, Chicago, is marketing the Cochran pipe wrench shown in an accompanying illustration. It is warranted to give 50 per cent. more service than conventional designs, and the guarantee is very liberal. One of the qualities of the tool emphasized is that the compression strain is exerted on that part of the member which is the strongest.

The frame and handle are one solid piece, and a rocker replaces the usual pin, eliminating opportunity of shearing stresses. The jaw is of the hook type and is with the inserted jaw, drop forged from the best grade of tool steel. The



Cochran Pipe Wrench Having a Solid Frame and Movable Hook Jaw.

rocker and adjusting nut are also constructed of high grade material.

The maker claims a perfect grip and release by its construction, and states that the tool cannot be injured by a side pull, owing to its solid frame construction. It is guaranteed not to crush or lock on pipe. The Cochran wrench is made in six, eight, 10, 14, 18, 24 and 36-inch sizes, taking from .125-inch wire to .5-inch pipe for the smallest size, and upwards for the larger wrenches. All parts are standard and interchangeable.

MOORE CHAIN HOIST.

The Chisholm & Moore Manufacturing Company, Cleveland, O., maker of chain hoists and trolleys, is marketing the Moore anti-friction chain hoist shown in an accompanying illustration. It is produced in capacities ranging from one-half to 10 tons and is provided with an improved automatic brake which locks the load at all points and yet permits of a very free and smooth lowering movement.

The brake is adjustable, permitting of lowering the load more freely, and all friction surfaces require no oiling as they are self-lubricating. The locking device is released by a slight reverse pull on the hand chain. The maker states that it has less working parts than any other hoist except the direct differential, and that spur gears are utilized.

Moore Anti-Friction Chain Hoist.

The chains are made of the highest grade material and are tested and stretched to gauge on a pull of 100 per cent. greater than the maximum load they are intended to carry. The height of lift varies from eight feet for the half-ton hoist to 12 feet for the 10-ton member. By utilizing two extra feet of both main and hand chain an additional foot of lift may be obtained. The company will forward catalogue free upon request.

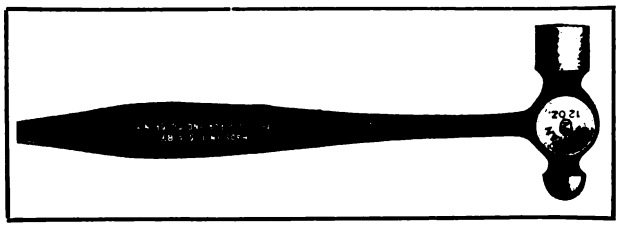
SPARTON HAMMER.

The Drop Forging Company, Jersey City, N. J., is manufacturing the Sparton hammer, shown in an accompanying illustration, and the maker



Sparton Hammer, Combining Screw Driver, Tire Iron, Etc.

calls attention to the design, stating that it is particularly adapted to motor car work where a hammer, screw driver and tire iron are constantly required. It is also claimed that it has the essential qualities of a general utility tool.

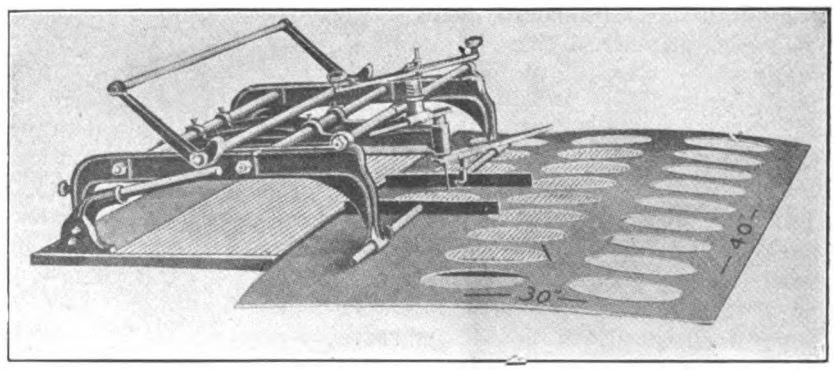
The Sparton is a one-piece drop forging of tool steel, properly hardened and tempered, and the metal is so distributed as to provide a good balance. The hammer head is so shaped that it gives an easy and positive grip when the tool is being used as a screw driver or as a tire iron. The manufacturer claims a scientifically developed design of strength and durability, and the workmanship and material are guaranteed. The Sparton combination tool is moderately priced.

STARR OVAL CUTTER.

Cutting circular gaskets, etc., is a simple matter compared to oval members, and generally considerable time is required with the latter in order to obtain perfect work. The Shawver Company, Springfield, O., is marketing a practical device, for cutting ovals, termed the Starr-Springfield cutter, which is shown herewith. The No. 1 tool will cut any size circle up to 15 inches, and oval up to 15 by 22 inches. The No. 2 cuts circles up to 22 inches and ovals to 22 by 34 inches.

The bars are graduated by inches and fractions of fourths, permitting the operator to set the machine instantly to cut the size of opening previously determined. The machine is equipped with an automatic stop, limiting the downward movement of the knife, making it impossible to cut into the table top. The four corners have adjustments for raising or lowering, so that the machine may be levelled to conform to the table surface.

A quick acting clamp is provided for holding any thickness mat board up to .25 inch, and is quickly adjusted to any size opening. When the machine is not at work the clamp and its components rise from the table, a feature the maker states is not found in any other oval cutter. The complete equipment includes a cutting board, one wheel glass cutter, one embossing wheel, one knife for cutting 23-degree bevel edge, one knife for cutting a square edge, one stub knife for cutting long, narrow ovals, and a wrench.



Starr-Springfield Oval Cutter, Which Will Also Cut Circles up to 15 Inches.

RAD-FIX RADIATOR COMPOUND.

Rad-Fix is manufactured by the Radiator Fix Company, 121 Massachusetts avenue, Boston, and as the name implies, it is compounded to repair leaky radiators. One of the qualities emphasized in it is that it is a filtered solution and will pass easily through the screen of the radiator. It is a chemical solution and the maker states that its action on lead, copper and brass causes crystallization of the metals on the outside of the radiator, forming a permanent weld.

It is left in the cooling fluid and is held to possess cleansing properties as well as to improve the cooling. Rad-Fix is stated to boil at 260 degrees Fahrenheit, considerably above water, an advantage in service on mild days, and to freeze at 26 degrees, six below that of water. Rad-Fix is sold in gallon cans and is accompanied by a strong guarantee.

NATIONAL TELESCOPE PUMP.

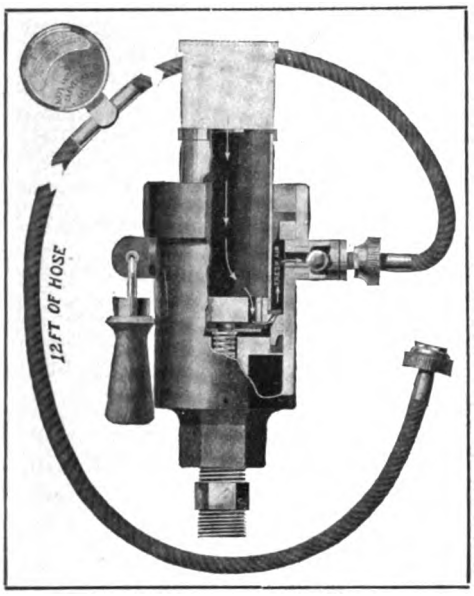
The National Motor Supply Company of Cleveland, O., has just placed on the market a new pump of the spark plug style, which is termed the National Telescope pump. It is designed along novel lines and differs from those marketed in a number of particulars, as will be noted by the accompanying illustration. The body is made from close grained cylinder iron and is carefully machined inside. A floating piston, containing a metal piston ring, has a brass tube attached to its upper side. As the piston in the engine cylinder moves up and down the compression and suction move the piston in the pump in a like manner, causing the brass tube or piston stem to slide in and out at the top of the pump.

The compression chamber is between the walls of the brass tube and outside body. As the piston moves downward the fresh air is drawn in through the hole in the top of the pump, passes the valves through the piston and enters the compression chamber to break the vacuum, as is shown by the arrows in the illustration.

The two parts of the piston head are machined from a solid steel bar, making for dura-

Digitized by Google

bility. The best of material is employed throughout and all parts are machined to very close limits. A feature of the National is a neat wooden handle for tightening or loosening it in the cylinder. The pump comes equipped with 12 feet of woven cover hose and a dial pressure gauge when ordered. A half and .875-inch nipple is supplied with each, and metric sizes when desired. The pump is moderately priced.



National Telescope Pump.

GEMMER MOTOR STARTER.

The Gemmer Starter Company, 112 Ford building, Detroit, has brought out a new air motor starting system for both new and used cars, and the design presents interesting features, among which is the elimination of the distributor and piping to the cylinders, a construction generally employed with starting systems utilizing compressed air. It is the invention of G. A. Gemmer, formerly of the Gemmer Manufacturing Company, who conducted a series of experiments to obtain a compressed air motor starter which could be utilized without a distributor valve, tubing, etc.

The Gemmer air starter shown herewith, resembles the electric motor starter in appearance and some idea of its compactness may be obtained from the dimensions, which are given as eight inches long, eight high and four wide. One of the qualities of the Gemmer unit is that it may be utilized as a compressor for storing a tank or as an air motor to spin the crankshaft of a gasoline engine.

These qualities are obtained by driving the Gemmer through a suitable train of gears as a compressor, energy being supplied by the motor car's engine, and by reversing the operation the unit may be utilized to rotate the crankshaft of the motor. When used as a compressor the Gemmer may be driven at from 100 to 1600 revolutions a minute as desired, but when reversed, the ratio of drive is about 7:1, spinning the crankshaft at a speed of 150 to 225 revolutions a minute.

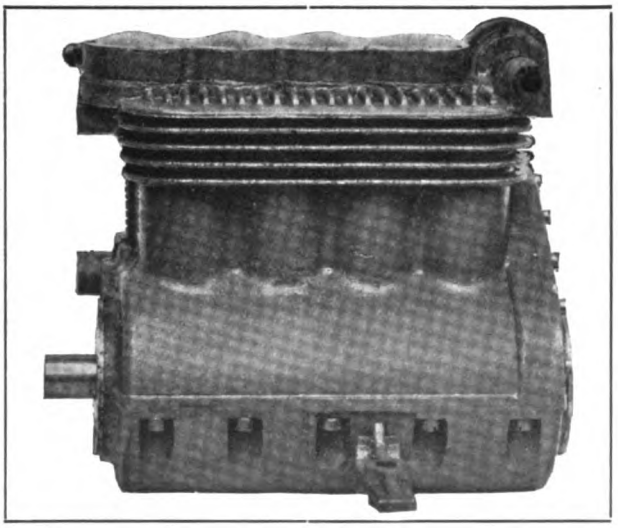
The operation of the combined unit is very simple. Depressing a button by the foot engages a clutch and gearing, setting the compressor into motion and charging a tank. When the dash gauge indicates the desired pressure, say 200 pounds, the clutch is released and the unit is inoperative until replenishing the supply of air in the tank is required or the unit is utilized for starting.

For starting, a button is depressed, permitting air to flow from the tank to the unit, and it continues to spin the crankshaft of the motor until the engine starts under its own power, whereupon disengagement is made automatically. The unit is stated to be very efficient as a compressor, the maker claiming it will replenish the supply of air in the tank in five minutes. There is but one controlling valve, that located on the dash, and it is held to be positively leak proof. The piping plan is very simple, one pipe leading from the unit to the valve and from the latter to the tank. Particular attention has been paid to connections, etc., and it is stated that the pressure in the tank is maintained under all conditions.

The motor-compressor is constructed of high grade material and on principles indorsed by sound engineering practise. The pistons, rings, etc., are ground accurately to size, and the crankshaft is a drop forging of ample dimensions. All working parts are fully enclosed and dust proof. The mechanism is lubricated automatically from the crankcase.

The net weight of the Gemmer air starting system is about 55 pounds, and the inventor states that it is very economical of air, and that a large number of starts are possible with the tank filled. The design includes hose, etc.

The following suggestion for starting seized pistons is made by a repairman: Place about a pint of kerosene in each cylinder, then jack one of the front wheels so that it clears the ground by at least two inches. Next place a jack under the starting handle with the clutch section engaging with the crankshaft. Lower the jack under the wheel until the jack under the handle carries the weight of the machine. It is stated that this method will start the most obstinate piston.



Gemmer Air Motor Starter, Which Operates as a Compressor and Is Reversed to Spin Crankshaft of Gasoline Engine.

THE ACCESSORY AND GARAGE JOURNAL
Devoted Exclusively to the Automobile Trade and Allied Interests

VOL. III. FEBRUARY, 1914. NO. 10.

AUTOMOBILE JOURNAL PUBLISHING CO.
Times Building Pawtucket, R. I.
William H. Black, Treasurer. D. O. Black, Jr., Secretary.
Publisher of
THE AUTOMOBILE JOURNAL THE MOTOR TRUCK

Offices in New York, Chicago, Detroit and Boston

SUBSCRIPTIONS.

The United States and Mexico, the year, $2 in advance; Canada and Foreign Countries in Postal Union, the year, $3 in advance. Twenty cents the copy.

CONTRIBUTIONS.

Anonymous communications not considered. Correspondence on subjects relating to the motor industry and the trade will receive attention. Stamps must be enclosed to insure return of unsolicited contributions.

ADVERTISING.

Information supplied at request.

Advertising Copy for the ACCESSORY AND GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

THE BIG BOSTON DISPLAY.

From the very inception of the automobile industry the annual Boston show has been the largest of the year in number of makes on display, in attendance and in total sales. For several years it has been the largest automobile show in the world, when the number of individual vehicles on exhibit is considered. And this year, when every show is a big show—bigger and better than ever—those in charge of the arrangements for the Boston display, headed by that veteran manager, Chester I. Campbell, promise some interesting surprises.

New England is, and always has been, the greatest motor vehicle market in the world. Boston is within easy access of every town and city in the six states. The increased interest in motor cars and motoring in the Maritime Provinces of Canada in recent years has added the population of that section to the list of those making up the record attendance. Boston, therefore, occupies a unique position as distributing centre, and there is every reason to believe that Manager Campbell and the association which he represents will be able to maintain for it the supremacy so long held by the Boston show.

And it ought not to be forgotten that the Boston commercial vehicle display is the only exhibition of that character of national prominence scheduled for 1914. The importance of New England in a commercial and manufacturing way makes this section of the Boston automobile show of decided interest to the industry. Manufacturers and dealers should make every effort to take full advantage of this splendid opportunity.

THE STEEL MARKET.

There will be little disposition to question the statement that the condition of the steel market is regarded as an important indication of business conditions generally. At the close of business, Jan. 31, the United States Steel Corporation, which does considerably more than half of the steel business in this country, reported an increase in unfilled orders on the books of its subsidiary companies of 331,572 tons. This is the first time an increase has been reported by this concern since Dec. 31, 1912.

At the beginning of the year the United States Steel Corporation was operating at less than 40 per cent. of its total capacity. At the close of the first month in the year the operations were in excess of 75 per cent. of the total ingot capacity. These facts, taken in connection with the condition of the metal market generally, are sufficient justification for the optimistic predictions made just previous to the close of 1913.

BIG GAIN IN EXPORTS.

Once in a while some one starts a story that the automobile industry has about reached the point where the supply is to exceed the demand. The cry was first raised in 1907, but the manufacturers produced more cars in 1908 than they ever had before. A few months ago, so-called business interests were absolutely certain that the maximum output had been reached. It is interesting, in this connection, to read the advance report of the bureau of statistics, Department of Commerce, Washington, D. C., respecting the value of cars and parts shipped abroad during 1913.

The detailed figures are not at hand at this writing, but the advance report indicates that there was a gain of nearly $5,000,000 over the previous year. In round numbers, $28,000,000 worth of cars and parts were shipped abroad by American manufacturers in 1912, and $33,000,000 in 1913. During each month of the year, 1913, with the exception of November, there was a decided gain in the value of pleasure and commercial vehicles, over the corresponding month of the previous year. The demand for American made automobiles is by no means confined to the United States, it would appear.

Digitized by Google

BIG ORDERS FOR STEEL IN JANUARY.

At the close of business Jan. 31, 1914, the United States Steel Corporation reported unfilled orders on the books of its subsidiary companies aggregating 4,613,680 tons, which was an increase of 331,572 tons during the month. This was the first increase in unfilled orders since Dec. 31, 1912, when the backlog was 7,932,164 tons. The net loss in orders during 1913, as noted in the annual review, was 3,650,056 tons.

The indication is that the company's subsidiaries booked orders for rolled products in January aggregating aproximately 1,057,000 tons, while the shipments were about 725,000 tons, being approximately the same as the output, while the production of steel ingots was a little over 1,000,000 tons. At the beginning of the year the United States Steel Corporation was operating less than 40 per cent. of its total capacity, and at the end of the first month operations were in excess of 75 per cent. of ingot capacity.

The average operations of the open hearth furnaces and Bessemer converters in January were considerably over 60 per cent., indicating that the average daily production in ingots was about 39,000 tons and that rolled steel products were produced at the rate of about 28,000 tons a day, during the 26 active days of the month. New orders were taken at the rate of a little under 40,700 tons a day; that is, the new business exceeded the output and shipments by about 12,700 tons a day.

EXPORTS AGGREGATE $33,299,567.

Gain of Nearly $5,000,000 in Value of Motor Vehicles and Parts Shipped Abroad in 1913.

Advance reports from bureau of statistics, Department of Commerce, Washington, D. C., showed total value of motor vehicles and parts shipped abroad by American manufacturers during 1913, was $33,299,567. The figures for 1912 were $28,308,118, indicating a gain of $4,991,449.

Passenger cars to the number of 25,880, valued at $25,342,644, and 1009 commercial vehicles, valued at $1,686,807, were exported in 1913, as against a combined export of pleasure and commercial cars, numbering 23,720, and valued at $23,703,989, in 1912, and 15,807 cars, valued at $15,924,361, in 1911. Exports of parts, exclusive of engines and tires, aggregated $6,270,116 during 1913, as against $4,604,129 in 1912.

ANNUAL MEETINGS.

Croce Automobile Company, Asbury Park, N. J., has elected the following officers: President, Samuel A. Reeves; vice president, Albert Robbins; secretary-treasurer, Harry A. Watson. The Croce Automobile Company was incorporated in September, 1912, with a capital stock of $250,000, to manufacture motor trucks.

The Vacuum Oil Company, Rochester, N. Y., is to hold a special meeting of its stockholders the end of this month, to act upon a resolution to extend corporate existence 50 years. The annual meeting will be held at the same time.

The La Crosse Motor Truck Company, La Crosse, Wis., has elected the following officers: President, Fred Noetzel; vice president, Herbert Lewis; secretary and treasurer, F. Ristow.

The Keystone Vehicle Company, Reading, Penn., has elected the following directors: Robert E. Brooke, George Brooke, Edward C. Nolan, J. Bennett Nolan, John L. Coxe, F. Burmeister, John H. Herb and H. P. Burmeister. The directors have chosen the following officers: President, John H. Herb; treasurer, J. E. Ely; secretary and general manager, H. P. Burmeister.

The F. B. Stearns Company, Cleveland, manufacturer of Stearns-Knight cars, held its meeting recently and re-elected the following officers: President, Frank B. Stearns; vice president, Roy F. York; secretary and treasurer, E. McEwen.

The Rubbermix Manufacturing Company, Toledo, O., at its annual meeting elected the following officers: President, E. A. McLain; vice president, G. R. Reiter; secretary, Douglas McLain; treasurer, George Grasser.

DIVIDENDS DECLARED.

Fisk Rubber Company, Chicopee Falls, Mass.; quarterly, first preferred, 1¾ per cent.; payable Feb. 1.

Kelly-Springfield Tire Company, New York City; quarterly, 1½ per cent.; preferred; payable April 2.

Peerless Motor Car Company, Cleveland, O.; quarterly, 1¾ per cent.; preferred.

Rauch & Lang Carriage Company, Cleveland, O.; quarterly, 1¾ per cent., preferred; 2 per cent., common; payable Jan. 1.

United States Rubber Company, New York City; quarterly, 2 per cent., first preferred; quarterly, 1½ per cent., second preferred; quarterly, 1½ per cent., common; payable Jan. 31.

Studebaker Corporation, Detroit; quarterly, 1¾ per cent., preferred; payable Feb. 20.

Chalmers Motor Company, Detroit; 1¾ per cent., preferred; 2½ per cent., common; payable March 1 to stockholders of record Feb. 20.

Standard Oil Company of New York, New York City; $2; payable March 16.

FINANCIAL NOTES.

The Buffalo Auto Station Company, Buffalo, N. Y., has increased its capital stock from $10,000 to $75,000.

The Yaeger Motor Car Company, Louisville, Ky., has increased its capital stock from $6000 to $8000.

The Motor Car Manufacturing Company, Indianapolis, has found it necessary to increase its capital stock from $150,000 to $250,000.

The Hartford Rubber Works Company, Hartford, Conn., has increased its capital stock from $1,000,000 to $2,000,000.

The Timken Detroit Axle Company, Canton, O., has decreased its capital stock from $1,000,000 to $942,500.

The G & J Tire Company, Indianapolis, has increased its capital stock from $1,000,000 to $2,000,000.

The Long Manufacturing Company, Detroit, has increased its capital stock from $300,000 to $400,000.

The Auto Lite Company, Toledo, O., has increased its capital stock from $100,000 to $225,000.

PRICE SITUATION IN GENERAL MATERIAL MARKET.

The tabulation below presents the high and low prices for commodities listed for each week during the past month, as well as the prevailing prices at the beginning and ending of that period, for purposes of comparison:

	Jan. 19		Jan. 26		Feb. 2		Feb. 9

QUOTATIONS ON AUTOMOBILE SECURITIES.

The condition of the stock market, as applying to the automobile securities, is indicated by the tabulation below, which shows the high marks reached by the several stocks listed during each week of the past month, and in comparison with the conditions existing at the same time last year. It will be noted that, in most instances, there has been a steady increase in prices, particularly when comparison is made with 1913. The tone of the automobile securities market is especially good, and affords additional grounds for optimistic predictions concerning the possibilities for business by all connected with the industry during the 1914 season.

NEW LOCATIONS AND REMOVALS.

The Elliott Motor Company, Suffolk, Va., has moved into its new and spacious building on Washington street.

Wolflin Bros., Amarillo, Tex., agent for Buick cars, will remove into its new garage at the corner of Polk street.

Robert Ver Plank and Joseph Buch, Trenton, N. J., owners of the Trenton House garage, will remove into new quarters on South Warren street as soon as improvements have been completed.

The Knight Garage and Bradford Automobile Company, New Haven, Conn., will occupy the new building being erected at 249 George street. It will cost $50,000.

E. A. Zolle, Minneapolis, Minn., manager of the Pathfinder Motor Company, has removed into new quarters at 217 South Sixth street.

The John & Arthur Supply Company, Boston, Mass., will remove to new quarters at 117 Massachusetts avenue. The former address was 749A Boylston street.

Wentz & Rosauer, Hamilton, Ia., is now located in its new building at North Chestnut avenue.

The Nolan Tire & Rubber Company, Birmingham, Ala., has moved into its new building on Avenue D.

The Keystone Auto Top Company, Philadelphia, Penn., has located its business at 661 North Broad street. The company handles the Jiffy automobile curtains.

The St. Louis Stearns Auto Company, St. Louis, Mo., has moved into its new quarters at 3030 Locust street.

The Van Allen Tire Company, Houston, Tex., will remove to a new location in the near future.

The Brice Auto Company, Minneapolis, has removed into larger quarters at 1410 Hennepin avenue. The company handles the Grant and Detroiter cars.

The Pontiac Motor Car Company, Pontiac, Ill., has moved from the old Armor building on West Madison street to its new garage on Washington street.

The Chalmers Company, Philadelphia, Penn., has moved into its new quarters at 252 North Broad street, which will facilitate better handling of its stock.

The Heydt-Haast Company, Reading, Penn., agent for the Hudson Six cars, has completed its up-to-date building at 415 Washington street and will move into it at once.

The Missouri Auto Specialty Company, St. Louis, Mo., will remove to larger quarters at the corner of 19th and Locust streets.

S. A. Foster, Hartford, Conn., Rambler dealer, has removed from Elm street to 343 Trumbull street. The old location is now occupied by Russel P. Tabor, Reo distributor, as a service station.

The Morristown Automobile School, Morristown, N. Y., has taken over the property near Sussex avenue, now in course of erection, at a cost of $63,000. A garage will be located on the first floor.

The Central Motor Car Company, Reading, Penn., has completed a first class fireproof garage on Pearl and Chestnut streets.

H. B. Perrin & Son, Mankato, Minn., has greatly enlarged its salesroom and garage and added the Ford car agency to its other lines.

Laudahn Bros., Buffalo, N. Y., has enlarged its business. This firm repairs tires, tubes, etc., at 1114 Main street.

Drane & McKee, Corsicana, Tex., has completed the large additions to its garage and is now able to take care of 75 cars. It also has added a large stock of accessories and supplies.

The Pedneau Garage & Machine Works, Raleigh, N. C., plans to establish a garage and machine shop business on Elm street.

Frank Eisenshon, Keosauqua, Ia., has finished his new garage at Douds, and several new livery automobiles have been installed. The building is of steel and concrete, and presents a neat appearance.

Folkens & Siebrands, George, Ia., have discontinued the garage business there and will reopen in Sioux Falls, S. D., under the name of the Siebrands-Folkens Auto Company.

Harvey Sellers and Peter Addriotti, Richmond, Cal., will remove to Kinsburgh, Cal., and will open a garage there.

The Page Garage, De Smet, S. D., has added a repair shop to its garage and also increased the storage capacity to double its former proportions.

The Arkansas Valley Auto Company, Pueblo, Col., has erected a two-story fireproof garage, 38 by 120 feet, at Seventh and Court streets. A novel feature is the "Radiator" front. The centre of the building presents a Ford radiator, made in the brick, on each side of which is located a lamp to represent a headlight.

FIRES OF THE MONTH.

Auto Supply Company, Daytona, Fla.; garage.

Coe Brass Company, Torrington, Conn.; garage damaged by gasoline explosion.

Karlem Garage, Monroe, Wis.; garage and automobiles; $300,000.

Monroe Manufacturing Company, Monroe, Wis.; garage and wagon factory; $125,000.

Clinkscales & Crowthers, Clemson College, S. C.; livery stable, garage and contents.

John Ruggles, Anita, Ia.; garage.

W. H. Pattermole, Northville, Mich.; garage; $9000.

George Brecht, Ogontz, Penn.; garage; $2500.

San Marcos Auto Company, San Marcos, Tex.; garage.

Owen D. Sherley, Pen-Mar park, Hagerstown, Md.; garage; $8000.

Fred Norris, West Springfield, Mass.; garage.

Suffolk Garage, Lynn, Mass.; $75,000.

Auto Repair Company, Baltimore, Md.

Liquid Filler Company, Baltimore, Md.

Moore & Munger, 602 West 52nd street, New York City; 50 automobiles and damage to other property; $100,000.

Grant Garage, Emwilliam place, Ossining, N. Y.; garage.

Lintott Garage, Railroad avenue, Nashua, N. H.: garage damaged by an explosion.

Samuel Goldberg, 32 Lansing street, Utica, N. Y.; garage.

Herbert Clarke, 2031 North 29th street, Philadelphia, Penn.; damage to garage and automobiles; $5000.

Vulcan Iron Works, 106 Bayard street, Brooklyn, N. Y.; garage, $10,000.

C. P. Shaw, Chatwood, Westchester, Penn.; garage; $2000.

Island Garage, 1425 Jefferson avenue, Detroit, Mich.; garage and 10 cars destroyed; $20,000.

Dr. Dunton, Paris, Ont.; garage; $2000.

Stationary Marine Engine, Motor & Supply Company, Port Washington, L. I.; boats and airships, also factory completely destroyed; $250,000.

William B. Houghton, Springfield, Mass.; garage.

The Standard Motor Car Company, New Bedford, Mass.; factory and machines; loss not stated.

Wakefield & Boston, Cedarville, Cal; garage and machinery; $4800.

Dixie Auto & Welding Company, Shreveport, La.; garage and machinery; $33,000.

Overland Motor Company, Chicago, Ill.; salesroom.

Charles W. Miller, Quincy, Mass.; garage; $15,000.

Erie Taxicab Company, Erie, Penn.; $10,000.

FOREIGN TRADE OPPORTUNITIES.

(Address Bureau of Foreign and Domestic Commerce, Washington, Giving Number, Which Will Forward Correspondence, Unless Otherwise Stated.)

12,357, Automobile Chassis—The American consul at Madrid, Spain, reports that a public competition is announced for the purchase of three automobile chassis, the cost of each of which is not to exceed $2700, for use in the fire department to carry life saving apparatus and fire extinguishing materials.

12,369, Engines for Small Parcel Cars—An American consular officer in the United Kingdom reports that a firm of engineers in his district has requested to be put in touch with American firms manufacturing light, single-cylinder, two-stroke engines, suitable for use in small parcel cars.

12,321, Motorcycle—A report from an American consul in the West Indies states that an inquiry has been made at his office for a motorcycle, with a view to purchasing one as a sample and then establishing an agency. Descriptive catalogues, prices and proposed terms addressed to the consulate in question will be promptly turned over to the person making the inquiry.

12,428, Motor Trucks—A well known firm with establishments in India, the Red Sea coast and East Africa, informs an American consulate that it desires to purchase one or more gasoline motor trucks, capacity three tons, the rear wheels protected by flat iron tires. Correspondence should be in English, and illustrations of motor trucks and prices should be sent directly to the firm in question.

12,439, Graphite—A prominent British firm, which states that it has had previous experience in purchasing graphite and furnishes references, informs an American consulate that it would like to hear from American firms desirous of securing a purchasing representative in Madagascar.

12,228, Motor Cars and Cycle Accessories—A well known and reliable sporting goods firm in South Africa informs an American consul that it wishes to establish trade relations with a firm having a complete line of motor cars and cycle accessories. Exclusive territory is desired and complete details in every particular should be submitted when communicating with this firm, as it is very essential that as little time as possible be lost in negotiations.

12,452, Agricultural Machinery, Automobiles and Motor Boats—A firm in a European country informs an American consular officer that it desires to get into touch with American exporters of gasoline and crude oil tractors, steam plows, thrashing machines, reapers, binders, automobiles, motorcycles and motor boats. Correspondence should be in German.

12,460, Light Cars and Cyclecars—An automobile engineer desires to secure the names of manufacturers of light cars and cyclecars.

Silence Your Transmission and Differential

Noise in your gears is a danger signal—it means wear—it promises trouble.

Dixon's Graphite Transmission and Differential Grease, No. 677, stops the noise—minimizes wear—removes the trouble—by giving the kind of lubrication no grease alone can give.

The finely ground flakes of natural graphite are carried with the grease to all the gear surfaces, and some of them identify themselves with the metal in a frictionless veneer which stops the grinding and the noise—reduces the wear—saves engine power—makes the car go faster, smoother, longer.

Get acquainted. Send for "Lubricating the Motor", No. 49.

WINSOR PATENT ADJUSTABLE MOTOR VALVE REMOVER

TO USE: Remove spark plug, insert Barrel A and screw down spindle with fingers, which prevents valve from lifting. Attach adjustable chain to Lever B which revolves around the spindle A. Hook chain to adjustable Lever C. A slight depression, because of the enormous leverage obtained will compress valve spring, permitting of easy removal of locking mechanism. Note the length of Barrel A and Lever B, accommodating every type of motor.

Made in sizes to fit all spark plug openings. In ordering, state size of spark plug.

LIST PRICE—Enameled black, each $2.50. Nickel plated, each $5.00

Extra barrels, each $1.50.

Dealers, Write Today for discounts. Manufactured by

Winsor Manufacturing Co., 55 Eddy St., Providence R. I.

Automobile Journal Publishing Co.
Publishers of
AUTOMOBILE JOURNAL MOTOR TRUCK
Times Building, Pawtucket, R. I.

"Best car I ever drove! Runs great—just as smooth and steady and regular as a clock."

"Haven't had a bit of ignition trouble all season. In fact, after 2000 miles running my original set of six dry cells is still in good shape. I often wonder why I stood for all the trouble which infested my last season's driving, and as for speed—why, I didn't think this car was capable of it! And power too! It eats up the hills in great shape. Then, too, I get better ignition at lower speed. Can throttle down to a walk and go through traffic as slow as you please on high gear with nary a miss.

"Yes, I switched over this season from a——magneto to the Atwater Kent System. Never did a more satisfactory thing since I've been driving.

"I am going to get a 1914 Model, but it must have the Atwater Kent System, as I am satisfied that there is no ignition that will give the satisfactory results, the service and comfort that comes from using an 'Atwater Kent' equipped car."

You will want to know more about the Atwater Kent System and if you will write us we shall be glad to mail you a copy of our latest literature—Circular L.

PANHARD OIL

Dealers' Bulletin No. 4

If poor oils and greases would only show immediately the harm they do, no one would buy them more than once. Unfortunately it takes time for friction to destroy a bearing, or even for a carbon deposit to form.

Still if you are building for a permanent trade, you must sell an oil that will give permanent satisfaction. Sooner or later car owners will learn to place the blame for engine trouble where most of it really belongs,—poor lubrication. Are **you** preparing for that time?

PANHARD OIL is a Pennsylvania product. It was first sold in 1904. While other brands have come and gone, it has more than held its own,—always uniform, always the best. It will help the work you turn out to make good and satisfy your customers. Isn't this your main object?

Write for details of our selling plan. It will appeal to you. We have many distributing centers. One is near you.

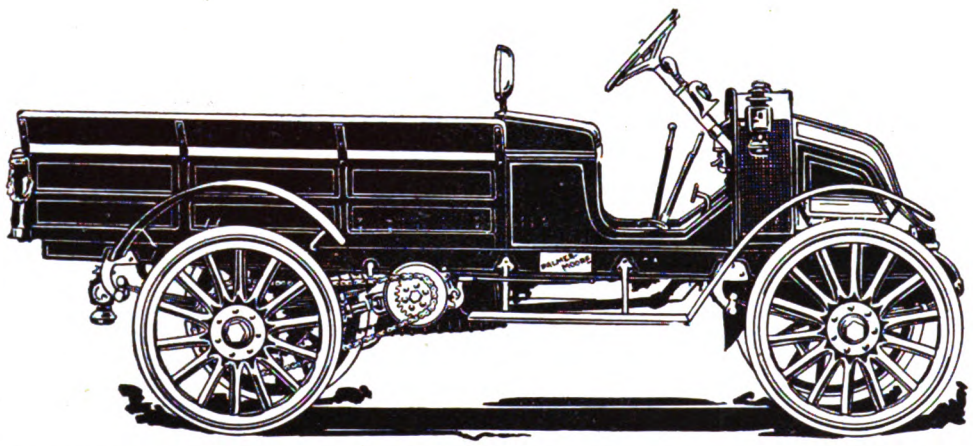
For Your Attention, Mr. Dealer



Open Express (water cooled) with sliding gear transmission. Price, $1,425.

Why you should handle Palmer-Moore Trucks.

1. *Quality* and *appearance* give them a distinction and merit all their own. Palmer-Moore trucks are made solely for dependable service. Their snappy clean cut appearance and smooth running qualities compel attention. They are a real advertisement for the progressive business house.

2. They stand the *most rigid tests* and meet the highest requirements of the light delivery field. Sturdiness of construction, simplicity of mechanism and flexibility of motor are watchwords of Palmer-Moore success.

3. *Liberal commission* and *hearty factory cooperation.* We seek only the best representatives—such that will appreciate our aggressive efforts to increase their business and insure the constant success of our trucks in service.

VEEDOL

Will Be Your Best Business-Builder

A proven oil made from Pennsylvania petroleum, the result of our 30 years of experience with every kind of lubricating oil.

We have tested it not only by every method known to modern science, but also in actual service under the severest conditions in every standard type of car.

VEEDOL will give satisfaction; it will bring in the repeat orders, because your customers will find that it affords the most nearly perfect lubrication with the least carbon deposit.

We do not claim that VEEDOL will eliminate ALL friction; that as it burns it will deposit absolutely no carbon—there will never be a PERFECT lubricating oil.

VEEDOL is the **most nearly perfect** that has ever been produced. Its gravity, viscosity, flash and fire tests; its lubricating value at operating temperatures, make it the ideal internal combustion engine lubricating oil. Car owners will learn these facts as soon as they give VEEDOL a trial. They will be asking for it everywhere. All your customers will be talking about VEEDOL.

We want a responsible representative in every automobile center of the country. There's a big business opportunity for you if there is no agent in your vicinity. Write at once for particulars of our new selling plan. We back up our representatives with the most intensive consumer advertising campaign ever put in operation for a lubricating oil.

TRADE EDITION

THE ANNUAL BUYER'S AND SELLER'S NUMBER

OF THE

ACCESSORY AND GARAGE JOURNAL

APRIL ISSUE

Analyze the distribution of this edition. The following tabulation emphasizes the quality and worth of the readers. The service and distribution is backed by any guarantee requested by users of space. The figures tell the story. The April number of the Accessory and Garage Journal will accord advertisers the greatest circulation to trade interests ever offered. It is the buying season. It is your time to sell.

11,287 GARAGES
14,988 DEALERS IN VEHICLES
7,954 REPAIR SHOPS
8,465 CONCERNS SELLING SUPPLIES
2,764 DEALERS IN FORD MACHINES
285 JOBBERS IN ACCESSORIES, PARTS, EQUIPMENT, ETC.

The above includes practically every live listed concern in the buying and selling ends of the industry. All leading manufacturers in their respective lines will be reached as well.

To secure the same trade service through any other channels would cost many times what is charged for page space in this edition.

RATES:

One Page—$60. Half Page $36. Quarter Page—$24. Eighth Page—$14.

MAKERS POOL THEIR PATENT INTERESTS.

Kardo Company Becomes Holding Concern for Axle Rights and Will Issue Licenses to Other Manufacturers---General News of the Industry and the Trade.

AN ANNOUNCEMENT of unusual interest to the industry is made in connection with the organization of the Kardo Company, Cleveland, O. It is understood that the concern, which is capitalized for $1,000,000, will be in the nature of a holding company, taking over certain axle patents heretofore held by the Packard Motor Car Company, Detroit; Peerless Motor Car Company, Cleveland, and American Ball Bearing Company, Cleveland. The officers are: President, Alvan Macauley of the Packard company; vice president, Theodore W. French, Peerless; secretary and treasurer, Fred C. Dorn, American Ball Bearing Company. The directors include: F. S. Terry, connected with the National Electric Lamp Company, a General Electric subsidiary; Walter C. Baker of the ball bearing company, and Milton Tibbetts, patent counsel for the Packard company. The published statement of the company follows:

The Packard Motor Car Company, the Peerless Motor Car Company and the American Ball Bearing Company, have, since the earliest days of the industry, independently and at large expense, developed axles that they believe are best suited to their respective trades. The patents on these axles, pertaining as they do to component parts, are so closely corelated and interlaced that the axles of either of the companies cannot be built without infringing the patents of other companies.

This three-cornered patent situation has been a vexatious question for some time, each company claiming that the others and the trade generally infringe its axle patents, and litigation has been frequently threatened. The situation became so acute and disturbing recently that a way was sought to relieve it. Careful study made it evident that the industry, including the three companies whose patents were directly involved, and automobile users generally, were interested in the final outcome and would be benefited by the removal of the menace and the avoidance of expensive and wasteful litigation. It seemed, therefore, that the patents should be so owned that licenses under them might be enjoyed upon reasonable and equitable terms by all manufacturers and users.

The patents are now owned by the Kardo Company. Some licenses under them have been granted and the company is negotiating others at the present time. Of course the usual royalty reservations will be made, and manufacturers will receive licenses that will insure them the right to make and sell to their customers axles that are free from charges of infringement. It is sincerely hoped and confidently expected that no litigation whatever will be necessary to the accomplishment of this constructive work.

New Plant Which Stutz Motor Car Company Will Erect in Indianapolis, Ind.

NEW STUTZ PLANT.

Additional Details Concerning Factory of Well Known Indianapolis Concern.

As stated recently in Accessory and Garage Journal, the Stutz Motor Car Company, Indianapolis, Ind., has begun work on its new plant at 10th street and Capitol avenue, on property recently purchased from Harry S. New. It will adjoin the factory occupied by the former Stutz Auto Parts Company, which is now a part of this concern. An accompanying illustration indicates the character of structure which it is proposed to erect. This will be one of the most up-to-date automobile plants in Indianapolis. It will have a frontage of 80 feet on Capitol avenue and 204 feet on 10th street, and be four stories high. The material will be concrete with brick facing.

Digitized by Google

THE AJAX FROM SEATTLE.

Company Organized on Pacific Coast to Produce an Entirely New Six-Cylinder Machine.

The Ajax Motors Company, headed by Seattle men and incorporated under the laws of Arizona, has been organized in Seattle, Wash., for the purpose of producing the Ajax car, a six-cylinder machine, which will be presented in two chassis, one fitted with a poppet valve motor and the other with an engine of the piston valve design. The list of incorporators includes George, Frank L. and Charles L. Parker.

Both engines will be six-cylinder units, with bore of 4.5 inches and stroke of 5.5, cast in pairs. The transmission will afford four forward speeds and reverse. No radius rods will be employed, the drive being through the two rear springs, transmission case, propeller rod housing and a ball and socket joint in the centre of the car. Three styles of bodies will be offered as standard, these being roadster, phaeton and touring, the latter being designed for five and seven passengers.

NEW OFFICERS ELECTED.

Men Named to Head MotoKart Company, Which Takes Over Two Older Concerns.

The MotoKart Company, which was recently incorporated, with factories at Tarrytown and Peekskill, N. Y., and offices at 1790 Broadway, New York City, has elected new officers for the company. This concern took over the business heretofore conducted by the Steinbock Engineering Company and the Tarrytown Motor Car Company. As a result of the consolidation the new officers are: President, A. R. Gormully; vice president, H. E. Steinbock; sales vice president, G. C. Wolfe; treasurer, B. J. Knerr; secretary, E. M. More; purchasing agent, F. C. Sievers.

A. R. Gormully, President, MotoKart Company.

Mr. Gormully, the newly elected president, is well known in the industry. He was born and educated in London, England, and came to Boston in 1892. He has been connected with the Gormully & Jeffery Manufacturing Company, Chicago, and the Electric Vehicle Company, New York City; Maxwell-Briscoe Motor Company, Tarrytown, N. Y., as well as other well known firms.

VULCAN ELECTRIC GEARSHIFT.

The Cutler-Hammer Manufacturing Company to Manufacture and Market That Product.

The Vulcan Electric Gearshift, heretofore made and sold by the Vulcan Motor Devices Company, Philadelphia, Penn., will hereafter be manufactured and marketed by the Cutler-Hammer Manufacturing Company of Milwaukee, Wis., under the Vulcan patents. Roger W. Griswold, president of the Vulcan Motor Devices Company, and W. A. McCarrell, chief engineer, will continue to be actively interested in the manufacture and sale of the product.

ANNOUNCES SINGER CAR.

New Company Is Incorporated Following Receiver for Palmer-Singer Concern.

A petition in bankruptcy was filed by Charles A. Singer, president of the company, Caroline H. Singer and Alexander Gillihand, against the Palmer & Singer Manufacturing Company, Long Island City, N. Y., in the United States district court in Brooklyn, March 3, and Judge Veeder immediately appointed John J. Kuhn receiver, fixing his bond at $10,000 and giving him authority to continue the business.

Soon thereafter announcement was made of the incorporation of the Singer Motor Company, with capital of $200,000, the incorporators being Charles A. Singer, C. A. Singer, Jr., and Harold Callisen. It is stated that this concern will produce the Singer car, a six-cylinder model, following closely the lines of the old Palmer-Singer, and utilizing a T head poppet valve motor. This concern has secured temporary headquarters at room 707, Longacre building, New York City, and a factory on Long Island. It is understood that A. M. Dean, formerly consulting engineer for the Palmer & Singer Manufacturing Company, has been retained in a similar capacity with this company.

TO MAKE WOODWARD PUMPS.

Concern Is Organized in Detroit for This Purpose with Capital of $50,000.

The Woodward Pump Company has been incorporated in Detroit, for the manufacture and distribution of the Woodward Impulse tire pump. The company has capital of $50,000 and the headquarters are located at 222 Third street.

The Woodward pump was placed in the market in 1913 and is said to have met with decided success. It is also stated that the firm of Joseph N. Smith & Co. of Detroit, is largely interested in the new concern and that the pump will be produced in its factory.

The officers of the company are: President, A. Woodward; vice president, E. L. Ackerman; treasurer, C. E. Blaesser; secretary, C. B. Woodward.

NET PROFITS OF $7,140,125.

United States Rubber Company Reports Substantial Increase in Tire Sales.

In view of the change of date for the ending of the fiscal year, from March 31 to December 31, the annual report of the United States Rubber Company, New York City, just made public, covers only nine months. However, the statement shows net sales of $87,349,692, and net profits of $7,140,125. This covers the products of various subsidiary companies, engaged in the manufacture of footwear, tires, mechanical and miscellaneous goods.

Included in the surplus of $1,811,268 are the earnings of certain subsidiaries for the three months ending March 31, 1913, estimated at $764,657. Deducting this and $10,939 applicable to minority interests, there remains a balance of $1,035,672. After adding 4.5 per cent. paid on the common stock, amounting to $1,620,000, the total, $2,655,672, represents the amount available for common dividends for the nine months, equal to 7.37 per cent. on $36,000,000 common outstanding, or at the rate of 9.83 per cent. a year.

TAKES OVER DEAN BUSINESS.

Garford Manufacturing Company Is Being Organized for This Purpose.

According to information from Elyria, O., the sale of all property, assets, patents and good will of the Dean Electric Company of that city has been made to A. L. Garford, who is organizing the Garford Manufacturing Company, with capital stock of $500,000 preferred and $800,000 common to take over the business.

The officers of the new company are: President, A. L. Garford; vice president and general manager, A. G. Bean. The proposition submitted by Mr. Garford provided for the exchange of preferred stock of the Garford Manufacturing Company for bonds of the Dean Electric Company, which were outstanding, amounting to $250,000; all creditors' claims, totalling $427,000, to be put in the form of notes and assumed by the Garford company to be liquidated over a period of five years.

INSURANCE AGAINST THEFT.

Gasolock Controls Fuel Supply, Preventing Operation Except by Holder of Key.

In spite of the severe penalties prescribed for the use of cars by others than those having the right to operate them, the list of machines reported stolen is rapidly increasing, and a large number of cars have practically disappeared, so clever are the bands of organized automobile thieves. As a result many owners are now carrying insurance who formerly did not deem the precaution necessary.

The Headlight Support Company, Dime Bank building, Detroit, is manufacturing the Gasolock, which is held to eliminate the need of insurance, in that it shuts off and locks the fuel supply, one of the most practical

Digitized by Google

methods of locking a machine. One of the qualities of the device is that it is easily and quickly operated from the seat. By turning a thumb button the supply of gasoline to the carburetor is shut off and locked until the owner of the key releases the mechanism by means of a Yale key, no two of which are alike.

The Gasolock presents several other practical features. It prevents waste of fuel through a flooding carburetor, and in the event of the latter catching fire because of a backfire, the supply of fuel can instantly be shut off, preventing a serious loss. As the thumb button is convenient the fuel supply may be closed and locked, and without having to stoop and search for petcocks, etc.

The Gasolock is not only neat and compact, but is nicely finished. Nickel and brass are standard and its installation is a simple matter. Two Yale keys are supplied with each lock and the third is kept by the company, filed away with the owner's number, so that in case both keys are lost a wire or letter will bring the extra key without charge and by special delivery.

The Gasolock is not only guaranteed for life, but it can be installed on any car and used over again. It is moderately priced and its cost will pay for the usual insurance. It also is adaptable to motor boats, motorcycles and cyclecars. Descriptive matter and trade prices will be forwarded upon request.

MORE WORKING CAPITAL.

Stockholders of Goodyear Tire & Rubber Company Approve Financial Plan.

Without a single dissenting vote the stockholders of the Goodyear Tire & Rubber Company, Akron, O., at a special meeting held recently, approved the plan of the directors for introducing $4,000,000 of new working capital by the sale of stock. It is understood that already present Goodyear stockholders have subscribed for more than 80 per cent. of the stock to be offered.

Officials of the company stated that additional working capital was made necessary by the growth of the business. Since 1911 this has increased from $13,000,000 a year to $33,000,000, on the basis of $10,000,000 capital stock. The company has just completed additions to its factory sufficient for the handling of a business of $50,000,000.

MOSLER FACTORY SOLD.

Street Improvements Necessitate Erection of New Plant in Another Location.

The factory of A. R. Mosler & Co., Mount Vernon, N. Y., has been sold to the Bronx Parkway Commission for $93,000. It is understood that this property will be utilized for an extension of a boulevard to Kensico. It is further stated that two new factories will be erected by the Mosler concern within six months, but the site has not yet been chosen.

ON HIS WEDDING TRIP.

A. H. Bartsch, Now a Benedict, Establishes a Score of Bosch Service Stations on Western Tour.

According to information from New York City, Alfred H. Bartsch, advertising manager for the Bosch Magneto Company, was married Feb. 10, leaving that night with his bride for Los Angeles, Cal., to witness the Vanderbilt Cup and Grand Prize races.

He joined Chief Engineer V. W. Kleisrath in Los Angeles and together they saw to it that those interested had the usual good Bosch service. On the return trip Mr. Bartsch visited the western distributors and established over 20 Bosch service stations west of Chicago. While in San Francisco he made arrangements for the Bosch exhibit at the Panama-Pacific exposition in 1915.

PURCHASES NYBERG PLANT.

A. C. Barley Expected to Consolidate This with Streator Motor Car Company.

It was announced recently that A. C. Barley of Chicago had purchased the Streator Motor Car Company's plant at Streator, Ill., and that it was expected that this concern would soon resume the manufacture of Halladay cars. Additional information reports that Mr. Barley has also purchased the plant of the Nyberg Automobile Works, Anderson, Ind., the price paid being $7500 in cash and the assumption of liens amounting to $22,000.

It is now understood that it is the intention of the new owner to consolidate the two plants and to produce both the Halladay and the Nyberg for the 1915 season. It is further stated that two very low priced models will be added to the line.

JOINS OAKLAND FORCE.

Fred W. Warner Becomes General Sales Manager, Succeeding J. B. Eccleston.

The Oakland Motor Car Company, Pontiac, Mich., announces that Fred W. Warner has been appointed general sales manager, succeeding J. B. Eccleston, resigned. Mr. Warner was originally connected with the wholesale implement business, but for the past three years has been manager of the Buick Motor Company's Chicago branch.

Six years ago he became associated with the Keating Implement & Machine Company, the oldest house of its line in the southwest, as secretary and sales manager, leaving that connection to go with the Buick.

ANOTHER BRISCOE COMPANY.

Will Produce Argo Machines in Factory Located Just Outside of New York.

The Argo Motor Company has been organized in New York City for the production of a light car in a factory to be located just outside of the city, according to the preliminary announcement. Although it is maintained by the company that the product will not be a cyclecar, but a light automobile, the description would seem to indicate that the motor dimensions and weight were to be such as to place it in the true cyclecar class.

F. D. Dorman, Secretary-Treasurer, Argo Motor Company.

A factory has been acquired in Racine, Wis., for the production of the motor, which is to be a four-cylinder unit, with bore of 2.31 inches and stroke of four, giving a displacement of 67 cubic inches. The weight will be about 700 pounds. The wheelbase is 90 inches, and body will seat two passengers side by side. Thermo-syphon cooling, splash lubrication with pump circulation, cone clutch, sliding gear transmission, shaft drive, full elliptic springs and wire wheels 28 inches in diameter are among the construction details.

The officials of the company are: President and general manager, Benjamin Briscoe; vice president and general sales manager, L. E. Latta; secretary and treasurer, F. D. Dorman.

IS EASTERN REPRESENTATIVE.

W. S. Jewell Will Cover New England, New York, New Jersey and Pennsylvania.

The Marion Motor Car Company, Indianapolis, Ind., has appointed W. S. Jewell eastern sales representative, in charge of the territory of New England, New York, New Jersey and Pennsylvania. He is well known in the trade, having been for some time manager of the New York house handling Marion cars, and his appointment may be looked upon as a distinct advance in his duties and a recognition of his powers.

ORGANIZE NEW COMPANY.

Two Well Known Ignition Salesmen Establish Headquarters in Washington, D. C.

Charles Rubel, for a number of years connected with the Connecticut Telephone & Electric Company, Meriden, Conn., has resigned as sales manager of that concern. He has organized the Rubel Company, with headquarters at 1312 14th street, N. W., Washington, D. C., and has interested Elmer H. Holenthal as a partner. The latter was formerly connected with the Bosch Magneto Company, New York City.

GENERAL NEWS OF THE MANUFACTURERS.

The Kahlenberg Bros., Two Rivers, Wis., which manufactures gasoline motors for marine purposes, has perfected a compact motor utilizing kerosene, heavy fuels and gas.

The Hauck Manufacturing Company, Brooklyn, N. Y., has invented and patented kerosene hand torches for use in repair shops for preheating in connection with welding, straightening axles, chassis brazing, etc. The company will also put on the market patented furnace burners for attachment to annealing furnaces.

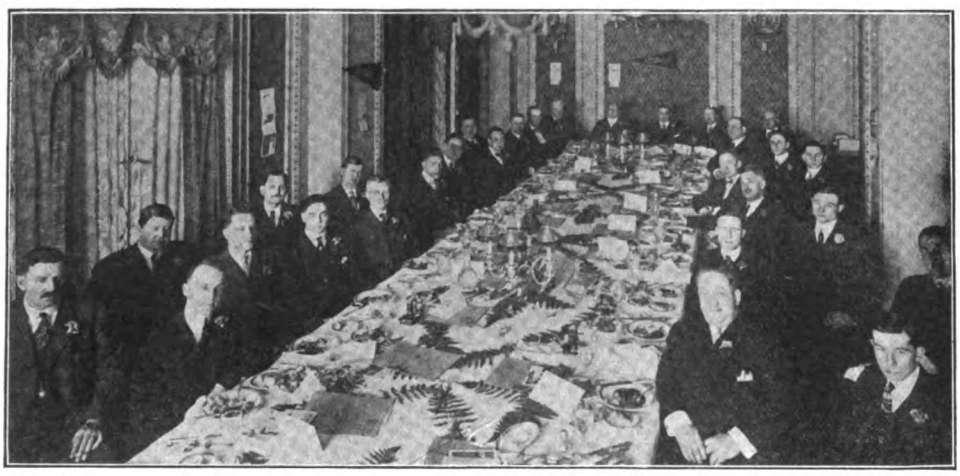
The Dyneto Company, Syracuse, N. Y., has developed an electric lighting and starting system for Grant cars, made by the Grant Motor Company, Findlay, O. It weighs 30 pounds and is of the single-unit motor-generator type, self-regulating by an ingenious arrangement of the windings.

The Lozier Motor Company, Detroit, held its first annual convention recently. More than 50 service men from the establishments of Lozier dealers throughout the country were the company's guests. The service men inspected the factory, tore down and rebuilt the 1914 models and listened to talks by the factory representatives of concerns supplying the Lozier accessories.

The Oakland Motor Car Company, Pontiac, Mich., exceeded all records for a single day recently when the total orders amounted to three train loads of machines. Two train loads were shipped to Omaha and 10 cars of automobiles to Georgia.

The Central Welding & Manufacturing Company, St. Louis, Mo., manufactures a new generator for automobiles, etc. The company is located at 2211 Olive street.

The Spenny Motor Car Company, Holland, Mich., has opened general offices in the Otis building, Detroit, and is



Recent Dinner Tendered to State Dealers and Sub-Dealers by Commerce Motor Car Company of Illinois.

now closing with dealers and agents in various parts of the country who will handle the company's two models. These consist of a four, which sells for $750, and a six, that sells for $3750.

The Purfex Manufacturing Company, Philadelphia, announces the discontinuance of the New York office. The products of this company are marketed under the names of Purfex valve grinding compound, Purfex carbon tablets and the Pillner valve compressing spring tool.

The Federal Motor Truck Company, Detroit, gave an elaborate banquet to its visiting dealers recently. At the close of the dinner the National Federal Dealer's Association was organized to bring the dealers closer together, foster the spirit of co-operation and to improve service to truck owners. The following officers were elected: President, Allan Baker; vice president, William M. Hughson; secretary and treasurer, H. S. Dunlavey; assistant sales manager, C. T. Chenevert, with headquarters in New York City.

The Hendee Manufacturing Company, Springfield, Mass., maker of Indian motorcycles, has had a most prosperous year, with an output of 35,000 mounts from which net earnings of $1,300,000 resulted. The plant has been enlarged with a view of turning out 50,000 of these machines during 1914. Deliveries to date have been 100 per cent. greater than a year ago.

The Kosmath Company, Detroit, has purchased from the receiver of the Miller Car Company the designs and material which the latter had on hand for the 1000 delivery wagons which it was building at the time of the failure. The manufacture of these wagons will be continued by the Kosmath Company.

The Tire Repair Equipment Company, Appleton, Wis., has purchased the stock, machinery, patents and business of the Meili-Blumberg Company, New Holstein, Wis., manufacturing attached sliding clamp vulcanizers. The Appleton company will continue the manufacture of this device under the trade name of Badger steam vulcanizer.

The Craig Center Auto Company has opened its new factory at Pittsburg, Penn.

The Jackson Retail Products Company, Jackson, Mich., which manufactures radiators, fenders, etc., for automobiles, will establish a plant in that city.

The Drednot Motor Trucks, Ltd., Montreal, Que., maker of Drednot trucks, is to be reorganized. The new place of business will be at 143 Wellington street. Vibert S. Ross, an experienced automobile and motor truck engineer, will play an important part in the company's business affairs.

The International Harvester Corporation has just completed two large additions to the plant at Akron, O., which is devoted exclusively to motor truck manufacture.

The Rotary Air Brake Company, Anaheim, Cal., manufacturer of an air brake for motor cars, will erect a factory in Los Angeles. The company also produces engines and airmobiles.

The Beaver State Company, Portland, Ore., has purchased a tract of between five and six acres in the northwestern part of Gresham, Ore., as a site for its motor car factory. Work has commenced on the new building.

The Pierce-Speed Controller Company, Anderson, Ind., is considering the enlargment of its plant.

The Fiat Motor Car Company, Poughkeepsie, N. Y., is having its factory enlarged at a cost of $75,000.

The Brown Clutch Company, Sandusky, O., has been compelled to largely increase its manufacturing facilities. A new building of concrete and equipped with the latest machinery has been added to the plant.

W. C. Hendee Rubber Company, Torrance, Cal., is having its plant enlarged. The cost of the machinery to be installed will be $50,000.

The Commerce Motor Car Company of Illinois, the state sales branch of the Commerce Motor Car Company, Detroit, maker of Commerce business wagons, recently entertained the dealers and sub-dealers throughout that state at a dinner in the Sherman house, Chicago. The purpose of the gathering was to promote the spirit of co-operation and to discuss matters pertaining to the sale of machines in that section. Several executives of the parent company were in attendance.

The Gramm-Bernstein Motor Truck Company, Lima, O., has received plans for a new building to be erected at Seventh and C streets, Tacoma, Wash. The structure will be two stories high, 60 by 120 feet, and of the most modern construction throughout. The first floor will be used as a salesroom, with a complete service department in the rear.

The Moon Motor Car Company, St. Louis, Mo., has issued a report showing its actual gross shipments for the last five months of 1913 to have been $312,005.14, as compared with $237,478.44 for the corresponding period of 1912. According to the company, it is the lightweight six streamline which is making this gain.

The Jackson Eno Rubber Company, Los Angeles, Cal., is installing new and up-to-date machinery at its plant. The company manufactures tires.

The Abbott Motor Car Company, Detroit, has added three departments to its already large and extensive plant, body trimming, top work and painting. The building is now under construction and is to be three stories, of brick, slow burning mill construction, and will be equipped with automatic sprinkler and electric power elevator.

The Gananoque Spring & Axle Company, Gananoque, Ont., has started up the new spring works that it built to replace the old plant which was destroyed by fire last October. The new building is much larger than the old one and is fireproof, being built of stone, brick and reinforced concrete, with steel trusses. The sash is of steel, with wire glass, and the entire factory is equipped with the latest type of modern spring making machinery.

The Mais Motor Truck Company, Indianapolis, which was reorganized after being placed in the hands of a receiver July 9, 1912, recently met and paid its last obligation to Franklin Vonnegut, the receiver, and is now actively preparing for a substantial increase in output. The directors of the new organization are: H. G. Francis, W. M. Pearce, A. S. Lockard, L. A. Caswell, J. S. Sinclair.

The Pacific Tire & Supply Company, Seattle, Wash., is to erect a large factory for the manufacture of tires. The company has a capital stock of $200,000.

The Puritan Manufacturing Company, Detroit, has started a three-story addition to its plant at 435 Lafayette boulevard, the building being 75 feet by 100 feet in size.

The Keystone Vehicle Company, Columbus, O., will open within a few months a factory at North Columbus, O., for the manufacture of gasoline hearses. The concern will also do repairing on all kinds of cars.

The E. J. Thompson Company, Pittsburg, Penn., has purchased from the Nicola Land Company about 7000 square feet adjoining its present building and will erect another modern four-story building, which it expects to occupy within six months. The new structure will provide a large showroom, new offices and very large elevator, enabling the handling of large trucks, etc., and will cost $80,000. The company manufactures limousine bodies for automobiles.

The Menominee Electric Manufacturing Company, Menominee, Mich., has developed a line of lighting generators for use in connection with cyclecars and is now making shipment.

The National Forging Company, Hamilton, Ont., has taken over the plant of the Swift Motor Car Company, and will use it for the production of automobile and carriage forgings.

The American Ever Ready Company, New York City, has purchased an entire block in Long Island City, upon which will be erected an eight-story factory, 200 by 300 feet.

The V-Ray Company, Marshalltown, Ia., at its recent annual meeting, trebled its capital stock. Dwight H. Denmead acquired one-third interest in the company. Mr. Sinclair and Mr. Hansen each owning a third interest.

The Oakes Pressed Steel Company, Indianapolis, Ind., maker of metal stampings of all descriptions, has found it necessary to remove into the enlarged plant at the corner of Division street and Vandalia railroad, shown in the accompanying illustration. This action is the result of rapidly expanding business activities.

The Fisher Manufacturing Company, Lincoln, Neb., which manufactures the Rim-Grip sub-casing, a device designed to prolong the life of automobile tires, has announced its intention of erecting a second factory on the Pacific Coast. It is the purpose of the company eventually to invade the East, and locate a third plant in some centrally located city on the Atlantic seaboard.

The American Manufacturing Company, Lexington, Tenn., has taken control of the manufacture of the Partin-Palmer motor car at the plant at Ecorse, Mich., recently operated by the Partin-Palmer Car Company, Detroit.

The Dominion Motor Car Company, St. John, N. B., has leased property adjoining the Ford plant at Coldbrook, and will erect a large factory on the site for the manufacture of automobiles.

The New Haven Welding Company, New Haven, Conn., will enlarge its plant and thereby facilitate better handling of its products. The company is located at 67 Broadway.

The Golden West Motors Company, Sacramento, Cal., has the first unit of its large building completed, and the second unit will be ready in the early spring. That portion of the plant now ready for occupancy is 30x100, and the one being rushed to completion is 100x200.

McQuay & Norris, St. Louis, Mo., will soon move into its new factory, which is nearing completion. The company manufactures Leak-Proof piston rings.

The Perfex Company, Los Angeles, Cal., is now located in its new plant at Santa Fe avenue and 52nd street. The entire efforts of the company will henceforth be directed toward the production of a 1000-pound light delivery car for retail merchants. The new plant has a capacity of 30 cars a month.

The Willys-Overland Company, Toledo, O., has ordered payment by check to be made every week, instead of paying its employees twice a month, as heretofore. The National Bank of Commerce, of that city, has made arrangements to cash these checks with a special force which will be kept on hand to pay out the $125,000 of the weekly payroll. Before the new system was inaugurated the bank had to transport $250,000 in cash, guarded by heavily armed policemen, every two weeks to the Overland plant.

The F. L. Moore Truck Company, Torrance, Cal., is now working to its fullest capacity, 125 men being employed. With the new machinery that has been installed it is expected that the output of the factory will approximate close to $100,000 a month.

E. B. Gregg, New Castle, Penn., is said to have bought the plant of the Motor Car Company of that city. The property is valued at $90,000. Mr. Gregg was formerly sales manager of this company and it is understood that he intends to operate the factory in a very short time.

A. C. Barley, Chicago, has purchased the factory of the Halladay Company at Streator, Ill., and is expected to resume the manufacture of the Halladay automobiles.

C. P. Kell, San Francisco, Cal., is interested in a large factory to be erected at Oakland, Cal., for the manufacture of commercial vehicles.

The Corsair Motor Company, Detroit, of which F. V. Whyland is the engineer, has secured office headquarters at 315 Free Press building. The company produces Corsair motors, designed for the cycle and light car trade.

I. D. Rodcap, Detroit, who began in 1908 as production manager of the E-M-F Company and who for the last 2.5 years has been chief engineer, factory manager and purchasing agent of the Alpena Motor Car Company, has become production manager of the Lincoln Motor Car Company of that city.

The Croxton Motor Car Company, Washington, Penn.; has sold its stock to the Universal Motor Company, and the latter company will manufacture the Universal car.

The F. & H. Wire Wheel Company, Columbus, O., has brought out a new rim for automobile wheels adapted for the use of wire spokes. The factory is at 1432 Parsons avenue.

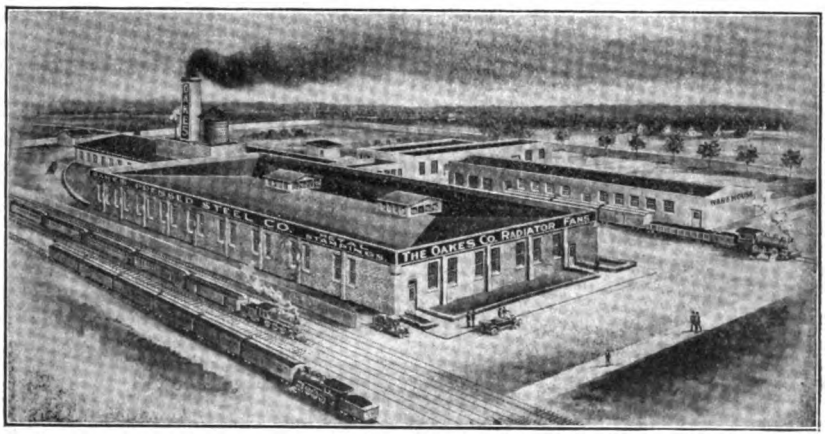
The Motor Car Spring Company, New York City, is to engage in the manufacture of screw machine products, gas savers and other parts for automobiles and motorcycles.

The Belknap Wagon Works, Grand Rapids, Mich., is preparing to increase its line by making bodies for motor trucks, these being designed and constructed to order.

Gray & Davis, Boston, Mass., has completed arrangements by which its lighting and starting outfits will be sold throughout Europe by the Allgemeine Elektricitas Gesellschafts of Berlin, Germany, commonly known as the A-E-G Company.

Hers & Co., New York City, is producing a four-cylinder magneto, intended for cyclecar use, and a very compact distributor for battery ignition systems.

The Lovell-McConnell Manufacturing Company, Newark, N. J., is offering to the cyclecar trade the Klaxet, the smallest electric horn, and the new hand-operated Klaxon.



New Plant of the Oakes Pressed Steel Company, Indianapolis, Ind.

George McCadden, St. Cloud, Minn., is organizing a company to manufacture the piston ring recently invented by him. The company will have $50,000 capital and will lease a building in Minneapolis. Mr. McCadden is proprietor of the McCadden Machine Works.

The New Process Gear Corporation, Syracuse, N. Y., is erecting a three-story, concrete and steel building, 40 by 100 feet, to provide additional facilities for spur and bevel gear work. The new building is to be absolutely fireproof, with brick curtain walls and concrete floors, and will contain entirely new equipment.

Janney, Steinmetz & Co., Philadelphia, manufacturer of the well known Jasco seamless steel, leakless gasoline tanks, is producing these tanks in sizes and shapes suitable for cyclecar productions.

The Pennsylvania Shafting Company, Westchester, Penn., will erect a new plant for the manufacture of Wright taper roller bearings for automobiles. The cost is estimated at $150,000, and will adjoin the present plant.

The Rubber Goods Supply & Manufacturing Company, Akron, O., has changed its name to the Excel Rubber Company. The company is located at 32 West State street, and produces tire accessories.

The Jeffery-Dewitt Company, Detroit, manufacturer of spark plugs, has erected a large addition to its factory No. 3 at Butler avenue and the Grand Trunk railroad. The building will be devoted to the first operation in making the porcelains for the plugs.

The Motor Products Company, Chelsea, Mich., will manufacture a V shaped two-cylinder motor for the cyclecar trade, and will shortly be shipping 50 motors daily. The American Distributing Company, Jackson, Mich., will market the output.

The Packard Motor Car Company, Detroit, has placed with the Hess-Bright Manufacturing Company its contract to cover its annular ball bearing requirements for the period of one year.

TRADE INFORMATION EXCHANGE.

The Following Requests for Information, Presented by Members of the Trade Information Exchange, Offer Opportunities for Agents to Secure New Lines, for Manufacturers to Extend Their Representation and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. They Are Published Without Name or Address, Those Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for Forwarding.

Through the Trade Information Exchange, The Accessory and Garage Journal is in a position to supply at request a number of the best pleasure car and power wagon agency propositions that can be secured. These agency openings are for machines of all kinds, makes and prices. When writing, state preference, prices and full details concerning that which is desired. All correspondence will be treated as confidential. No charge will be made for the service rendered.

PLEASURE CAR AGENCIES WANTED.

9959—North Carolina Dealer is interested in securing a good line of pleasure cars selling from $850 to $1500.

9963—Indiana Company is desirous of obtaining the agency for pleasure cars selling from $400 to $1000.

9968—Ohio Firm is in the market for pleasure cars selling up to $800.

9964—Wisconsin Firm would like to secure the agency for pleasure cars ranging in price from $550 to $2000.

9970—Washington Company is interested in securing the agency for pleasure cars selling from $500 to $1500.

9973—Connecticut House wants the agency for pleasure cars selling from $1750 to $6500.

9976—Wisconsin Dealer is in the market for a line of pleasure cars selling from $500 to $750.

9977—Michigan Company is desirous of securing the agency for pleasure cars selling between $500 and $2500.

9979—Wyoming Company is in the market for a line of pleasure cars selling from $750 to $2000.

9983—Missouri House would consider an agency proposition involving pleasure cars selling from $900 to $1500.

9986—Ohio Dealer wants to represent a first class line of pleasure cars selling from $1000 to $2000.

9989—Wisconsin Company is interested in pleasure cars selling from $350 to $3000.

9991—Texas Concern would consider an agency proposition involving pleasure cars selling from $750 to $2000.

9994—Utah House is desirous of securing a line of pleasure cars selling from $800 to $2500.

9995—Texas Company wants to represent a pleasure car selling for about $750.

9998—Alabama Firm is interested in pleasure cars selling from $1750 to $2500.

9999—Washington Dealer wants pleasure cars selling from $750 to $1000.

10,006—Wisconsin Dealer would consider an agency proposition involving pleasure cars selling from $375 to $5000.

10,010—Missouri Company is in the market to represent pleasure cars ranging in price from $500 to $1500.

10,015—Maryland Dealer wants to represent a line of pleasure cars selling from $300 to $1000.

10,019—Arkansas Concern is open for an agency proposition involving pleasure cars ranging in price from $1000 to $1600.

10,023—New Jersey Company would represent makers of pleasure cars ranging in price from $400 to $1800, particularly four and five-passenger touring cars selling around $500 or $600.

10,024—Minnesota Firm is in the market to represent a line of pleasure cars selling from $700 to $1500.

10,029—Ohio Concern is desirous of securing the agency for pleasure cars selling from $1295 to $2375.

10,035—Texas Dealer is in the market to represent a line of pleasure cars selling from $790 to $3200.

10,036—New Hampshire Firm is anxious to secure a line of pleasure cars ranging in price from $400 to $1200.

10,039—Massachusetts Dealer is in the market to represent a line of pleasure cars selling up to $1000.

10,042—Iowa Concern wants the agency for pleasure cars selling from $500 to $3000.

10,046—Kentucky House would like to take the agency for pleasure cars selling from $350 to $475.

10,049—Ohio Firm is in the market to represent a line of pleasure cars selling from $750 to $2500.

10,052—Pennsylvania Company wants to represent a good line of pleasure cars.

COMMERCIAL CAR AGENCIES WANTED.

6055—New Hampshire Company is interested in securing the agency for power wagons listing at $650 to $1000.

6059—Minnesota House wants the agency for commercial vehicles selling from $1000 to $2000.

6062—Maryland Dealer would consider an agency proposition for power wagons selling from $300 to $1500.

6063—Wisconsin House is open for an agency proposition involving power wagons selling from $500 to $1000.

6066—Kansas Dealer is interested in securing the agency for power wagons selling from $300 to $2500.

6069—Wyoming Company is open for an agency proposition involving power wagons selling from $900 to $2000.

6073—Washington Firm would consider an agency proposition for commercial vehicles ranging in price from $500 to $1500.

6077—Pennsylvania Concern wants a line of commercial vehicles.

6081—Wisconsin Dealer is interested in securing the agency for commercial vehicles selling from $1000 to $2500.

6085—North Carolina Company is in the market to represent a line of commercial vehicles selling from $500 to $1500.

6088—Indiana Dealer wants the agency for commercial vehicles selling from $400 to $1250.

6089—Ohio Company would consider an agency proposition for power wagons selling from $900 to $2000.

CYCLECAR AGENCIES WANTED.

1739—Idaho Dealer is seeking information relative to a first class line of cyclecars.

1742—Texas Concern is interested in cyclecars and wants to hear of a good line at once.

ACCESSORY AGENCIES WANTED.

7789—Virginia Dealer is in the market to represent a first class line of automobile equipment, accessories and supplies and power wagon supplies.

7792—Idaho Company wants to hear from up-to-date lines of automobile accessories and supplies.

7795—Ohio Firm wants to hear from makers of up-to-date lines of pleasure car and power wagon equipment, accessories and supplies.

7796—Indiana Dealer is in the market for power wagon and pleasure car equipment, accessories and supplies.

7799—North Carolina Company is interested in securing a line of pleasure car and power wagon equipment, accessories and supplies.

7802—Wisconsin Concern is in the field to represent an up-to-date line of pleasure car and commercial vehicle equipment, supplies and accessories.

7806—Washington Firm is desirous of securing an up-to-date line of pleasure car and commercial vehicle equipment, accessories and supplies.

7810—Connecticut House wants information relative to pleasure car equipment, accessories and supplies.

7813—Wyoming Company is interested in securing a line of automobile equipment, accessories and supplies.

PERSONAL NEWS OF THE INDUSTRY.

Owing to an unfortunate error in these columns for February, it was made to appear that W. N. Murray of Pittsburg, Penn., was connected with the Pittsburg Automobile Show Association. As a matter of fact, Mr. Murray has been, and still is, president of the Automobile Dealers' Association of Pittsburg since 1904, and has no intention of retiring or in any way severing his connection with that organization. The two bodies are distinct rivals, each holding an automobile show of its own, and Mr. Murray has never been connected with the former. The Automobile Dealers' Association of Pittsburg has a membership of some 40 dealers in that city.

W. N. Murray, President, Automobile Dealers' Association of Pittsburg.

L. F. Baechle has been appointed sales manager for the Mathiesen Spring Cushion Wheel Company, at 2332 Michigan avenue, Chicago. Mr. Baechle was formerly associated with the Goodyear Tire & Rubber Company, as factory representative in the truck tire department.

A. Ellsworth Jackson has accepted a position with the Wallmann Manufacturing Company, Milwaukee, Wis. He was formerly connected with the S. F. Bowser Company, Fort Wayne, Ind.

Moore Kelly has been appointed manager of Byrne, Kingston & Co., and the Kokomo Electric Company, Detroit. Mr. Kelly succeeds F. J. Alvin.

Victor A. Charles, manager of the New England branch of the Inter-State Company, Boston, Mass., has bought all rights of the branch company and he will conduct a motor business on his own account.

W. W. Swan, New Haven, Conn., is to act as motor truck salesman for the White Motors Company. Mr. Swan has been connected with two of the largest manufacturing companies in the country and has considerable experience in this line of business.

William C. Little, Chicago, who has for the past year been sales and advertising manager of the Borland-Grannis Company, has resigned. Mr. Little has been connected with some of the most prominent firms throughout the country. His plans for the future have not been announced as yet.

Ralph D. Webster has taken charge of the Batavia Rubber Company's branch at 1906 Broadway, New York City. Mr. Webster was formerly connected with the Eclipse Machine Company, Elmira, N. Y.

George Bell, formerly general sales manager of the Esterline Company, is now manager of the Detroit branch of the Remy Electric Company, E. P. Willett, former manager, having resigned to assume a new position.

Clarence A. Pfeffer has been re-elected president of the Wolverine Automobile Club, Detroit, Mich.

F. E. Conrad of the Universal Auto Repair Shop, Reading, Penn., has been appointed manager of this firm.

James H. Reed, Los Angeles, Cal., has charge of the local branch of the Savage Tire Company.

Joseph R. Power, formerly in charge of the wholesale business of the Anderson Electric Car Company, has taken a position as district manager for the Chicago Electric Motor Car Company, with headquarters in Chicago.

L. R. Kesterson has taken a position with the Huffman Company's branch at Mitchell, S. D. Mr. Kesterson was formerly associated with the Hupmobile agency in Superior, Wis.

John V. Van Loon of the Cadillac Motor Car Company, Kalamazoo, Mich., is now manager of that company. He succeeds Louis B. Kraft, resigned.

H. J. Galvin has been appointed manager of the San Francisco branch of the Remy Electric Company, upon the retirement of P. E. Kempton. Mr. Galvin has been connected with the Remy company for several years, and is well known throughout the trade in the East.

W. S. Campbell has been appointed advertising manager of the Miller Rubber Company, Akron, O. He has had several years' experience in the advertising world, both trade paper and commercial, and was at one time circulation manager of the Iron Trade Review and Daily Iron Trade. Previous to that he was in business for himself in Canada.

W. W. Davis has been appointed manager of the Poore Bros. Automobile Company of San Francisco, Cal., which distributes Jackson cars.

H. C. Bulask is manager of the recently incorporated California Cyclecar Sales Company, San Francisco, Cal. This company handles the Greyhound cyclecar business in that city and surrounding districts.

M. C. Rumely, who entered the service of the M. Rumely Company, La Porte, Ind., 30 years ago, and who during that time has been connected with nearly every department of the company, has resigned. After a brief rest he will enter into business on his own account.

J. A. Dugan has been appointed to the position of vice president and sales manager of the Standard Auto Company, Louisville, Ky. The company is the agency for the Cole, Reo and Regal gasoline cars, and also the Woods electric.

George Uihleim of Milwaukee, Wis., has established headquarters at Detroit, and will personally take charge of the management of the Universal Motor Truck Company in Detroit. G. L. Brush, formerly assistant secretary, has resigned.

A. L. Danford, Boston, Mass., is now manager of the Boston agency for the Cadillac cars. He succeeds Mr. Measure, who is in ill health.

R. McA. Lloyd, New York City, is now in charge of the Fisher Motor Corporation. He was one time connected with the General Vehicle Company and later with the International Motor Company.

Gus A. Boyer has joined the John F. McLain Company of San Francisco, Cal. The company handles the Franklin cars, and Mr. Boyer is thoroughly acquainted with the line, having sold the Franklin on the Coast several years ago.

C. Q. Vaughn has been promoted to the Toledo branch of the United States Tire Company, Toledo, in the capacity of manager. Previously he was a travelling representative in the district.

H. M. Leonard, Carthage, O., has been appointed general superintendent of the Crescent Motor Company of that city. Mr. Leonard was at one time factory manager of the Jackson Automobile Company at Jackson, Mich.

Homer N. Kerr, New York City, has been appointed sales manager of the Convertible Body Corporation of that city. He was formerly associated with the Ford company.

W. T. Waterman has succeeded Frank W. Skinner of the Zip Cyclecar Company, Davenport, Ia., the latter having severed all connections with the concern.

H. R. Swartz, New York City, has succeeded Ray M. Owen of the Yellow Taxicab Company of that city. Mr. Swartz was formerly the company's vice president.

Otis R. Cook has been appointed general sales manager of the Kelly-Springfield Tire Company, New York City, and will make his headquarters in Cleveland, O. Mr. Cook was engaged with the B. F. Goodrich Company, Akron, O., for over 10 years as general representative. He also has been connected with the Firestone Tire & Rubber Company and the Federal Rubber Manufacturing Company.

A. B. Henley of the Henley-Kimball Company, Boston agent for the Hudson cars, has been taking a short vacation at Washington, D. C., to prepare for the rush of the show and the spring selling season.

R. H. Johnston, President, Automobile Dealers' Association, New York City.

R. H. Johnston, manager of the White Company's branch in New York City, has been elected president of the Automobile Dealers' Association, Inc., in that city. The other officers are: Vice president, Charles H. Larson, representing the Oldsmobile agency; secretary and treasurer, Frank Eveland, Stevens-Duryea; general manager, Charles A. Stewart.

Digitized by Google

George H. Strout, who resigned as district sales manager of the Cole Motor Car Company, Indianapolis, Ind., to become general sales manager of the Haynes Automobile Company, Kokomo, Ind., about a year ago, has resigned from the latter position, the work for which he was engaged having been completed. His future plans have not been announced as yet.

George H. Strout, Well Known Sales Executive.

Thomas E. Gallagher was elected president of the Western Automobile Conference at the annual meeting held some time ago. Fred J. Sauter was elected secretary and treasurer. The meeting was held at Chicago.

D. McCall White, A. M. I., mechanical engineer, M. I. A. E., formerly of the designing department of the Daimler Motor Company, England, has resigned his position as works manager of the Crossley Motor Company, Manchester, and sailed for the United States. Any communications will reach him addressed, care of the Society of Automobile Engineers, 1790 Broadway, New York City.

F. W. Drecktrade resigned as vice president of the Holt-Chandler Company, metropolitan representative of the Maxwell, at a meeting of the board of directors held recently. Mr. Drecktrade took this action because his recently acquired interest in the Junction Motor Company of Jersey City, N. J., will now require his whole attention.

Harry Goodman, a pioneer in the automobile field, who has of late been interested in electric vehicles, is to have charge of a branch of the Springfield Metal Body Company, Springfield, Mass., which is to be established in New York City.

Lloyd Hombeck has opened an office at 301 Kasota building, Minneapolis, as a manufacturers' agent, and is desirous of securing a line of ignition apparatus and automobile accessories.

Henry Souther, well known throughout the industry as a consulting engineer, has become identified with the Ferro Machine & Foundry Company, Cleveland, O., and has been elected vice president. Mr. Souther formerly was consulting engineer for the Association of Licensed Automobile Manufacturers during the life of that organization, and was president of the Society of Automobile Engineers during 1911.

Henry Souther, Vice President, Ferro Machine & Foundry Company.

A. R. Demory, vice president and general manager of the Timken-Detroit Axle Company, Detroit, has been elected on the directorate of the National Bank of Commerce of that city.

O. P. Bernhart has taken a position with the Auto Crankshaft Company, Detroit. He was formerly associated with Atlas Manufacturing Company.

Fred K. Parke has resigned as general manager of the Universal Motor Truck Company, Detroit, in order to devote his entire time to his private business affairs.

F. H. Patterson has been appointed manager of the Olympic Motor Car Company, Seattle, Wash. The company is distributor for the Chalmers, Peerless and Selden cars.

Charles MacIlroy has been appointed local manager for the Lee Tire Sales Company, 282 Halsey street, Newark, N. J.

E. Q. Cordner, one of the veterans of the industry, has been appointed manager of the Chicago branch of the American Voiturette Company. He will direct the sale of Car-Nation and Keeton cars in that territory.

Charles R. Hatfield, Elmira, N. Y., formerly connected with the Hatfield Motor Truck Company, has invented a new carburetor for automobiles, and a Buffalo firm has taken over the manufacture of the invention.

W. J. Mead, Chicago, is now head of the Chevrolet Motor Company. He was formerly general manager of the Olds Motor Works, Lansing, Mich.

James Mundie, Des Moines, Ia., is now engaged in the battery department of the Bernard & Auto Company, 413 12th street. Mr. Mundie severed his connection with the Electric Storage Battery Company, Philadelphia, to assume his new duties with this concern.

H. E. Williams, Detroit, is in Nashville, Tenn., looking over the field with a view to establishing a factory for the manufacture of motorcycles.

S. F. Patchen, Cleveland, O., is the new branch manager of the Standard Manufacturing Company, succeeding Don Craft, who recently resigned.

R. D. Whitney, Boston, Mass., has joined the Lawrence-Stanley Company of the same address. The company handles the Mitchell cars and Mr. Whitney will travel through the New England territory.

R. J. Schmunk, who joined the selling force of the Peerless Motor Car Company, Cleveland, O., seven years ago, and has received a number of promotions since that time, has recently been made general sales manager, the chief executive of the selling division of the company.

R. J. Schmunk, General Sales Manager, Peerless Motor Car Company.

E. R. Perkins, New York City, has succeeded Theodore Reynolds as president of the Overman Tire Company.

C. B. Whittlesey, Hartford, Conn., who is manager of the Hartford Rubber Works Company, has been elected president of the Hartford Chamber of Commerce.

Preston T. Miller, Springfield, Mass., has been appointed manager of the branch of the General Vehicle Company at 327 Main street.

C. W. Richards has been appointed superintendent of production of the Driggs-Seabury Corporation, Sharon, Penn. He was previously, connected with the Stevens-Duryea Company, Chicopee Falls, Mass.

Al Spear, Portland, Me., has resigned from the Spear Auto Company. He has sold his interest to L. A. Peterson, one of his associates in the company.

C. H. Clark, Springfield, O., has accepted a position with the Robbins & Myer Company, manufacturer of motors and electrical supplies, of that city. Mr. Clark was formerly connected with the Goulds Manufacturing Company, Seneca Falls, N. Y.

A. J. Dudley, Schlesingerville, Wis., has joined the staff of the Standard Machinery Company in that city. He will assist in the engineering department and also act as general sales and travelling representative. He was formerly connected with the Kissel Motor Car Company, Hartford, Wis.

Leon Spilo, New York City, formerly manager of the used car department of the Mercedes Distributing & Importing Company, is now manager for E. Anderson, 1876 Broadway.

President John A. Wilson of the A. A. A. has gone to Europe and during his absence the affairs of the organization will be directed by Dr. H. M. Rowe of the Automobile Club of Maryland. Mr. Rowe will attempt to secure his portion of the 100,000 members which is desired by President Wilson before the end of the year.

Joseph R. Deake, vice president of the Hupp Motor Car Company, Detroit, is making a second tour of the world in his Hupmobile. Mr. Deake is not attempting to make a speed record on this trip. His route is from England to France, thence along the Mediterranean into

Digitized by Google

Egypt and Arabia, to India, from Bombay to Calcutta, Ceylon and Australia, to Japan and China, to New Zealand and then to San Francisco, which will complete the tour.

Louis Mansbach, treasurer of the Times Square Automobile Company, New York City, returned from Europe recently. He established a number of branches for the company in Germany and England. Mr. Mansbach reports excellent business in Europe for American cars and supplies.

Edward Green of the Maxwell Motor Company, Detroit, has sailed for Europe in the interests of the company. His work will be in connection with the development of the foreign distribution of Maxwell cars, which are enjoying a constantly increasing export market.

R. A. Rothermel has been engaged by the Continental Motor Manufacturing Company, Detroit, as its foreign representative, with offices in Paris. The company intends to compete with foreign motor makers in their home territory.

H. D. Van Brunt, New York City, has become export agent for the Palmer-Moore Company, Syracuse, N. Y., and will handle the entire exports of the Palmer-Moore two-cycle air and water-cooled trucks in foreign countries, excepting Canada.

J. T. Rose has joined the Wolverine Lubricants Company, with headquarters at Detroit.

L. P. Prossen, for four years mechanical superintendent of the Yellow Taxicab Company of New York City, and more recently manager of the service department of the Lozier Motor Company, is engaged in the development of a new taxicab design.

Bruce Daniels has been appointed advertising manager of the Stutz Motor Car Company, Indianapolis. He will also become assistant to W. D. Myers, who is sales manager. Mr. Daniels served in a like capacity with the Motor Car Manufacturing Company, Indianapolis, for years.

Arthur Waterman, Vice President, Hartford Suspension Company.

Arthur Waterman has become vice president and general manager of the Hartford Suspension Company, Jersey City, N. J. Mr. Waterman was formerly connected with the G. C. Vaporizer Company, New York City. He succeeds Alfred Reeves, who was elected manager of the Automobile Chamber of Commerce.

J. W. Hunsiker has taken charge of the Luverne Automobile Sales Company at Minneapolis, Minn.

F. E. Lamb has joined the selling staff of the Ideal Auto Company, Fort Wayne, Ind. He will act as sales manager. Mr. Lamb was formerly sales manager of the Gramm Motor Car Company, Lima, O.

F. R. Humpage has been elected treasurer of the International Chemical Company, Bridgeburg, Ont., Canada. Mr. Humpage was one time president of the E. R. Thomas Motor Car Company of Buffalo, N. Y.

D. J. Ligon, Atlanta, Ga., has been appointed district manager of the Detroit-Wyandotte Motor Company, Wyandotte, Mich. He was previously associated with the Maxwell Company, the U. S. Motors Company, the Grabowsky Company and the Chalmers Motor Company.

James App has joined the forces of the La Vigne Cyclecar Company, Detroit. He will act as purchasing agent for the company. Previously he was assistant manager of the Cartercar Company, Pontiac, Mich.

L. B. Busby has become chief engineer of the Duplex Engine Governor Company, New York City. He is now on a western trip making test installations of the governor at various manufacturing plants.

W. L. Keuther is now a Studebaker salesman, covering portions of South Dakota, Nebraska and Iowa, with headquarters in Sioux City. He was formerly connected with the Rambler Motor Car Company.

Wallace Hood has resigned as sales manager of the Empire Automobile Company, Indianapolis, and has returned to his home in Detroit. He intends to affiliate with a Detroit company.

Earl Bessom has joined the forces of Wheeler & Schebler, Indianapolis. He will be a representative of the company in the sale of Schebler carburetors and is well known in the carburetor field.

Charles White has been appointed manager of the Stromberg Motor Devices Company, Chicago, at Detroit.

Alfred Reeves, a vice president of the Hartford Suspension Company, Jersey City, N. J., has severed his connection with that company to become general manager of the National Automobile Chamber of Commerce, succeeding Samuel A. Miles, who has held this position with this organization, and its predecessor, the National Association of Automobile Manufacturers, practically since the inception of the industry. Mr. Miles will still continue to act as manager of the national shows in New York and Chicago, although he will be free to devote a larger proportion of his time to private interests. Mr. Reeves formerly was general manager of the American Motor Car Manufacturers' Association and of the Association of Licensed Automobile Manufacturers.

Samuel A. Miles, Retiring General Manager, National Automobile Chamber of Commerce.

A. A. Bischoff, formerly advertising manager of the Catalogue Systems Company, Chicago, has resigned to engage in the automobile accessory business, under the firm name of the Consumers Auto Supply Company, locating at 123 West Madison street.

O. P. Wilson has accepted the position of assistant general manager of the Norma Company of America, New York City, manufacturer and importer of ball and roller bearings, etc. Mr. Wilson was formerly connected with the Westinghouse Electric & Manufacturing Company, Pittsburg, Penn.

J. F. Walch has become local manager of the local factory branch of the Oakland Motor Company, Kansas City, Mo. Mr. Walch has been district manager of the company, working out of the factory.

Scott Brown, who has been following the interests of the Studebaker Company, Detroit, has resigned. He had been connected with this company for the past 10 years.

H. M. Burns has become associated with the sales force of the Johnson Motor Car Company, Atlanta, Ga. He has had wide experience with the Stevens-Duryea and Chevrolet cars.

Fred Merz has been elected president of the Indianapolis Cyclecar Club. Mr. Merz is also president of the Merz Cyclecar Company of Indianapolis.

George H. Conner has become assistant manager of the W. L. Russell Company, Boston, Mass.

Burleigh N. Crockett has joined the E. Z. Rim Company, 146 Summer street, Boston, Mass.

Charles W. Flenard is now associated with the Century Auto Supply Company, 520 North Broad street, Philadelphia, as manager of the accessory department. He was formerly connected with the Gibney Motor Supply Company.

R. G. Hunter has become associated with the John Deere Plow Company, Portland, Ore., agent for the Velie pleasure cars and trucks.

Alfred Reeves, General Manager, National Automobile Chamber of Commerce.

D. A. Shaw was elected president and treasurer of the Grant Motor Company, Findlay, O., at its annual meeting held recently.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

THE 1914 SHOW SEASON.

The situation at the conclusion of the Boston automobile show of 1914 is in marked contrast with that existing a year ago. Dealers and manufacturers cannot help but recognize the possibilities that have presented themselves in every section of the country during the show season, which virtually came to an end with the big New England display.

Beginning with the splendid success achieved, particularly in the matters of attendance and retail sales, by the New York exhibition early in January, it almost has seemed that the people of every centre in which automobile shows have been held were vying with each other in an attempt to establish new records in these respects. And as has been pointed out previously in these columns, the public does not display such enthusiasm unless it is interested in the products on exhibition. There is little disposition this year to question the merits of the annual show; quite contrary to the sentiment which prevailed in many quarters at this time in 1913.

It will not prove amiss, in this connection, to call special attention to the situation in New England, as reflected by the Boston show. Upon the face of the returns it appears that not only was the number of makes of cars on display the largest of the season, either in this country or abroad, but new records for attendance and sales were again established, indicating that New England has lost none of its supremacy as the greatest motor vehicle market in the world.

WATCH THE BUSINESS.

Now that the industry is in a position to judge of the possibilities for business during the 1914 selling season, those in the trade do well to emulate the example set by many dealers in the larger cities in preparing to secure the business which rightfully belongs to them, and under such conditions as to realize proper returns on the investment. The entire industry has been, and still is, undergoing a period of readjustment, and only those dealers who adopt systematic methods can hope to maintain their position.

Conditions vary with the territory served. What one dealer in one city may be able to undertake without loss may not be attempted by another dealer in another city. A man must study his local market and plan accordingly.

The adoption of a system does not involve the selection of something complicated or partaking of the nature of red tape. It should be simple and effective, yet sufficiently comprehensive to afford every information as to the state of the business at all times. The dealer should know, absolutely, whether or not he is making money, and he must be possessed of the essential facts if he is to keep abreast of the times.

CONSIDERING MOTOR TRUCKS.

While it is conceded that different methods must be applied in the sale of motor trucks and passenger cars, there is every reason why the dealer or garageman who is already established should add a line of business vehicles, particularly in the smaller cities and towns. This undoubtedly will necessitate acquiring the services of a salesman well versed in this branch of the industry, but this is only one of the factors.

The business man who is desirous of replacing his present horse drawn equipment with mechanical transports, must be assured of uninterrupted service, and this can be done by the garage proprietor who is properly equipped to handle such work. There is a certain amount of overhead that must be charged against the sale of machines in any event, and this cannot be increased greatly by the dealer who is already engaged in the sale of passenger cars. The returns are such and the possibilities are so unlimited that the subject is worthy of every consideration by men who are in a position to give the additional line the attention it deserves.

FINANCIAL NEWS AND MARKET QUOTATIONS.

According to authoritative sources of information in financial circles, the closing days of February were the best of the entire month, showing a distinct improvement in the stock market sentiment and substantial recovery from declines that had been persistent and general. As a result, March, the first of the spring months, entered with an encouraging degree of enthusiasm and with a disposition, not out of line with the spirit of the spring season, to look for better things ahead.

The European financial situation also showed distinct improvement. Money and discounts at the British centre disclosed an easier tendency. Banking authorities in London are expecting a renewal of easy conditions in the discount market toward the close of the present month, the period of such ease, in their opinion, to be quite protracted. This, they argue, will result in further advances in high grade investment securities. The money centres of the world are so closely interwoven at the present time that it is held that any such improvement in the London situation could hardly take place without measurable response from the security markets in this country.

In domestic financial circles it is held that there is nothing in sight to suggest that local money conditions are to develop strain—at any rate before the crop demands for funds become insistent in the late summer and early autumn. The improvement in trade and industry must necessarily be gradual, it is maintained, and there are already some signs of the beginning of such movement.

APPLICATIONS FOR NEW CAPITAL.

American railroad and industrial corporations did more extensive financing during February than for some time, although the total involved was somewhat below that for the same month in 1913, which was unusually heavy. Large sums were employed both years in paying off maturing obligations, and also to refund various issues.

The total amount of new securities authorized by the directors of various corporations during the month involved $218,881,700, an increase of $10,997,700 over the corresponding month in 1913. Authorizations for the first two months of 1914 showed a decline of $87,592,500, indicating a decided upward tendency in this field during February.

EXPORTS IN JANUARY.

The monthly report of the government concerning the shipment of automobiles abroad during January, 1914, shows only a slight gain in valuation over the corresponding month in 1913. In number of cars, however, there was a decided gain. During January, 1913, 87 commercial vehicles, valued at $182,271, and 2070 passenger cars, valued at $2,051,806, were shipped abroad, as compared with 45 commercial vehicles valued at $74,591, and 2481 passenger cars, valued at $2,174,392, in January, 1914. The number and value of cars shipped abroad to the various countries during this month, both years, are given below:

	1913		1914	
	No.	Value	No.	Value
France	73	$59,245	63	$47,506
Germany	27	42,659	94	56,483
Italy	20	35,660	64	33,763

Other countries	92	103,118	151	214,668
Totals	2157	$2,234,077	2526	$2,248,883

GENERAL MOTORS STOCKS.

In connection with the automobile securities market for the past month, it is of particular interest to note the rapid rise in General Motors common since the beginning of the year. At the close of 1913 this was quoted around 36, while during the second week in March it had risen to 78½. The preferred also increased in value from 73 to 92½ during the same period.

Recently the company made application to the listing committee of the New York Stock Exchange for the listing of aditional voting trust certificates representing $714,000 par value of common, issued since the last application in 1911, and $583,000 preferred, issued since that application. In addition, the company applies for permission to list from time to time $3,374,200 of common and $3,036,900 of preferred, both of which are held at present in the treasury, on notice from the company that disposal has been made of the stock.

BRAZILIAN RUBBER VALORIZATION.

Advices from Rio Janeiro, Brazil, state that the budget voted at the end of January made no provision for the continuance of the rubber defence scheme. An immense amount of money is said to have been expended in a rubber exhibition, and in the establishment of luxuriously furnished offices for a small army of officials appointed to the new department. These officials have now been dismissed, the offices closed, the furniture placed in a warehouse, and the growers of rubber are apparently to receive no further assistance from the government in an effort to maintain prices.

PRICE OF GASOLINE.

Two reductions in the price of gasoline have been announced during the past month, the first going into effect Feb. 24, and the second during the second week in March. As a result, gasoline is now quoted in the East at 15 cents in 50-gallon lots or more

In explanation of the two reductions made recently, it is stated that they were made possible because of the severity of the winter, which not only affected automobile traffic in the country, but in the large cities, and to the increase in production, particularly in Oklahoma and surrounding territory, where several new refineries are said to have been opened.

CRUDE OIL PRICES.

The prices of crude petroleum at the wells during the middle of the month of March were as follows:

Pennsylvania dark	$2.50	Ragland	$ .70
Second sand	2.50	Illinois above 30°	1.45
Tiona	2.50	Illinois below 30°	1.45
Mercer black	2.00	Kan. & Okla.	1.05
Cabell	2.07	Corsicana light	1.05

QUOTATIONS ON AUTOMOBILE SECURITIES.

The condition of the stock market, as applying to automobile securities during the past month, is indicated by the tabulation below, which shows the high marks reached by the several stocks listed each week, and in comparison with the conditions existing at the same time last year. It will be noted that for the most part the market has been fairly steady, although there was a marked drop in Goodyear securities following the sale of $2,000,000 preferred and $2,000,000 common. In most instances, where comparison is made with the prices prevailing in 1913, it will be found that the market today shows a satisfactory situation.

PRICE SITUATION IN GENERAL MATERIAL MARKET.

The tabulation below presents the high and low prices for commodities listed for each week during the past month, as well as the prevailing prices at the beginning and ending of that period, for purposes of comparison. For the most part, the market has been steady, the most notable exception being the price of rubber, although the closing on March 14 was such as to indicate a gradual upward tendency in this commodity.

NEW CONCERNS RECENTLY INCORPORATED.

MANUFACTURING COMPANIES.

Whitwood Corporation, Weedsport, N. Y.; $25,000; to manufacture motor trucks; C. E. Whitman, C. S. Caywood, T. M. Osborne, Jay F. Woodworth.

Fancher Nu-Lock Company, Abbottsford, Wis.; $25,000; to manufacture devices for securing nuts, etc.; R. Prentice, A. A. Fancher, M. Ellingson, George Black, Paul Benzmann.

Electromobile Company, St. Louis, Mo.; $100,000; to manufacture trucks; S. J. Bernheimer, R. Kalish.

Pneuma Tubes, Ltd., Toronto, Can.; $1,000,000; to manufacture and deal in tires, tubes, etc.

Gillson Motor Company, Chicago, Ill.; $15,000; to manufacture and deal in motors; J. C. Fruit, E. D. Tillson, D. R. Hettelseter.

Automobile Fender Safety Lamp Company, Cornish, N. Y.; $10,000; to manufacture a patent lamp for automobile fenders.

Pete Reidenbach Wagon Works, New York City; $10,000; to build automobile bodies; Margaretha Reidenbach, Susanna Reidenbach, G. C. Reidenbach.

Britain Rubberized Fabric Company, Brooklyn, N. Y.; $25,000; William Schnor and others.

Modern Wheel Company, New Orleans, La.; $25,000; to manufacture a new style wheel; S. P. Walmsley and others.

Auto Cycle Company, New Orleans, La.; $100,000; to manufacture cyclecars; Arthur B. Lacour, W. J. Hormer, George E. Dicks.

Westinghouse Gear & Dynamometer Company, East Pittsburg, Penn.; $1,500,000; to issue licenses to manufacture and sell Westinghouse-Melville Macalpine gears; George Westinghouse, H. T. Herr, T. S. Grubbs, George F. White.

Cycle Car Company, New Orleans, La.; $7500; to manufacture cyclecars; Julius C. Werner, Isaac T. Rheu, Jr., William S. Campbell.

Royal Electric Heater Company, Chicago, Ill.; $10,000; to manufacture electric heaters and appliances.

Capital City Manufacturing Company, Columbus, O.; $10,000; to manufacture polishes; G. B. O'Hara, E. G. Bowerman, G. T. Carrier, C. Goshen, O. E. Davis.

Crucible Steel Casting Company, Bayonne, N. J.; $25,000; to manufacture iron, steel, manganese, copper and other materials; J. B. R. Smith, P. S. Brower, J. B. Reilly.

Mitchell Wagon Company, Racine, Wis.; $500,000; to manufacture wagons and motor car bodies; M. J. Knobloch, J. B. Simmons, J. B. Rowlands, G. N. Fratt, Raymond Weins.

Pacific Tire & Supply Company, Seattle, Wash.; $700,000; to manufacture automobile tires; B. L. Gates, Austin E. Griffiths, A. K. Allen.

Fox Chain Company, Hamilton, Ont.; $200,000; to manufacture tire chains; Thomas Crosthwait, L. H. Gray and others.

Continental Engineering Company, Augusta, Me.; $1,000,000; to deal in motors; E. M. Leavitt and others.

Costa Piston Ring Corporation, New York City; $10,000; to manufacture engine parts; Clarence G. Campbell, William R. Baird, Stephen S. Newton.

Motor Engineering Company, San Antonio, Tex.; to manufacture motor specialties; C. S. Goby and others.

C. A. Coey Motor Company, Chicago, Ill.; $50,000; to manufacture automobiles and accessories; C. A. Coey, H. L. Wells, H. H. Morgan.

Eastman Spring Company, Portland, Me.; $500,000; to manufacture and deal in motor vehicle springs, etc.; E. V. Noble, E. V. Mann.

Osgood Automobile Deflector Company, Chicago, Ill.; $50,000; to manufacture automobile accessories; S. W. Osgood, W. C. Kenner, J. J. Sheridan.

Keller Cyclecar Corporation, Wilmington, Del.; $250,000; to manufacture cyclecars, motor trucks, airships, etc.; H. E. Latter, W. J. Maloney, O. J. Reichard.

Burgess Company, Marblehead, Mass.; $100,000; to manufacture aeroplanes, boats, motors, etc.; W. Starling Burgess, Greeley S. Curtis, F. H. Russell.

Brown & Robb Company, Gloucester City, N. J.; $100,000; to manufacture automobiles; E. L. Brown, T. H. Robb, Herman Johnson.

Elastro Company, Syracuse, N. Y.; $30,000; to manufacture and deal in compounds for use on tires.

Strite Tractor Company, Minneapolis, Minn.; $100,000; to build light weight tractors; George T. Strite, Howard J. Bierman, J. S. Clapper, Frank J. Bierman.

American Electrical Company, Portland, Me.; $1,500,000; to manufacture and deal in electrical and mechanical devices of all kinds, also automobiles and parts.

The Dodge Motor Car Company, Detroit, Mich.; $1,000,000; to manufacture two-passenger light cars.

Texas Climatic Manufacturing Association, San Antonio, Tex.; $200,000; to manufacture what will be known as the "Climatic home-grown tires".

Lubricator Company, New York City; $100,000; to manufacture lubricators for automobile engines; L. R. Balck, David C. Thomas, William C. Ottiwell.

Petty Dirigible Auto Headlight Company, Salt Lake City, Utah; to manufacture headlights.

Universal Lubricants Company, Wilmington, Del.; $100,000; to manufacture automobile supplies; J. F. Curtin, C. E. Eaton, J. M. Satterfield.

Gay-Streibich Auto Wheel Company, Little Rock, Ark.; $125,000; to manufacture a patented automobile wheel.

Willys-Overland Company, Hamilton, Ont.; $500,000; to manufacture automobiles; J. N. Willys and others.

The Alschwager-Rogers Company, Minneapolis, Minn.; $50,000; to manufacture automobile bodies and wheels. J. F. Alschwager, H. H. Alschwager, J. W. Rogers.

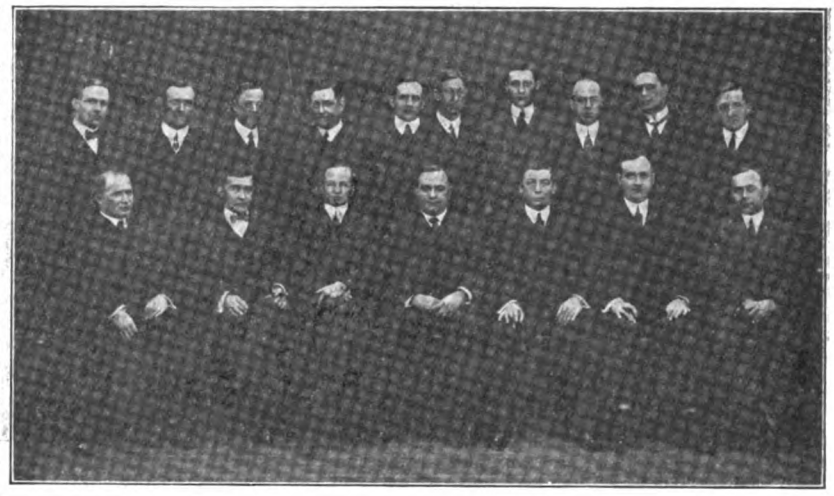
Merchants' Motor Truck Manufacturing Company, Chicago, Ill.; $100,000; to manufacture and deal in motor trucks, etc.; W. Schulze, J. W. Misek, C. A. Martin.

ACCESSORY AND SUPPLY HOUSES.

American Auto Tire Jobbers Company, Philadelphia, Penn.; $20,000.

Pacific Auto Spring Company, Los Angeles, Cal.; $20,000.

American Puncture Plug & Vulcanizing Company, Cincinnati, O.; $2000; to manufacture puncture proof substances; C. K. Barker, F. L. James, R. A. Mock, E. M. Hurley, F. S. Gates.



A Result of the Recent Amalgamation of Apple Electric and Splitdorf Electrical Companies' Selling Forces—Representatives of the Two Concerns in Convention at Dayton, O.

Ideal Accessory & Repair Company, Indianapolis, Ind.; $10,000; to deal in motor car accessories; A. Wolf, W. F. Clemens, P. E. Powell.

Dixie Auto Supply Company, Louisville, Ky.; $6000; to deal in accessories; A. H. Drake, Herman Jansen, J. A. Kolb, Sr.

Resilient Wheel, John J. Fahrney, Timberville, Va., assignor of one-third to John P. Burke, Harrisonville, Va.; one-sixth to John T. Helbert and one-sixth to Frank H. Driver, Timberville; No. 1,087,226. Filed Jan. 11, 1913.

Vehicle Jack, Edward W. McCarroll, Pittsburg, Penn.; No. 1,087,250. Filed July 7, 1913.

Armor for Pneumatic Tires, Charles Matson, Elizabeth, N. J., assignor of one-half to Ernest Huch and one-half to Rudolph Burkart, Aldene, N. J.; No. 1,087,312. Filed Nov. 4, 1912.

Sleigh Attachment for Motor Vehicles, Halvor E. Hoines, Lake Park, Minn.; No. 1,087,372. Filed April 7, 1913.

Lubricating Means for Two-Cycle Engine, Hermann Lemp, Lynn, Mass., assignor to General Electric Company; No. 1,087,387. Filed April 19, 1913.

Resilient Wheel, Robert A. Nicholson, Russellville, Okla., assignor of one-half to A. S. Nelson, Oklahoma, Okla.; No. 1,087,391. Filed Feb. 19, 1913.

Motorcycle Saddle, Philo G. Olds, Elyria, O.; No. 1,087,393. Filed Aug. 9, 1913.

Muffler, Otto F. Person, Erie, Penn., assignor to General Electric Company; No. 1,087,398. Filed Sept. 14, 1912.

Automobile Lock, John F. Hicks and Philip Kovsky, Philadelphia, Penn.; No. 1,087,446. Filed June 3, 1913.

Control Device for Motor Starters, Alden L. McMurtry, Sound Beach, Conn.; No. 1,087,454. Filed Jan. 31, 1912.

Compressed Air Starting Device, Malcolm P. Ryder, Springfield, Mass.; No. 1,087,465. Filed Feb. 14, 1912.

Vehicle Wheel Rim, Edwin Coupland Shaw, Akron, O., assignor, by mesne assignments, to B. F. Goodrich Company, same city; No. 1,087,467. Filed May 25, 1907.

Resilient Tire, Henry Wellstead, Evanston, Ill., assignor of one-half to M. Paul Noyes, Chicago, Ill.; No. 1,087,474. Filed Oct. 24, 1908.

Lamp Turning Mechanism, Nelson Maxfield, Malone, Tex.; No. 1,087,501. Filed Dec. 5, 1912.

Vehicle Spring, Morris A. Schuster, Oakland, Cal.; No. 1,087,512. Filed May 24, 1913.

Fender, Jokshan F. Whitmann, St. Louis, Mo.; No. 1,087,521. Filed Dec. 26, 1912.

Detachable Rim, Hugo C. Gibson, New York City, assignor to Firestone Tire & Rubber Company, Akron, O.; No. 1,087,534. Filed March 17, 1908.

Horn, Miller Reese Hutchinson, New York City, assignor to Lovell-McConnell Manufacturing Company; No. 1,087,538. Filed Dec. 7, 1909.

Four-Seated Closed Body, Harold H. Kennedy, Indianapolis, Ind., assignor to Waverley Company, same city; No. 1,087,540. Filed Aug. 12, 1912.

Combination Tail Light, License Plate and Holder, Elmer E. Poole, Boston, Mass. No. 1,087,548. Filed April 2, 1912.

Vehicle Brake, Charles Reiner, Philadelphia, Penn.; No. 1,087,553. Filed Aug. 30, 1913.

Internal Combustion Engine, Hugo J. Bachman, Denver, Col.; No. 1,087,566. Filed Jan. 28, 1913.

Demountable Rim, Joseph Augustus Anglada, New York City, assignor to Anglada Corporation; No. 1,087,628. Filed Dec. 13, 1911.

Gasoline Strainer, Liel W. Short, Boston, Mo.; No. 1,087,692. Filed June 18, 1913.

Elastic Metal Tire, Gustav Emil Dargatz, Kansas City, Mo.; No. 1,087,731. Filed Jan. 24, 1912.

Attachment for Car Roofs, Georg Frentzen, Aachen, Germany; No. 1,087,753. Filed April 10, 1913.

Timing Device, William M. Melling, Chicago, Ill.; assignor of 45-100 to Anthony Doerfler, same city; No. 1,087,803. Filed April 24, 1913.

Door for Automobiles, William G. Miner, Chatham, Va.; No. 1,087,809. Filed Dec. 4, 1911.

Motor, Joseph Leon Thivolle, Dijon, France, assignor to Constructions Industrielles Dijonnaises, same city; No. 1,087,470. Filed Aug. 13, 1912; original application July 26, 1911.

Internal Combustion Engine, Thomas P. Sitzler, Camden, N. J.; No. 1,087,841. Filed Feb. 21, 1912.

Spark Plug, Charles E. Talbert, Washington, D. C., assignor to Edwin C. Henn, Cleveland, O.; No. 1,087,897. Filed March 18, 1912.

Shock Absorber, Marshal D. Tillman, Wabash, Ind.; No. 1,087,898. Filed Aug. 30, 1911.

Radiator, Gardner E. Wheeler, New Haven, Conn., assignor to English & Mersick Company, same city; No. 1,087,899. Filed July 8, 1912.

Radiator, William Cleveland and Jacob R. Ockinga, Glenville, Neb.; No. 1,087,992. Filed Feb. 24, 1913.

Spring Wheel, William J. Luttrell, Honey Grove, Tex.; No. 1,087,960. Filed April 8, 1913.

Spring Wheel, Marius Mathiesen, San Antonio, Tex., assignor to Mathiesen Spring Cushion Wheel Company; No. 1,087,963. Filed Sept. 29, 1913.

Starting Mechanism, Hubert Meredith-Jones, New York City, assignor to Columbia Nut & Bolt Company, Bridgeport, Conn.; No. 1,087,965. Filed March 11, 1912.

Automatic Latch for Windshields, Herbert W. Fenton, Buffalo, N. Y.; No. 1,088,016. Filed Dec. 6, 1909.

Rotary Cylinder Engine, Clayton E. Frederickson, San Francisco, Cal., assignor of one-half to Grace C. Stenger, Berkeley, Cal.; No. 1,088,017. Filed Jan. 31, 1913.

Seat Support for Motorcycles, David James Johnston, Toronto, Ont., assignor to Militaire Auto Company, Cleveland, O.; No. 1,088,028. Filed Jan. 29, 1913.

Gaseous Fluid Mixer (Carburetor), Platt M. Orloff, Indianapolis, Ind.; No. 1,088,034. Filed Jan. 13, 1913.

Vibration Eliminator (Shock Absorber), William Reynolds, New York City; No. 1,088,035. Filed June 2, 1913.

Pawl and Ratchet Mechanism (in Jack), Frederick A. Strong, Bridgeport, Conn., assignor to American Chain Company, Sherrill, N. Y.; No. 1,088,043. Filed Dec. 31, 1912.

Speedometer Drive, Frank E. Watts and Donald T. Hastings, Detroit, Mich., assignors to Hupp Motor Car Company, same city; No. 1,088,048. Filed July 18, 1913.

Resilient Tire, Norbert L. Baker, Raymond P. Baker and John F. Baker, Elm Grove, W. Va., assignors of one-fourth to P. F. Forrester, Wheeling, W. Va.; No. 1,088,053. Filed Nov. 6, 1912.

Shock Absorber, William Reynolds, New York City; No. 1,088,093. Filed Oct. 11, 1912.

Electric Headlight, James M. Richardson, Highland Park, Mich.; No. 1,088,094. Filed Oct. 6, 1913.

Emergency Brake, Warren H. Innis, Jr., Sacramento, Cal.; No. 1,088,151. Filed April 10, 1913.

Detachable Tire Fastener, John D. Bowne, Jamesburg, N. J., assignor of one-half to William B. Harding, Westfield, N. J.; No. 1,088,200. Filed Feb. 1, 1913.

Carburetor, Maximilian Robert Lawrence, Manchester, England; No. 1,088,231. Filed April 16, 1913.

Brake, William F. Via, Huntington, W. Va.; No. 1,088,248. Filed Jan. 30, 1913.

Internal Combustion Motor, Julian S. Brown, Syracuse, N. Y.; No. 1,088,259. Filed June 19, 1911.

Explosive Engine, George Milne, Chicago, Ill.; No. 1,088,292. Filed Oct. 28, 1911.

Spring Equilibrator, George Lawson Robertson, Philadelphia, Penn., assignor of one-half to William C. O'Neill, same city; No. 1,088,298. Filed May 24, 1913.

Draft Anchor for Motor Vehicles, —— Maribo Chris Huff, Bowden, Alberta, Can., assignor of one-half to Roderick Thomas Washburn, same city; No. 1,088,344. Filed Dec. 18, 1912.

FIRES OF THE MONTH.

Lester Lawton, Shirley, Mass.; garage; $500; automobile, $1200.

Bert Vance, New Bedford, Mass.; garage and automobiles, $5000.

Edward Heuer, 156 West Ninth street, Erie, Penn.; cars, etc., $7000.

Wheelock Auto Garage, Fargo, N. D.; building, $40,000.

Joseph T. Swords, 205 Queen street, Germantown, Philadelphia, Penn.; garage and touring car, $3000.

Price Garage, Elizabeth, N. J.; garage caved in, partly destroying 20 automobiles, $2000.

Motor Inn Garage, Water and Chatham streets, Austin, Ia.; garage and 10 automobiles.

Twelfth Street Garage, New York City; 35 automobiles.

Fred S. Voorhees, Long Branch, N. J.; garage, $9000.

A. Leo Weil, 5931 Howe street, Pittsburg, Penn.; garage, $5000.

Oldsmobile Company, 225 West 58th street, New York City; building and contents, $15,000.

W. R. Franzen, Lake drive and Bradford avenue, Milwaukee, Wis.; garage, $5000.

Dean C. Benter, Kelley street, Pittsburg, Penn.; garage and three cars. Also $2000 worth of tires destroyed. Total loss not stated.

KisselKar Company's Branch, 1300 Hennepin avenue, Minneapolis, Minn.; building and three cars damaged.

Thomas Swan Company, Broadway and Gallop avenue, Cleveland, O.; automobile top factory damaged.

Andrew Dow, Main street, Houston, Tex.; garage, $1000.

Peerless Tire Company, 1588 Broadway, New York City; stock and fixtures.

Valvoline Oil Company, Edgewater, N. J.; plant damaged and part of contents destroyed, $300,000.

John S. Robb, Christy street, Carnegie, Penn.; garage and three cars, $20,000.

Petrolea Motor Truck Company, Petrolea, Ont., Canada; building, pleasure cars and motor trucks.

Essex Garage, Lynn, Mass.; garage and nearly 100 automobiles. Automobile loss is estimated at $100,000 and the building at $20,000.

Johnson-Gewinner, Atlanta, Ga.; automobile supply store, $150,000.

Preibe-Mathews Carriage Company, Des Moines, Ia.; factory partly destroyed.

Canfield Garage, 718 Canfield avenue, Detroit, Mich.; garage and contents, $24,000.

Ralph Burton, 1421 Jefferson avenue, Detroit, Mich.; garage and a number of automobiles.

Autocar Sales & Service Company, 200 Trenton street, Baltimore, Md.; garage and contents, $50,000.

Totten Auto Company, 1708 Third avenue, Davenport, Ia.; garage.

F. M. Fender, 330 West 63rd street, Chicago, Ill.; garage and a large number of automobiles, $50,000.

ADDS KEMCO GENERATOR.

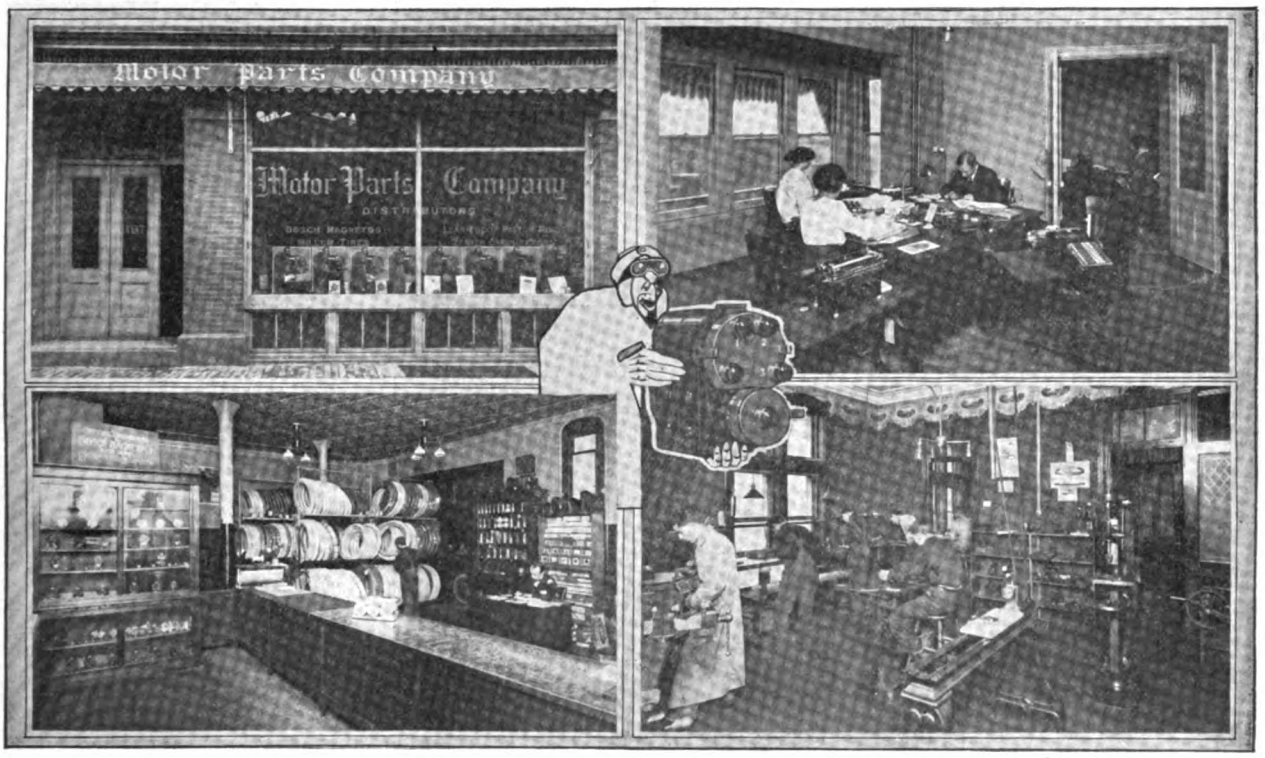
Motor Parts Company, New England Bosch Distributor, Also Handles Other Lines.

About a year ago the Motor Parts Company, which had been established in Philadelphia, entered the New England field as distributor for Bosch magnetos and plugs. Under the management of F. W. Wilkenning, the concern leased quarters at 185-187 Columbus avenue, where not only is it able to carry a large stock, but to maintain an admirably equipped laboratory in charge of expert mechanics and electricians, who are employed in overhauling work and remedying magneto troubles.

The success of this venture has been decidedly noteworthy, in that the company has been able to establish itself in a new territory in a comparatively short time. And it may be stated that the business which it has built up has warranted the addition of several well known lines, among which may be mentioned the Leak-Proof piston rings, Zenith carburetors, Mohawk non-skid tires, etc.

The most recent acquisition is the distributing agency for the Kemco fan type generator for lighting and starting systems. The company also is interested in the production of a new type of curtain fastener, which it expects to place in the market within a short time.

Within the past year the Motor Parts Company has found it necessary to locate eight supply stations in various sections of the New England territory, and has opened a well stocked branch in Springfield, Mass., at 143 Chestnut street.



Illustrating Some of the Departments of the Boston Branch of the Motor Parts Company, Distributor for Bosch Products, Leak-Proof Piston Rings, Zenith Carburetors, Mohawk Tires, Kemco Generators, Etc.

LIGHT DELIVERY CAR.

Motokart Has a Capacity of 400 Pounds and Retails for $365.

The Tarrytown Motor Car Co. Inc., with factory at Tarrytown, N. Y., and offices at 1790 Broadway, New York City, is manufacturing a light delivery car, termed the Motokart, which has many interesting features. The vehicle sells for $365 and the company has an interesting agency proposition for live dealers. The Motokart will appeal to those desiring rapid and economical delivery of merchandise.

The machine was specially designed for the work for which it is intended, and is equipped with a two-cylinder, four-cycle, water-cooled motor, rated at 12 horsepower. The wheelbase is 69 inches, adapting it to crowded traffic, and wire wheels are standard equipment. The tires are 26 by 2.5 inches, non-skid.

A friction drive is utilized, providing a multiplicity of speeds, and the springs are semi-elliptic. The body is a steel panel construction, combining durability with light weight, and the box dimensions are: Length, 50 inches; height and width, 32. This size is standard, but can be modified to suit special requirements at a slight extra cost. The capacity is 400 pounds.

ACCESSORIES, SUPPLIES AND FITTINGS.

(When Writing to Advertisers, Please Mention The Accessory and Garage Journal.)

A. A. A. FORD RADIATOR CAPS.

Sturdy Design Having Scalloped Edges and Letters.

The A. Auto Appliance Company, 114 West Exchange street, Providence, R. I., manufacturer and designer of Ford specialties, will market, after March 1, several designs of radiator caps for the model T Ford automobile. One of the qualities of the caps is that they are cast, not stampings. They are constructed of bronze and aluminum, and have scalloped edges, which not only add to the attractiveness of the design, but facilitate removal and replacement. The corrugations are made to fit the fingers, providing an excellent grip.

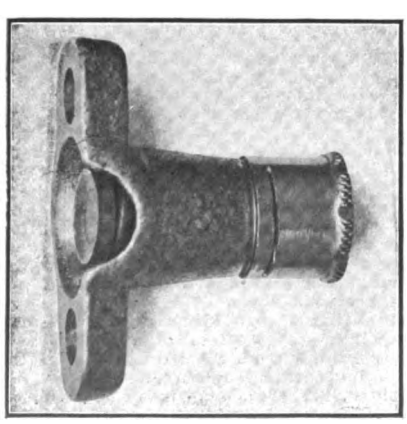
The threads are accurately cut and the maker guarantees that the caps will fit all model T Ford radiators. They are made in two styles, one a plain cap, and the other with an initial. Two finishes are supplied, a highly polished nickel and black and nickel. The A. Auto Appliance Company is prepared to manufacture radiator caps for all standard makes of cars.

DACO FORD ANTI-RATTLER.

Replaces Ball Socket Steering Gear Cap and Has Grease Cup.

The Danver Accessory Company, 18 Broadway, Pawtucket, R. I., manufacturer of Daco accessories for Ford cars, has brought out a new design of anti-rattler for the steering gear connecting rod. It differs from conventional devices marketed for taking up the lost motion in the ball and socket member, in that a grease cup is provided, making it possible to lubricate the working parts. A quality of the cup is that it locks automatically, preventing loss of the cup.

Play of the ball and socket is prevented by a coil spring, which carries a hardened steel plunger constructed to conform to the contour of the ball. This spring automatically maintains the proper tension at all times and absorbs shocks that would otherwise be communicated to the driver's hands. The maker states that adjusting means are not necessary as the plunger is hardened, and the parts subject to wear properly lubricated by the grease cup. The Daco combination anti-rattler and grease cup is constructed of high grade material, and all parts are accurately machined, insuring easy attachment to the steering gear connecting rod. It retails for $1.

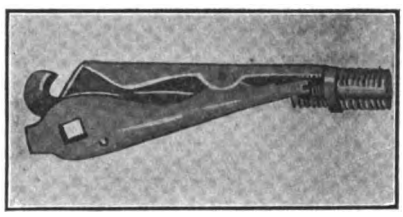


WONDER TIRE DEFLATOR.

A Five-in-One Practical Combination Pocket Tool.

The usual method of deflating an inner tube when in the casing and on the car, is to depress the valve plunger, a process that takes time. The Sprick Bros. Investment Company, Stickney, S. D., is manufacturing what is termed the Wonder tire deflator, which is a combination tool, in that it may be utilized for five different purposes.

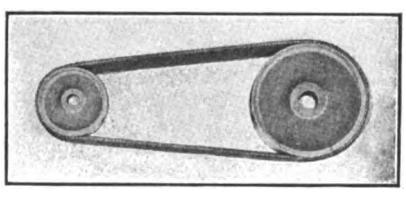
As will be noted by the accompanying illustration, one end of the tool can be clamped or snapped on the valve stem and by moving the lever toward the main body of the device the valve plunger is fully depressed, permitting the air within the inner tube to escape freely. The Wonder can be carried in the pocket and also serves as a Prest-O-Lite key, screw driver, valve plunger remover and bottle opener. It sells for 25 cents.



RUSCO FORD FAN BELT.

It Is Woven Endless and Is Uniform Throughout.

Few motorists give the fan that consideration it deserves. The majority are content if it operates at sufficient speed to keep the motor cool, and as a rule it is only when the cylinders show signs of heating that the tension of the belt is adjusted. With high speed motors, such as the model T Ford for example, it is essential that a high grade, properly adjusted fan belt be used.



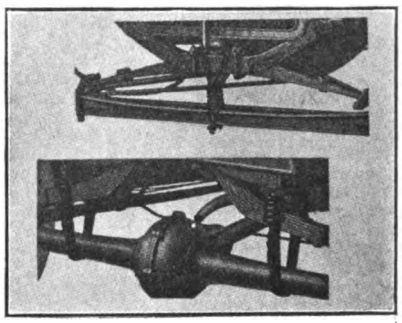
The Russell Manufacturing Company, Middletown, Conn., is producing a fan belt for the Ford car that is woven endless, and the maker states that it will not stretch and is not affected by heat, moisture, etc. It is guaranteed to be uniform throughout and to give perfect service. It retails for 30 cents and comes packed in a neat box.

The company also manufactures the Rusco brake lining, which is a high grade friction material, and made in various widths and thicknesses, also a Ford lining.

GEMCO SHOCK ABSORBER.

Ford Design Employing Coil Spring and Straps.

The Garage Equipment Company, Milwaukee, Wis., is marketing a shock absorber for the model T Ford car, which comes three to a set, two being utilized at the rear and one in front. It is claimed by the maker that the Gemco will control excessive spring action when traversing rough roads, impart easy riding qualities and prevent breaking of the springs.



Both the front and rear members comprise spiral coils, two being used with each rear absorber. The coils are secured to the frame of the car, and from them extend adjustable, heavy straps, which pass under the rear axle. The upward movement, or recoil, which is held to be the most general cause of breakage, is restricted by the coils and strap.

The absorber used in front is fitted to the axle and the cross frame member, but its position is reversed; that is, the strap is placed over the cross frame and the coil clipped to the axle.

NATIONAL REFLECTOR.

A High Grade Design for Acetylene Headlights.

The National Reflector Company, Clarksburg, W. Va., is manufacturing the National reflector, a design for acetylene headlights, and the maker lays great emphasis on its durability and efficiency. It is made of blown glass, and it is stated that the double-wall construction gives both great strength and lightness. The silvering is inside of the reflector, a construction held to prevent cracking and peeling. That sudden changes of temperature will not injure the reflector, and that it will not become discolored in service, are claims made for the design.

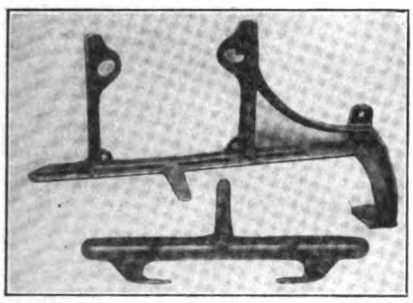
A. A. A. NUMBER HOLDERS.

Constructed for Front and Rear Plates for Ford Cars.

The securing of the license number plates so that they will conform to the laws, and so that they will not



vibrate or rattle, is more or less difficult with some types of machines. The A. Auto Appliance Company, Providence, R. I., is manufacturing two types of number plate holders for the model T Ford car, and the maker states that either can be fitted in a few minutes, and that the location of the holders is such as to comply with the automobile laws of all states.

The design for the front number plate is the smaller in the illustration, and it will be seen that it is provided with two arms or projecso spaced that the holder may be slipped over the threaded ends of the spring clips, and locked securely by the usual nuts. This makes for a rigid suspension. The number plate is bolted or secured by machine screws and nuts to the holder proper.

The larger design is for attachment to the rear spring, and it is secured in a similar manner to the front holder. Provision is also made for carrying the tail light, and a quality of the design is that the arm is sturdily constructed to withstand road shocks. The holders are made of malleable iron, and are finished in nickel or black enamel.

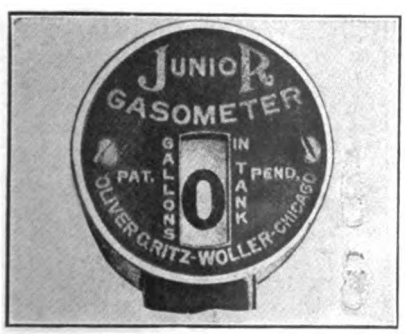
JUNIOR GASOMETER.

Dash Gauge Indicating Supply of Fuel in the Tank.

Among the numerous devices for indicating the supply of fuel in the gasoline tank is the Junior Gasometer, made by Oliver C. Ritz-Woller, 538 Clark street, Chicago, who also manufactures the Ritz Gasometer designed for large machines. The device is a compact, circular, dial like member, mounted on the dash, and the principle employed is that of a pneumatic control of the indicator.

The Junior is a smaller form, but operates on the same principle as the more expensive indicator, and the amount of fuel on hand is denoted by large figures. In the accompanying illustration zero is shown, denoting that the tank is empty, and it will be noted the figure is easily discernible.

The maker states that the Gas-



ometer will indicate every minute and correctly the amount of fuel in the container, whether the car is travelling up hill or down, over rough or smooth roads, as the operation of the device is not affected by the movement of the gasoline in the tank.

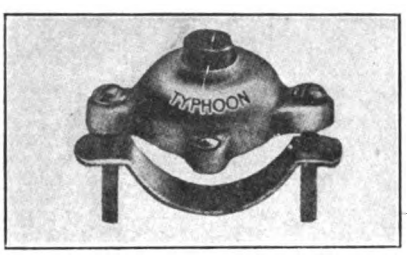
It is also claimed that a novice can install it on a car in a very short time. It is adaptable to both gravity and pressure feed systems, but when the latter is employed the price of the Gasometer is slightly increased.

TYPHOON PUSH BUTTON.

Compact Steering Wheel Fixture for Electric Horns.

A very neat and compact type of push button for operating an electric horn is the Typhoon, manufactured by the Typhoon Signal Company, Lincoln, Ill. One of the qualities of the design is that it may be attached to the steering wheel or to any flat surface, a clamp being provided for the first named installation. When attached to a flat surface, the clamp is discarded and two wood screws utilized.

The company is also marketing a steering wheel wiring fixture for electric horns. The leads are con-

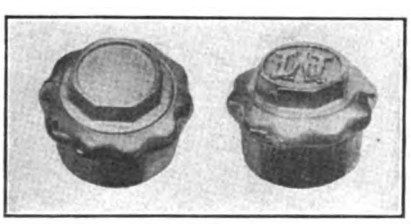


cealed, running through a tube alongside the column, with a bend on the upper end, being held by two brackets, and bringing the push button within easy reach of the driver. A flexible tube is employed at the bottom end of the fixture. It retails for 25 cents.

A. A. A. FORD HUB CAPS.

Substantially Constructed, Plain and with Initial Letters.

The A. Auto Appliance Company, 114 West Exchange street, Provi-



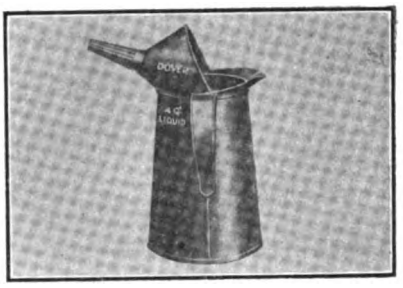
dence, R. I., maker of Ford specialties, is manufacturing several models of Ford hub caps, which are not only attractive, but are substantially constructed. They are cast in bronze, then machined to size, and the threads are accurately cut. The caps are of sufficient thickness to withstand severe service and one of the qualities emphasized by the maker is that they cannot be crushed when force is utilized to remove them if they become frozen.

The edges are scalloped and the usual hex head is provided for removing and replacing with a wrench. Each cap is nickel plated and highly polished. The A. A. A. Ford caps come plain and with initials, and their use considerably improves the appearance of the machine. The plain retails for $1 and the other designs sell for $1.25.

DOVER DUPLEX MEASURE.

Combination Funnel and Measure of Sturdy Design.

The Dover Stamping & Manufacturing Company, Cambridge, Mass., is marketing the Dover Duplex combin-



ation measure and funnel, which possesses several practical features, the most noticeable of which is a pouring lip with a centre channel. This permits of fast pouring and in quantities. The opposite side has a funnel, which points slightly upward, so that when the measure is set down all lubricant runs back into it instead of outside.

The design differs from usual Dover practise in that the handle is placed on the side, which makes for convenience when filling oil reservoirs in close quarters or cramped places. As with all Dover measures, it is of correct capacity and conforms with the laws of the various states.

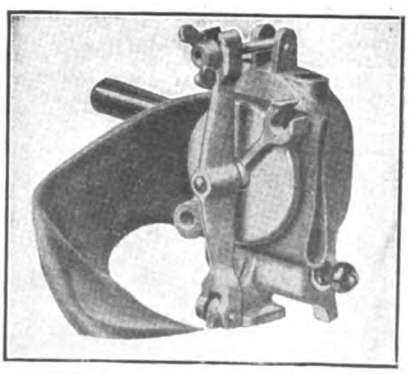
SHALER VULCANIZER.

Safety Vul-Kit Is Adaptable to Tires and Inner Tubes.

The C. A. Shaler Company, 850 Fourth street, Waupun, Wis., maker of vulcanizing equipment, has brought out the Shaler Vul-Kit vulcanizer, which is offered at a very attractive price. It is the result of considerable experimentation to develop a vulcanizer that could be carried easily in the tool box and be operated anywhere at any time, thus making it adaptable for roadside repairs.

The maker states that there is no danger of fire if the device be accidentally upset, and that the fuel supply is limited to that required for perfect vulcanization. To operate it is filled with fuel and lighted.

When a tube is to be vulcanized it is clamped against the vulcanizing surface by a swivelled plate inlaid with asbestos to retain the heat and to prevent pinching the tube. It is stated that a repair cannot be spoiled by clamping one side of the plate more tightly than the other. The handle is always cool, permitting of removing the vulcanizer from the work as soon as the repair is finished. The Vul-Kit is adaptable to casings and without removing the latter from rim. It retails for $3.50.

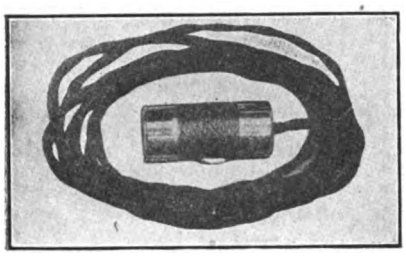


Digitized by Google

CENTURY CIGAR LIGHTER.

Operates on Any Six-Volt Battery and Is Nicely Finished.

The Century automobile cigar lighter is marketed by Mabey's Electric & Manufacturing Company, In-



dianapolis, Ind., and is a very neat, compact design. It is made to operate on a six-volt storage battery or dry cells, and comes finished in black leather with all trimmings nickel plated. The switch is well designed, is of the push type, and included with the equipment is seven feet of silk cord. The dimensions of the Century are one by two inches. In attaching to the car the maker recommends running the cord from the battery up through the floor at the back of the front seat so that the lighter will be convenient for all passengers.

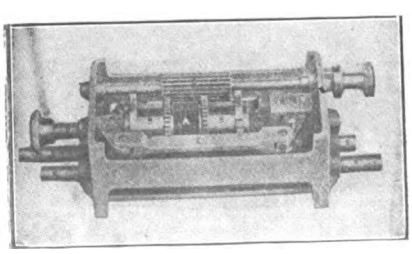
The company is also marketing an electric radiator heater for preventing freezing of the water in the cooler. The wiring plan is such that the usual storage battery and garage lighting system are utilized independently. It retails for $1.

BUNGAY GEARSHIFT.

Speed Changes Are Secured by Automatic Means.

The Bungay automatic gearshift is marketed by the Bungay Manufacturing Company, Brooklyn, N. Y. Use is made of the energy contained in a compressed helical spring to shift the gears, and through the medium of selector discs and rods. The spring is compressed by the final half movement of the clutch pedal, after which the proper gear may be selected by means of a lever on the steering column. By fully depressing the clutch pedal the energy of the spring is utilized to shift the desired gear through the selector rod and the shifter rod in engagement with it.

The spring employed to shift the gears is shown at A, and is held between two selectors, B, which are controlled through their gears meshing with the gear C on a rod connected to the steering column control. During the final movement of the clutch pedal, the shaft D is moved forward, compressing the spring A in either direction, according to the speed that is engaged, through the link E, levers F, and cross heads G and H. When in neutral, stops prevent the movement of the selectors and the release of the spring pressure. On the selectors being so turned, however, that one of their slots registers with a stop, the selector is allowed to move past the stop and engage a finger on one of the rods K, shifting the gear selected. The device is stated to weigh but 18 pounds and is adaptable to used machines.



A. A. A. FUEL TANK CAP.

Designed for Ford Cars and Has a Weather Proof Vent.

Among the new Ford accessories marketed by the A. Auto Appliance Company, Providence, R. I., is a neatly designed fuel cap for the roadster type of car having the gasoline tank exposed. One of the qualities of the cap is the use of a small tit in its centre, which the maker states prevents the entrance of water when the car is operated in stormy weather and when it is being washed.

Another feature of the design is the incorporation of a channel around the edge of the cap, it being intended to catch any fuel that may be splashed out through the vent hole, thereby preventing gasoline from run-

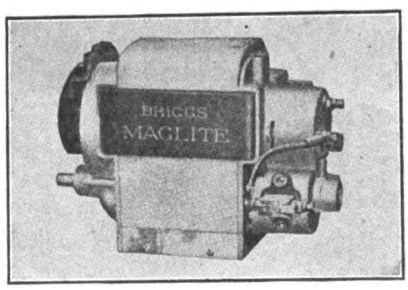
ning over the container. The caps are constructed of the best grade of bronze and aluminum, and the standard finishes are highly polished nickel and black enamel. The cap not only makes for convenience, but adds to the appearance of the machine.

BRIGGS MAGLITE GENERATOR.

A Combination Dynamo and Ignition Equipment.

The Briggs Magneto Company, Elkhart, Ind., maker of ignition specialties, is manufacturing the Briggs Maglite, which is a combined lighting generator and ignition unit. It is designed to be mounted on the base provided for the magneto, and is driven through the pump or other convenient shaft, at crankshaft speed when utilized in connection with four-cycle, four-cylinder motors.

The Maglite generates a direct current for charging the storage battery and for lighting the lamps. Its lower half consists of an armature revolving in an electro-magnetic field to generate current, and the field has two windings. One of these is out of



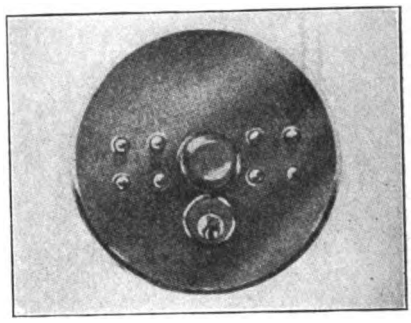
circuit when the unit is operating without the lamps. This is held to avoid overcharging the cells.

The upper half of the instrument is employed for ignition. It consists of a circuit breaker, similar in principle and construction to those employed on conventional magnetos. It mechanically closes and opens the circuit in exact synchronism with the motor, and has a wide range of advance and retard. In addition to this, it has a magneto distributor which automatically distributes the high-tension current to the spark plugs and according to the firing order of the motor.

THE LOCK-ALL.

Electric Switch Locking Lights and Ignition.

During the past six months a large number of locking devices, designed to prevent operation of the car by



others than those intended, have made their appearance. Among the latest is the Lock-All, an electrical device, manufactured by the H. P. B. Electric Company, 500 Fifth avenue, New York City. It is an electrical switch and lock combined, very compact and neat in appearance.

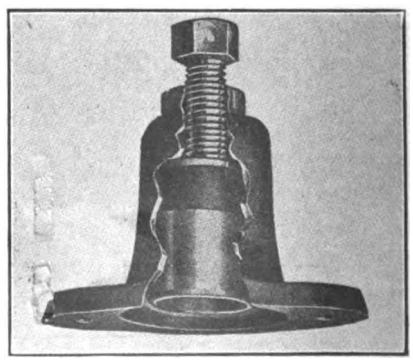
The Lock-All controls the operation of the lights, ignition and electric horn, and the lock utilized is a Yale. The switch is also fitted with a central knob, which, when kicked by the driver, serves to direct the current from the head to the side lights, or vice versa, without removing the hands from the steering wheel. It is stated that the lights may be locked in any combination, and that the ignition circuit can be broken or magneto grounded and locked to prevent use of the car.

MOSCO ANTI-RATTLER.

Designed Especially for Ford Steering Gear and Radius Rods.

The Motor Specialties Company, Waltham, Mass., with New York office at 50 Church street, is manufacturing the Mosco anti-rattling ball sockets, which are practical devices for eliminating the rattle of the joints at the ends of the steering gear connecting rods and the ends of the radius rods on Ford cars. They are made in two sizes, the larger being utilized with the radius rods.

The Mosco automatically takes up play and without restricting the movement of the steering linkage, which invariably results when the two halves of the joint are filed to eliminate lost motion. Adjusting means are provided by a screw member which moves a cup shaped plunger, decreasing the movement of the ball member. The resiliency of the anti-rattler is obtained by the use of a rubber pad which not only maintains an even pressure on the ball member, but absorbs all road shocks. The Mosco anti-rattler is constructed of high grade material.

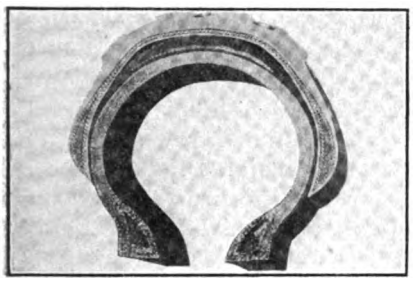


Digitized by Google

STANDARD TIRE PROTECTOR.

Reinforces Side Walls as Well as Tread of Shoe.

Announcement is made by the Goodyear Tire & Rubber Company, Akron, O., that it has formally taken



over the manufacture and sale of Standard tire protectors as a part of its automobile tire department. This action follows several years of watching, testing and investigation, and the company believes that there is a legitimate and useful field for the device.

The Standard tire protector is simply a tire tread, fashioned separately. It not only comes well down over the side walls of the casing to which it is applied, protecting them, but is so ingeniously constructed that when once applied it remains firmly in place without any other fastening than the inflation pressure of the tire to which it is applied and covers.

It is stated that it is quickly and easily applied, and that it cannot injure a tire carcass, as vulcanized repairing frequently does. It is also held to be available for service if the old casing gives out sooner than expected. The Standard is intended to obtain more mileage from shoes that are worn on the tread, but still strong as to side walls. It effects tire economy, especially in the larger tire sizes.

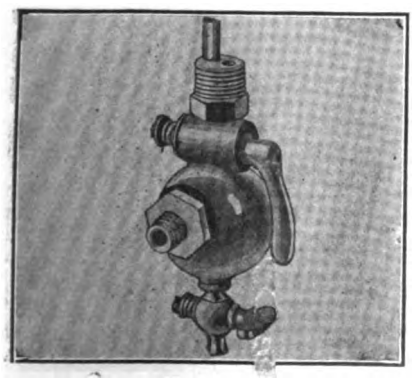
TRIO FILTER.

Made for Standard Models, Also Special Design for Ford Car.

The Trio Manufacturing Company, 1206 Bellevue avenue, Detroit, is marketing a combination sediment trap and gasoline reserve supply device which is intended to eliminate the necessity for carrying extra fuel. It is designed especially for those cars not equipped with auxiliary fuel tanks, and the maker states that the Trio not only insures a reserve supply of fuel, but makes a rigid tank connection.

It has a sediment trap to catch all foreign elements, and is also provided with a positive shut-off to the carburetor. A petcock at the bottom of the Trio permits of drawing fuel for priming purposes, etc.

The illustration shows the valve in a closed position. When the lever is turned to a forward position, the reserve supply is obtainable. With the

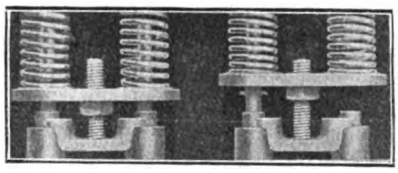


lever turned half-way over to an opposite position, the tank may be drained. The valve is of large dimension and is ground to a gasoline tight fit, and comes ready to install. It is stated that it may be fitted in 15 minutes and that the services of an expert are not required. The company is marketing a special design for Ford cars, which retails for $1.50.

PERFECT VALVE LIFTER.

Compresses Two Springs at Once and Is Designed for Ford Cars.

Winton L. Smith, 78 Clinton street, Newark, N. J., is marketing the Perfect valve grinding set, which is designed especially for the model T Ford motor. The equipment comprises the Perfect valve spring lifter, valve turning tool, wrench socket, grinding paste, gauge and complete instructions. The application and use of the valve spring lifter is shown in the accompanying illustration. It comprises a plate which fits under



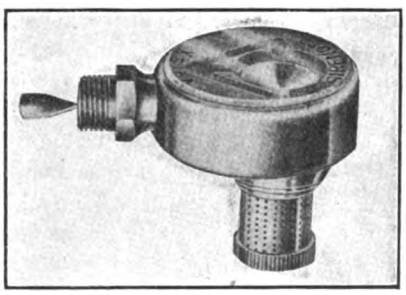
the spring washers and the lifter, which is fitted over the pushrod housing.

By rotating a nut on a threaded bolt integral with the lifter, two springs are compressed, enabling easy removal of the lock key. The wrench socket is utilized for displacing the cylinder bolts. The paste comes in two tubes, fine and coarse abrasive. The gauge referred to is utilized to determine the correct distance between the pushrods and the tappets. The equipment comes neatly packed and retails for $2.

THE VOTEX.

Automatically Admits Air to Intake Manifold, Weakening Mixture.

The Sireno Company, 20 Rose street, New York City, is marketing the Votex, which is fitted in the intake manifold between the carburetor



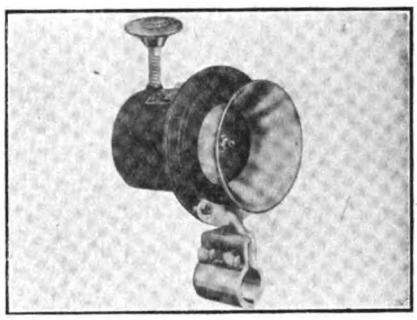
and the cylinders. It is held to be automatic in its action, delivering a certain amount of air to an imperfect mixture, and as required. The action of the Votex is stated to be as follows:

When the motor is operating idle, the Votex allows a small amount of air to enter the intake manifold, partially relieving the suction of the engine and weakening the mixture. When the throttle is opened quite wide the vacuum in the manifold is relieved and allows the Votex to close, enriching the mixture. When the motor gets up to speed the throttle is closed down and a very high vacuum is again created in the manifold, thus allowing the Votex to open and supply air, weakening the mixture to an economical point.

NEW KLAXON HORN.

Designed for Motorcycles and Is Manually Operated.

The Lovell-McConnell Manufacturing Company, Newark, N. J., maker of the Klaxon line of horns, has



brought out a model for motorcycles which is exactly like the regular hand Klaxon for automobiles except that it is fitted with a short projector and a special clamp for attaching to the busbar of the motorcycle, as shown in the illustration.

It provides the motorcyclist with an efficient signal, one that is operated without the service of batteries. It operates on the Klaxon principle of a vanadium steel diaphragm vibrated by a high speed cam wheel. In the case of the electric Klaxons this wheel is rotated by an electric motor; in the motorcycle design by a train of gears that attain high speed under the pressure of the pushrod. The new model has the true Klaxon note and is sold under usual Klaxon guarantee, covering service, etc.

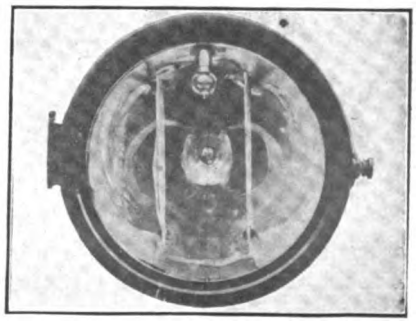
NODAZ.

Electrically Controlled Device for Eliminating Glare.

The Ward Leonard Electric Company, Bronxville, N. Y., maker of electric lighting and motor starting systems, is producing Nodaz, which is held to be a solution of the dazzle problem. In other words, the device permits the use of the electric headlights at full candlepower in the cities without conflicting with ordinances.

It comprises two pairs of translucent wings pivotally mounted in the reflector. These wings are opened and closed by magnets within the cover of the lamp, and are operated by pressing a button. With the wings closed, there is no glare, but it is stated there is a strong, diffused light, sufficient for operating on country roads. Pushing another button opens the wings, obtaining the usual rays.

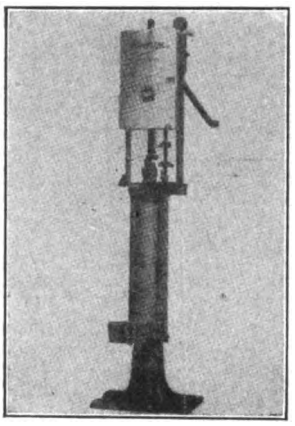
It is stated that whether the wings are folded or open, they do not perceptibly affect the efficiency of the bulbs, as they are very thin. The magnets controlling the device require but little current for operation; less than half that necessary with a horn, it is stated. One of the qualities of the Nodaz is that it may be attached to any headlight. In the illustration, the wings are shown folded. The Nodaz sells for $10.



Digitized by Google

MACHINERY, TOOLS, EQUIPMENT AND SUPPLIES.

MANY proprietors of garages complain that it is impossible to prevent a shrinkage in handling gasoline, as more or less of the fuel is used in the repair shop, etc., and it is difficult to check up the amount utilized. The Charles H. Simerson Company, 4135 Hudson boulevard, West Hoboken, N. J., has been organized to manufacture the Pumplok, which is held to solve the waste problem and to possess other practical features.



Simerson Pumplok.

One of the qualities of the device is that it is stated it may be attached to a standard pump in 10 minutes by engaging the main shaft by means of a slotted shaft, the construction being retained in place by an adjustable clamp that is locked and sealed, as shown in an accompanying illustration. It not only prevents unauthorized drawing of gasoline, but checks the amount drawn by each person having access to the pump.

The drawing of fuel is made possible by the use of key checks, each person being supplied with a given number bearing his number or individual design. Consequently, each must account for as much gasoline as represented by the checks found in the Pumplok's receptacle. A simple tally sheet is utilized and the operator sets down the quantity drawn, and the price for cash or charge sales.

A separate counter is incorporated, showing tenths of a gallon, which may be adapted to single or double acting pumps and to indicate the actual amount of gasoline drawn, whether in even gallons or fractions. A separate key check is required for each gallon or fraction thereof, and the pump is locked at the completion of each drawing, so that the next operator cannot take advantage of the fact that only a fractional quantity was drawn by the previous workman. The amount drawn is set down on the tally sheet as shown by the counter.

If any extra checks appear the attendant whose number they bear can be called to account. This prevents charge sales or even cash sales from being forgotten. It is stated by the inventor that it is impossible to remove the pump gear housing with its gears, and draw fuel by actuating the rack in other than the usual manner.

ACCO LUBRICANTS.

The A. C. C. Oil Company, Boston, is marketing Acco, which is held not to be a grease, but a lubricant composed of mineral compounds scientifically blended, free from mineral or animal acids and corrosive action. It may be termed a **universal lubricant**, in that it is used for everything requiring lubricating, from the largest to the smallest gear, and all components of the automobile, motor truck or motorcycle, except the motor.

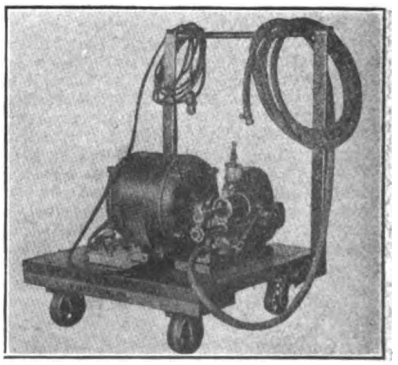
The company calls particular attention to the adhesive-cohesive qualities of Acco, stating that it follows the gears and is not thrown off by centrifugal force. It is also claimed that it does not channel and has a very high fire test, the minimum flash point being about 600 degrees Fahrenheit. It is pointed out that Acco forms a film around the balls and rollers of bearings and positively lubricates them, no matter at what angularity they may be.

Because of its adhesive qualities it is stated that less is needed to lubricate properly, making for economy. Another claim made for Acco is that it quiets metallic sounds and gear noises and is not affected by high temperatures or pressure. The maker states it can be removed easily from any metal or surface by paper or cloth, as no solvent is needed to displace it. Acco is put up in five, 10, 25 and 50-pound packages and comes in glass jars, in tins and in half-barrels and barrels.

BASTIAN GARAGE OUTFIT.

The General Utility Company, 1326 Ogden street, Philadelphia, is marketing a line of air compressors for garages and service stations. These include belt and gear driven pumps and equipments with and without tanks. That shown in an accompanying illustration is the model E, an electrically operated outfit, which is without a tank and is held to be very efficient and economical of current.

The outfit, which includes pump, electric motor, gauge, safety valve, 20 feet of hose, indicating starting switch, 20 feet of cable and plug, is mounted on an oak platform 22 by 24 inches. The equipment is moved easily about the garage, as it is mounted on rollers, suitable handles being provided. The company will forward catalogue on request.



Bastian Model E Garage Outfit.

NEW SIZES IN DAYTON TIRES.

The Dayton Rubber Manufacturing Company, Dayton, O., maker of the Dayton airless tire, announces that it is ready to supply its product in 28 by three and 30 by three-inch sizes for cyclecar service.

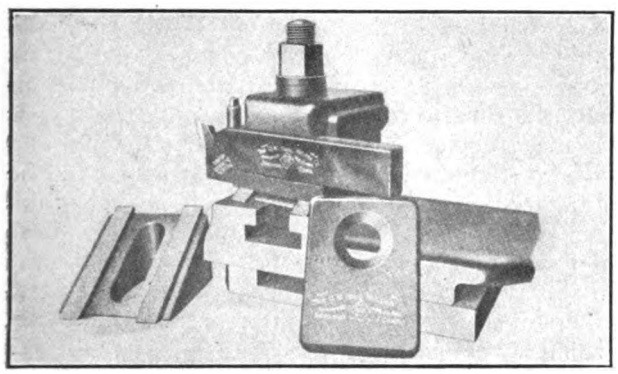
Digitized by Google

O. K. TOOL POST.

The O. K. Toolholder Company, Shelton, Conn., of which C. Hilterbrant, 99 Nassau street, New York City, is direct representative, is manufacturing the O. K. tool post holder, shown in an accompanying illustration. It holds the tool on the side, thus enabling one to get up near the chuck or face plate. With this tool post the tool is adjusted vertically, thus maintaining the clearance on the cutting tool. The tool post swings around at any angle.

It is stated by the company that after placing it in the desired position, the process of tightening has no tendency to twist the tool post, and that the bolt is made to fit the T slot so that there is no danger of injuring the same. The nut is made to fit the tail stock wrench.

When it is necessary to grind the tool and it is desired to remove the tool or holder, the vertical adjustment is not affected. By swinging the tool post around at right angles and using a small V block, it is held that the design makes the strongest kind of a boring tool holder. All



O. K. Tool Post for Holding Tool on the Side and for Adjusting It Vertically.

parts are steel drop forgings, carefully machined, case hardened and interchangeable.

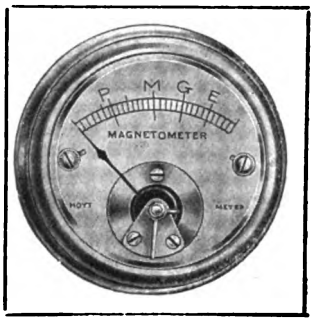
The O. K. is made in three sizes, the No. 1 post being suitable for 14 to 18-inch lathes, the No. 2 for 20 to 28, and the No. 3 for 30 to 40. The tool post No. 1 is adapted for holders from one inch to 1.5 high and any width, the No. 2 from 1.25 to 1.75 high, and the No. 3 from two to 2.5 inches high and any width.

The O. K. Tool Holder Company also manufactures the O. K. system of tool holders, and tools for lathes, planers, shapers, boring mills, etc.

HOYT FORD MAGNETOMETER.

The Hoyt Electrical Instrument Works, Penacook, N. H., maker of fine electrical indicating devices, has brought out a new magnetometer for the model T Ford which presents many practical features and is moderately priced. The Hoyt differs from other instruments utilized to ascertain the condition of the Ford flywheel magneto in that it is connected permanently in the circuit, being mounted on the dash. It is a sturdy little instrument, and is but two inches in diameter.

As will be noted by the accompanying illustration, the dial is calibrated, the letters indicating Poor, Medium, Good and Excellent. With the magneto operating, the indicating hand moves over the dial, indicating the condition of the generator at various speeds. The efficiency of the magneto is determined easily. After installing the magnetometer, readings at various speeds are taken, and by comparing these with those taken later, it is a simple matter to learn if the efficiency of magneto is not up to standard.



Hoyt Ford Magnetometer.

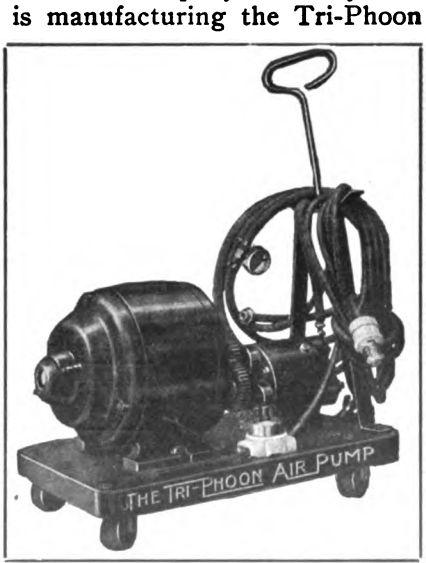
The Hoyt instrument is easily attached by drilling two .1875-inch holes in the dash and securing the studs by lock washers and nuts. The wiring is simple and the entire construction can be installed in a few minutes. The Hoyt is constructed with the same care and high grade material for which the product of this concern is noted. Each instrument is carefully tested.

K & B ADJUSTABLE WRENCH.

The Kilborn & Bishop Company, New Haven, Conn., is manufacturing the K & B adjustable wrench, which opens on an angle of 22.5 degrees with the handle, permitting of its use in places difficult of access with ordinary tools. All parts are interchangeable and carefully fitted. The movable jaw and handle are each a solid piece steel drop forging. The shape of the handle is such that the hand readily becomes conformed to it.

TRI-PHOON GARAGE PUMPS.

The Green & Swett Company, 737 Boylston street, Boston, is manufacturing the Tri-Phoon garage pump, which is not only moderately priced, but is very small and compact, occupying but little room in the garage. One of the qualities of the pump is that it does not require the use of a pressure tank, as tires can be inflated directly and very quickly. The cost of operating is slight.



Tri-Phoon Electrically Driven Garage Pump.

The pump is made in three and six-cylinder forms and the motor employed for the smaller

Digitized by Google

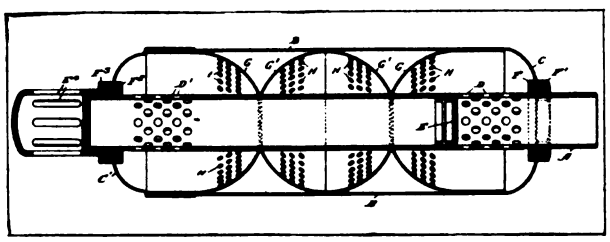
size is constructed for either a direct or alternating current. The six-cylinder unit is also marketed for either direct or alternating current.

One of the features of the Tri-Phoon is that it may be driven at a high rate of speed without injury to the working parts. As shown by the accompanying illustration, it includes a .25 horsepower electric motor, suitable length of flexible cord with plug, hose, pressure gauge and switch. The equipment is mounted on a substantial platform truck, which has a convenient handle for moving it about the garage.

The Tri-Phoon garage pumps are adapted for both private and public garages, and the guarantee is very liberal, the maker offering to replace free of charge any pump found to be defective or faulty in construction within a year. Descriptive matter will be supplied upon request.

STEINMETZ MUFFLER.

Joseph A. Steinmetz of the Janney, Steinmetz Company, Philadelphia, has been granted a patent for a muffler for internal combustion engines which is held to be very efficient in reducing noise and back pressure. The design, which is shown in section in an accompanying illustration, includes the usual outer casing, which is



Steinmetz Muffler, a Light Weight, Compact Design.

constructed of very light thin metal.

A small concentric tube passes axially through the larger member, and is provided with perforations, and partitions are included as indicated. Loosely mounted on the inner and fitting the outer tube, are oppositely turned perforated resilient rounded cups. These cups are so arranged that one receives the gases from the perforations, and partitions are included as in-sage of the gases is easily traced and it will be noted that they pass out into the open air through slots.

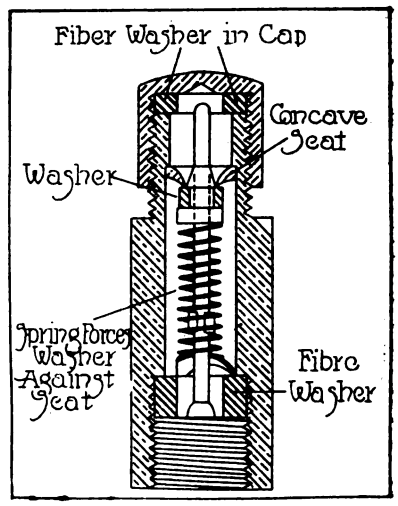
Features of muffler emphasized are: Light weight, easily disassembled and assembled for cleaning, etc.; efficient radiation of heat and the elimination of back pressure.

NEW BATTERY CATALOGUE.

The Electric Storage Battery Company, Philadelphia, is issuing a new catalogue, SL, describing the Exide battery utilized with automobile lighting and starting systems.

SMITH AIR VALVE.

The Smith Tire Valve Company, postoffice box 1965, Boston, is marketing the Smith easy pumping air valve, which is stated to require an almost imperceptible pressure to open in order to admit air into the inner tube of a pneumatic tire. It is designed to make easy the work of inflating shoes, and one of the qualities of it emphasized is that air is pumped into the tube from the beginning to the completion of the stroke of the pump. Ordinarily, the greater portion of the stroke is required to compress the air force open the conventional valve. The simplicity of the device is shown in an accompanying illustration.



Sectional View of Smith Easy Pumping Air Valve.

Not only does the Smith valve save time and labor, but it makes for tire conomy in that its case of operation insures that the owner will inflate the shoe to its proper pressure. It is a very compact device, being about an inch long and .375 in diameter. It is readily attached to the standard valve stem from which the cap and plunger are removed, as the Smith replaces these and performs their functions. The valves come in sets of five, are moderately priced, and are accompanied by the manufacturer's guarantee, which is very liberal.

AUTO-FLEX TUBING.

The National Metal Molding Company, Pittsburg, Penn., is manufacturing a new flexible tubing termed Auto-Flex. It is designed especially for enclosing wires utilized in electric lighting on motor cars, and fittings are also supplied. It is made in two forms, type A being made up of selected rigid fibre cord coiled upon itself in the form of a helix and tightly interwoven with very tough thread to form a tube, which is treated with a moisture proof compound. A covering of yarn is woven over the tube.

Type B is constructed in a similar manner, with the exception that the outer covering is braided and the mica finish is not used. It is utilized for wiring to the headlights or to any other point where the tube is exposed, and its surface is smooth for painting. Type A is employed for concealed work, such as under the hood or upon the chassis.

The fittings have been standardized, and particular attention has been paid to centralizing control and the distribution of the lighting circuits in one box and to the separation and arrangement of contact strips, so that connecting and testing is simplified.

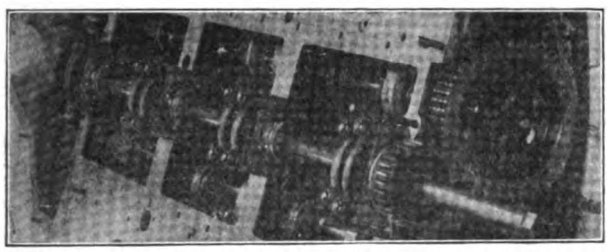
DETAILS OF MARTELL ALIGNING REAMER.

A TOOL that was originally designed for the reaming of automobile crankshaft bearings, the idea being to provide the repair man



Martell Device Shown Aligned to Ream Crankshaft of Packard Motor.

with a means of accurately aligning these bearings and saving time in the operation, is the Martell aligning reamer, recently placed on the market by the Martell Motor Company, 1928 Columbus avenue, Boston, Mass. The simplicity of the device has suggested possibilities along other lines, but its practicability has been demonstrated in the service above mentioned, in that it is stated that it has been found that better results can be accomplished with three or four hours' work than with the same number of days by the old hand method.

The parts of the device are shown herewith. A is an eccentric, flanged bushing that, in use, is mounted directly on a shaft. U is a short shaft used in reaming connecting rods, but the longer shaft for reaming crankshaft bearings is similar in every respect, except for length. The flanged portion of this bushing is provided with a radial slot, concentric to the surface engaging with the bore of B, which is another eccentric, flanged bushing in the bore of which A is an easy wiring fit. The flanged portion of B is provided with six tapped holes, concentric with the bore, and a cap screw B_1, passing through the radial slot in A serves to lock the two bushings together in any desired position. The edges or faces of the flanges are graduated, A having 19 divisions and B 20, which give a vernier reading in thousandths of an inch, the extreme limits being 0 and .095.

C is a conical bushing, the tapered portion of which is provided with a fine thread, 70 to the inch, which permits it to be screwed very firmly into the ends of the bearings or holes to be reamed. The bore of this bushing is ground to take the bushing B, and it is provided with four clamping screws to lock the position of B when the desired point is determined. The adjustable plug is shown assembled at V.

The reamer consists of two heads, D and E, carrying six blades in the slots, as shown in the assembly N. At either end of each of these slots are wedges S (enlarged) which engage the inclined surfaces of the blades I, J, K, and cause them to expand or contract as the adjusting nuts O, P, Q and R are moved in one direction or the other. T T are clamping nuts that hold the reamer head in any desired location on the crankshaft.

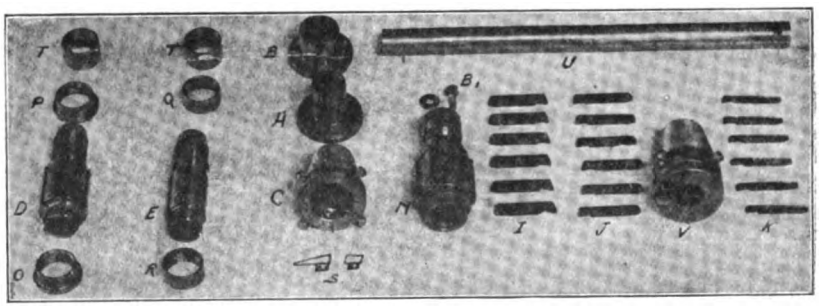
The other illustration presents the device aligned to ream the crankshaft of a Packard six-cylinder motor. This view shows the crankshaft gear mounted directly on the reamer shaft by means of a special bushing and the proper mesh of the gears is obtained by means of the eccentric bushings. The rear end of the shaft is then aligned to the clutch shaft bearing support at the extreme rear, and also aligned parallel to the top of the crankcase.

The blades of the reamer are made of non-shrinking steel, oil tempered, ground and provided with a six-degree cutting edge on the front end only. In order to ream clear through the bearing, the bushing at the back must be removed, when the reamer acts as its own guide for the short distance remaining to be reamed. The bushing is then returned to its former position.

When the reamer shaft is first lined up a positive turning movement is determined. Thus, if it be found that three ounces weight on a four-inch leverage will move the shaft, then, when the bushings are returned to their original positions, the same weight and leverage must produce the same result. In practise, however, it is said to be found unnecessary to use the weight, except on rare occasions.

The features of the device are held by the maker to be:

First, the supporting of the reamer shaft by a number of temporay bearings.



Individual Components and Assemblies of Parts of Martell Aligning Reamer, Lettered for Convenience in Describing.

Second, the fact that these temporary bearings engage directly with the hole to be reamed, thus making the device entirely independent of any type or form of construction of the supporting members of holes to be reamed. The fact that the crankcase is not bolted down to a rigid base is an added assurance of perfection of alignment.

Third, the facility of adjustment of the position of the reamer shaft in relation to any point or points, as for instance, paralleling some given surface or obtaining the correct mesh of a train of gears, one member of which is to be carried on the shaft for which the bearings are being reamed.

Fourth, the securing of a great range of adjustment of the reamer blades with a relatively small lateral movement of the adjustment nuts.

Fifth, the means of securing the reamer heads to the shaft in such a manner as to allow them to be solidly clamped in any desired position.

AGENTS WANTED--NEW BOOKS--DESIRABLE LINES.

The American Auto Supply Company, 1741 Broadway, New York City, is mailing to the trade free on request, its new catalogue, which is claimed to be the most complete list of Ford accessories and parts ever published. Each device, etc., is described and illustrated and the catalogue is really a dictionary of Ford information.

★

Edgar T. Ward's Sons, 25 Purchase street, Boston, is marketing cold drawn seamless tubing in sizes from .125

Cold Drawn Seamless Steel Tubing Marketed by Edgar T. Ward's Sons.

inch overall diameter to 8.125 inches, and is prepared to fill orders promptly, having in stock over 1,000,000 feet. Cold drawn seamless tool steel tubing of special analysis for parts, jigs, bushings, dies, where extreme durability and great hardness is required, is also carried. The company mails a monthly stock list and will forward a trial piece upon request. Tubing of any quality is manufactured to meet individual requirements.

★

The Cox Brass Manufacturing Company, Albany, N. Y., has compiled some very interesting, as well as instructive, data on the use of welding and decarbonizing equipments. The booklet explains fully the practicability of the newer method of welding and shows how time and money is saved. The brochure will be mailed free on request.

★

The Standard Woven Fabric Company, Framingham, Mass., maker of the well known Multibestos brake lining, is issuing a neat brochure entitled, "Safe Within the Grip of Multibestos", the contents of which are of particular interest to the garageman, dealer and repairman. The book contains valuable and instructional data and will be mailed free upon request.

★

The Platt & Washburn Refining Company, 7 Broadway, New York City, which markets Veedol, a motor oil, made from Pennsylvania petroleum, has a very attractive agency proposition for 1914, which will be forwarded upon request. The company was incorporated in 1885 and its product is the result of practical research in shop and laboratory. It is adapted to the lubrication of pleasure and commercial vehicles.

★

The Bermo Welding Apparatus Company, Omaha, Neb., maker of welding outfits, which markets its product direct to the trade, manufactures a variety of welding equipments, including a carbon remover. The company is making a special offer, which may be obtained by writing the manager of Dept. K. It enables small repair shop and garages to take advantage of the profits possible with this equipment.

★

The Silvex Company, 60 Wall street, New York City, has an attractive proposition for the trade in its Bethlehem five-point spark plug, and the merits of the design are set forth in an interesting booklet published by this concern. The brochure contains considerable data on ignition systems, and the suggestions made should be of decided value to the garageman and repairman. The booklet will be mailed free upon request.

★

The National Motor Supply Company, 5604 Euclid avenue, Cleveland, O., maker of garage and portable vulcanizing equipment, has adopted a special selling plan which should prove of interest to garagemen, in that the vulcanizer is not paid for until after it has earned its cost. The National garage steam vulcanizer vulcanizes three tubes and two casings at a time and is heated by either gas or gasoline. The company invites the trade to write for its special offer.

★

The Danver Accessory Company, 18 Broadway, Pawtucket, R. I., manufacturer of Daco Ford accessories, has improved its combination anti-rattler and grease cup by incorporating a self-fitting grease cup, which eliminates the trouble experienced when replacing the cup after refilling it with grease. The company has increased its manufacturing facilities and is prepared to supply its product in large quantities. Descriptive matter and discounts will be mailed upon request.

The Harding Specialties Company, Inc., 755 Boylston street, Boston, is marketing the Boston tail light detector, which is an electric indicator actuated by lamp failure or defective contact. It gives an instantaneous warning of an extinguished tail lamp, insuring against arrest and fines, etc. It is attached to the dash in plain view of the operator and a red light is flashed when the tail light is extinguished. The device is moderately priced and the company has an interesting proposition for the trade.

★

The Williams Foundry & Machine Company, Akron, O., has compiled a booklet of expert information on tire repairing, and the brochure contains figures of interest to all garages and repair shops not fitted with facilities for repairing tires and tubes, as well as those engaged in this line of work. The booklet, catalogue No. 12, shows the cost of equipments, operation, etc., and explains clearly the opportunities that may be developed into a very profitable business.

★

The McQuay-Norris Manufacturing Company, St. Louis, Mo., is marketing the Leak-Proof piston ring, which differs from conventional design, in that it is made in two pieces, each one having a flange at right angles to the encircling band. When assembled, each flange completely covers the opening in the other piece, preventing the escape of the gas. One of the qualities of the design emphasized is that considerable service does not impair its efficiency. The company manufactures the Leak-Proof to meet requirements and will supply additional details and prices on request.

★

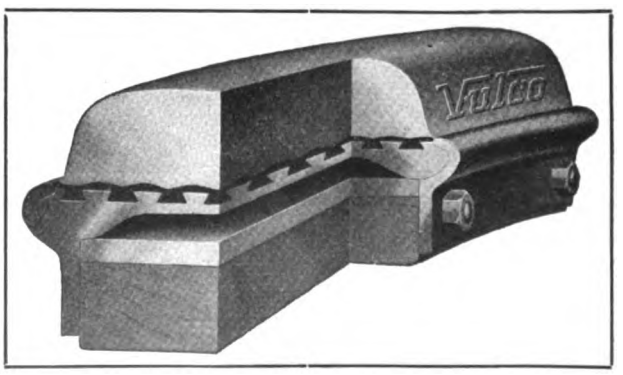
The Tarrytown Motor Car Co., Inc., 1790 Broadway, New York City, which has developed a parcel delivery vehicle termed the Motokart, is designed especially for butchers, grocers, bakers, florists, cleaners and other similar tradefolk dealing in light merchandise, has an interesting agency proposition. The company wishes to get in touch with live dealers, and is prepared to award exclusive rights for certain territory to worth while dealers.

★

The Auto Parts Company, Providence, R. I., manufacturer of Ford specialties, whose trade mark, Apco, is well known to the trade, and the motorist as well, is mailing its 1914 catalogue, which will prove of interest to dealers handling Ford specialties, in that a number of new devices are listed. Among the new products of the company are a moderately priced, high grade tire cover, spindle body bolt, pushrod, adjustable spindle arm bolt and a pressed steel jack. The last named retails for $1, and is guaranteed to lift and sustain 2000 pounds. The catalogue describes and illustrates a number of specialties which will appeal to the Ford owners, particularly at this season of the year when the car is being prepared for the season, and when the new machine is being equipped. The Auto Parts Company guarantees Apco goods to be as represented.

★

The Vulcan Rubber Company, 403 Swetland building, Cleveland, O., maker of the Vulco cushion joint truck tire, desires representatives for its product in every city. Exclusive territory will be awarded to live deal-



Vulco Cushion Joint Truck Tires, Exclusive Agency for Which Is Offered by the Maker.

ers, and the company will co-operate in the selling campaign, also sending an expert salesman. One of the qualities of the Vulco is that it may be attached easily and quickly to the wheel by one person without any other tools than a jack and a wrench. This is made possible by sectional base and cushion joints. High cushioning qualities, durability, lightness and maximum strength are among the features of the design emphasized by the manufacturer.

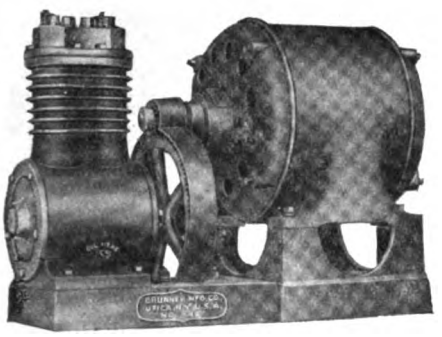
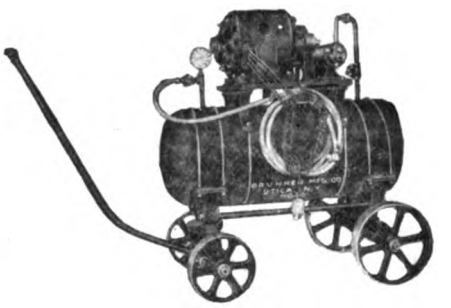
BE SURE "BRUNNER" IS ON YOUR AIR COMPRESSOR



Before you pay out your good money for an Air Compressor, get the real facts.

Get the opinion of the Brunner users and compare with what you hear from the garage men who have bought a "bigger machine for less money."

Go still further:—Examine the construction of the Brunner line of Air Compressors and compare with the quality of materials and the manner in which the other machines are put together.



Finally:—Find out how much time and attention are given to the "side line" compressors, in comparison with the nine years of specializing on Air Compressors by the entire force of Brunner engineers and employees.

These are comparisons which we want every prospective purchaser to make before he buys an Air Compressor.

In the Brunner line of Air Compressors there is nothing but the very best materials—put together in the strongest possible manner—by experienced workmen who are specialists in their line.

In addition, every Brunner Air Compressor is backed by an honest, binding guarantee for service, durability and satisfaction, which always has a liberal construction by the manufacturer.

Brunner Air Compressors stand unsurpassed for a long, durable, satisfactory service, with the lowest repair expense.

For the sake of getting the best returns for your money—be sure you find the name "Brunner" on the Compressor you buy.

Get information and prices from your jobber or write us direct.

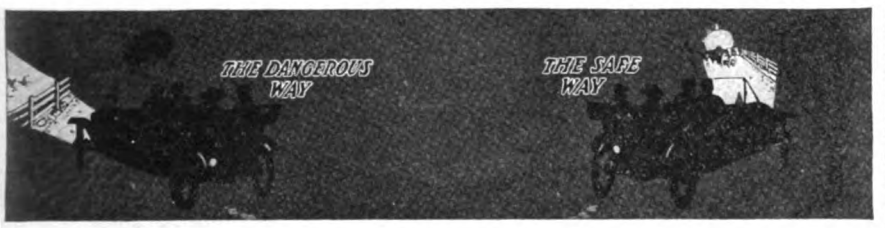
Utica, N. Y.

NEW YORK OFFICE
Hudson Terminal Bldg., 30 Church St.



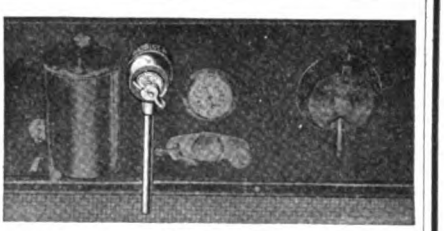
FOLLOW THE ROAD TO PROFIT WITH TURNING HEADLIGHTS

Every Ford car which comes into your garage is a live prospect for these safe and sane Turning Headlights. They automatically follow the slightest movement of the steering wheels and throw their light where you need it most—in the center of the curving road you are trying to follow in inky darkness.

There is a big demand for this device. The Safety First agitation sweeping the country at present and the caution this has inspired in night driving, makes these supports quick sellers and profitable.

Turning headlights will never give you one minute of trouble after you have put them on—a quick job of 30 to 45 minutes. They won't rattle or work loose and are sold under a rigid "Money Back" guarantee if not found perfectly satisfactory after 30 days' trial. Retail price **$10.00** prepaid—and a good profit for our dealers.

Write us for the territory you can actually cover thoroughly—and prices. Order some sample sets at once. They will go fast. You get all the prospects in your section which our advertising develops.



Gasolock Your Cars

Here is the safest device yet invented to prevent joy riding and auto stealing. The Gasolock shuts off the gasoline with a simple touch of the foot or finger and can only be opened again by the Yale keys furnished with it.

The Gasolock saves automobile insurance against theft; it saves gasoline waste from leaky carburetors; it saves cars from joy riding wrecks.

Over 800 in Use in Detroit. We hold a basic patent on all devices for locking the gasoline supply and have started suit against infringers. This device can be installed in any car in 30 minutes and is positive protection.

There is a big field for the sale of the Gasolock in your city. Millions of dollars worth of cars are stolen yearly. Owners need this protection and will buy it readily. It is the simplest, safest, and cheapest high grade device on the market.

The Gasolock is beautifully finished in either nickel or brass and comes in several lengths to suit conditions. It sells for **$10.00** prepaid at retail—a small sum for absolute protection. Any car or motorboat can use it.

Write us for our proposition and prices. Order a few and see how owners will take them away. Rather "Safety First" than a stolen car.

TRADE MAILING LIST

Users of Trade Names of Individuals and Concerns in all branches of the Automobile Industry can secure practically 100 per cent. efficiency through our service. Trade names that are not constantly used soon lose all value. Our list is worked eighteen times every twelve months; this assures patrons of a Practical List and one that can be maintained with the Greatest Economy.

The up-to-date method of operation in connection with our list saves more than the first cost within sixty days from date of purchase.

A few hours attention each month will keep our list to the highest standard and any office boy can take care of the details.

Write Us Your Requirements. Our Proposition Is an Interesting One. The Charges Are Reasonable.

Dixon's Graphite Transmission and Differential Grease No. 677

When you use this splendid mixture of the finest natural flake graphite with a high grade mineral grease, the rubbing and grinding which wears out your gears and bearings comes upon the hard, smooth, almost frictionless veneer of pure graphite which builds up over the metal —and wear and noise and wasted power are minimized. Send for "Lubricating The Motor", No. 49.

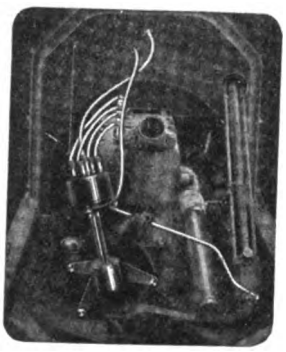
Ford Dealers and Garagemen



Equip your customers' Ford cars with the ATWATER KENT FORD IGNITION SYSTEM. Your customers can prove the following results on their own car on a make-good-or-money-back basis:—

1. **Perfect ignition at all speeds from 3 to 40 miles per hour.**
2. **Smooth running without missing or uneven firing.**
3. **Easier starting in cold weather.**
4. **Vibrator and magneto trouble eliminated.**
5. **Will run idle at lowest possible speed and throttle down to 3 miles per hour on high.**
6. **Increases both power and speed and saves gasoline.**
7. **Lessens sooting of plugs and carbon deposits.**
8. **Quickly and easily installed without altering car in any way. No machine work—no holes to drill—a wrench and screw driver are the only tools necessary.**
9. **Costs much less than a magneto and gives better results on any car.**

Let us send you Circular L describing the ATWATER KENT SYSTEM for Ford and other cars.

PANHARD OIL

Dealers' Oil Bulletin No. 5

Panhard Oil advertising is not easy to write. Anything we say, can be claimed just as easily *on paper* for any cheaper and inferior product. Still there is a difference, which will inevitably show sooner or later in an engine.

Have you caught the tone of sincerity in these advertisements? We don't try to "fool" our dealers. Panhard Oil in actual use will make good every claim, and will give you every cent of your money's worth.

Panhard Oil has been on the market since 1904. It was known then as the best, and it still is. Think of the widely advertised brands which have flourished for a while and dropped out of sight in the meantime. Panhard Oil is building for permanent success. So is the dealer who sells it.

When your own experience has given you this confidence in it, your sales will surprise you. There is no oil to which you can give your strongest personal recommendation more freely. Write now for details.

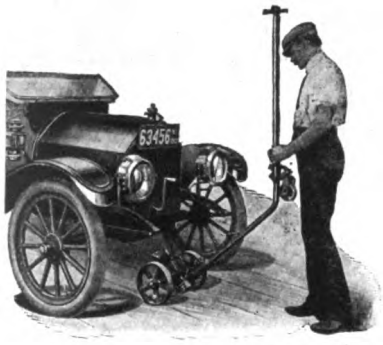
AUTO TURN JACK

Garage Equipment That Must Interest GARAGE OWNERS

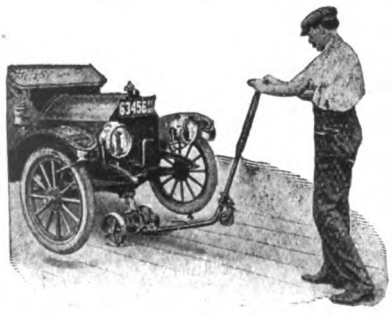


Approaching the Car

By lifting up the long handle it tips back and lowers the lifting post low enough to get under the lowest axles. The handle is so shaped that rods or bumpers do not interfere.

Making the Adjustment

One upward movement of the small hand lever raises the lifting post up against any height axle. After the Jack is removed from under the car, slam this lever down and the post drops back to its lowest position.



Raising the Car

Pull the long 5½ ft. handle down, causing the Jack wheels to run under the axle past center, raising the car two inches. The Jack handle will pass under the raised wheel clear back to the foot board if desired.

GARAGEMEN Making Big Profit Figure the Value of Each Cent, of Every Foot of Floor Area, Every Minute of Labor, and Have the Tools and Equipment That Earn Money.

Use an AUTO TURN JACK. With It You Can Make Every Inch of Floor---a Big Factor---Pay You Cash. CHEAPER THAN RENT.

AN AUTO TURN JACK IS CHEAPER THAN WAGES. With One a Man Can Handle Any Car, Raise or Turn or Place It. No Reason to Start a Motor or Have a Crew of Men to Move a Machine. Let the AUTO TURN JACK Do It.

AN AUTO TURN JACK IS CHEAPER THAN MAKESHIFT TOOLS. Saves Time and Labor in the Repair Shop, in Tire Changes, in Wheel and Axle Work, and Is Always Available.

AN AUTO TURN JACK IS NO EXPERIMENT. Built for Practical Service, of First Class Material, Enduring for Years, It Is a Tool Useful in Hundreds of Ways Hundreds of Times Daily. In Use in the Largest and Best Managed Garages of the Country.

A Postal Will Bring Full Information and Prices---Send Yours Today

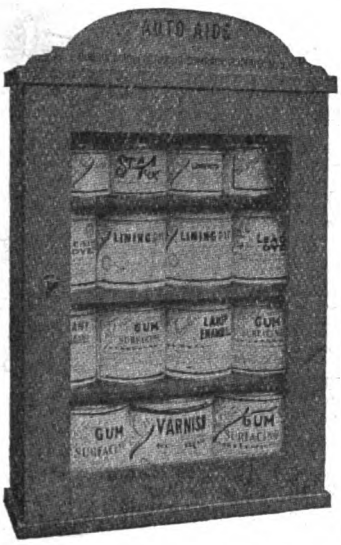
DISPLAY CABINETS For AUTO AIDS



They Work Day and Night For the Garage Owner

You pay rent for your floor space, and you try to make every square foot of it pay you in return—

But did you ever think that you pay rent on your wall space—and what does it pay you in return?

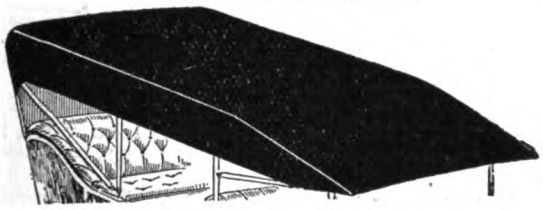
Make Your Wall Space Work It Helps Roll Up Your Profits

You haven't a customer who does not always want his car to look like new.

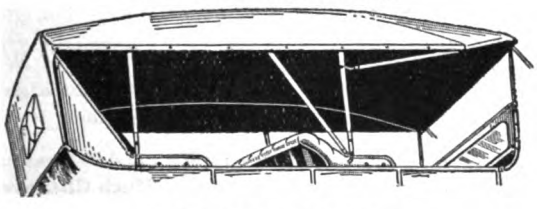
The main reason why so many cars look old and worn is because the owners believe it would be too expensive to keep up the new appearance of their cars—They figure painters' bills, overhauling, refinishing, etc. and decide to wait until their cars are in bad shape before having anything done so as to get their money's worth.

Isn't that so? You and I would do the same thing unless we knew of a better way.

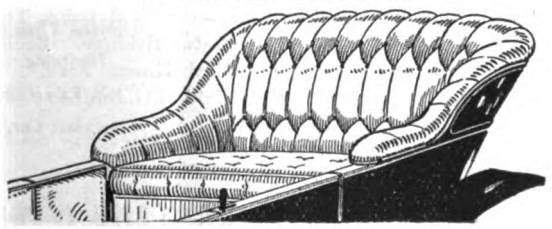
The Auto's Top—Outside.



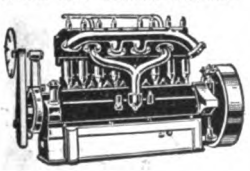
The Auto's Top—Lining.



Leather Top and Cushions.



Protect All Metal Parts.



The Best Way—Is the "Rub-On" Way

Estimated cost for 5-passenger car for whole season

To keep top in perfect condition:	
1 Quart Rub-R-Tite	$1.50
To keep top-lining spotless:	
1 Pint Rub-On Auto Top Lining Dye	1.50
To keep seats in perfect condition:	
1 Pint Col-R-Ol Leather Dye	1.50
To keep all metal parts in perfect condition:	
1 Pint Stay-On Enamel	.50
To keep body paint in perfect condition:	
1 Quart Rub-On Varnish	1.00
To mend leaks in radiator:	
1 Can Sta-Fix Radiator Mend	.50
	$6.50

$6.50 will keep every part of your car looking "like new" for a whole season.

Have you a customer who would not invest $6.50 when such a result is absolutely guaranteed?

Our self selling Display Cabinet hung in a conspicuous place will let your customers know these facts—and it will have done them a real service and a good piece of business for you.

Special Offer to Garage Owners

Write for our special offer to Garage Owners of free cabinet, free delivery and liberal commissions on all sales made by the self selling Display Cabinets.

"GARAGES" Manufacturers, Contractors, Machine Shops, Foundries, Steel Mills, Railroad Shops, Street Railways

In making broken parts good as new, and simplifying manufacture, The "MONARCH" system has worked wonders.

"Garages" use this machine for Welding, Brazing, Straightening, Soldering, and Removing Carbon.

Automobile and other factories use it for reclaiming defective castings, filling up misplaced holes, adding bosses, etc.

Welded at a Cost of $4.00

PROFITS——PROFITS——PROFITS

When you get one of our $75.00 welding outfits in your plant this is what you will do with it:

CRANK CASE WORTH $90.00

Repair Charges	**$45.00**
Cost of Repair	**2.50**
Profit to you	**$42.50**

The charges for welding are based on one-half the price of a new casting.

Customer saves 50%. He is satisfied.

You make nearly 50%. You are satisfied.

There are enormous profits in welding for you and enormous savings for your customers. How many jobs like the above is it going to take to pay for your outfit at $75.00? And look at the countless little jobs taking only a few minutes time to do, and bringing in a steady stream of good, clean, cash profits every day.

Braze Buggy Tire Wires Instantly. Weld Castings. Weld Split Pipes. Correct Mistakes in Design. Weld or Straighten Frames. Bond Steet Rails 1-10 the Cost, 1-10 the Time.

Make Boilers and Tanks Any Size, Any Gauge, Any Pressure, Without a Rivet—Stronger and Look Better and Much Cheaper to Make.

Weld Cracks From, and Between Rivets, Cracked Tube, Tube Plate Bridges, Broken Mud Rings, Etc. "Its Field Is Unlimited."

Is Unequalled in the Small Car Classes.

It is Sold with AN ABSOLUTE GUARANTEE of MATERIALS and WORKMANSHIP.

AGENCY PROPOSITIONS

Agencies for Some Unassigned Territory Can Be Made. Proposals Must Be Received Immediately, as the 1914 Production Is Limited.

SPECIFICATIONS

MOTOR—4-cylinder, 4-cycle, 15 horsepower, water cooled, L head 70mmx100mm. Cast enbloc.

LUBRICATION — Self-contained, constant level splash and force system, plunger pump operated by camshaft.

COOLING—Water cooled, thermo-syphon system.

TRANSMISSION—Unit, with motor, crucible steel gears, double heat treated, oil hardened, running on ball bearings, three speeds forward, one reverse.

CLUTCH—Simple cone clutch, three-spring adjustable type.

FRONT AXLE—Tubular, with drop center, conventional type.

REAR AXLE — Bevel gear drive, patented non-skidding differential.

STEERING GEAR—Worm and sector type, with 15" steering wheel.

FRAME—Pressed steel, channel section.

SPRINGS—Front, ¼ elliptic; rear, cantilever.

WHEELS—Wire, 28x3 tires.

WHEELBASE—100" wheelbase, 42" tread.

CONTROL—Left hand drive, center control.

GASOLINE—Gravity feed tank, located under cowl.

BODY—Luxembourg design; boulevard-roadster type, streamline effect; Staggered seats with ample leg room; luxurious upholstery; parcel compartment in the rear.

SPEED—45 miles per hour. Plaza model, 65 miles per hour.

FINISH—Deep purple, black trimmings.

Sell Lubrication Instead of Oil

YOU KNOW that a poor oil is dear at any price; that to its original cost should be added the cost of fixing engine troubles, grinding valves, additional gasoline consumed and power lost.

You know, too, that the difference between a cheap oil and the best lubricant a car owner can buy, costs him only $5 to $10 a year.

Tell your customers these facts. Sell them the best oil on the market. Give them **lubrication** for their money, and you will be selling them **service**—the foundation on which all modern business success is built.

VEEDOL

is a "quality" lubricant, a proven oil from Pennsylvania petroleum. It is the result of our 30 years' experience with lubricating oils. It gives **the most lubrication—least carbon deposit.**

Veedol, owing to its special filtration, contains ***no free carbon.*** No lubricating oil is perfect, in the sense that it will eliminate ***all*** friction. Veedol is the most nearly perfect ever produced.

We want responsible representatives for Veedol everywhere. It will be a business-builder for the dealer who handles it in any locality. If there is no AGENT near you, write at once for terms and full information of the intensive selling plan by which we are introducing Veedol to car owners in your neighborhood.

Pyrene MONEY MAKING

---Money Saving Proposition to Dealers

¶ Insurance premiums are actually reduced 15% when the car carries Pyrene, the most efficient fire extinguisher known to science on fires in highly inflammable materials. All leading companies allow this reduction which was originated by the Aetna Accident and Liability Company and the Automobile Insurance Company of Hartford.

¶ In most cases this saving alone more than pays for Pyrene the first year, while the saving during the succeeding years is "velvet".

¶ It should be easy to sell Pyrene, don't you think? And it is because Pyrene saves or makes money for everyone. You get yours on the sale; your customer gets his in lower insurance; and the insurance company get theirs in reduced fire losses.

¶ A campaign of publicity is carrying the good news of lower insurance rates to car owners throughout the United States. Several hundred thousand owners will shortly receive a bulletin direct from us, telling them to go to you for Pyrene and lower insurance rates. Get ready to handle this demand. We will gladly help you. Sign the coupon now and hook up with this money saving—money making proposition.

Listen to What DAVID L. GALLUP Says About Brake Lining

We print herewith an extract from Prof. Gallup's report at the conclusion of a series of tests made of different brands of brake lining. Five samples were submitted—the five which are most widely used in the industry. Prof. Gallup's report is in part as follows:—

"In carrying out these tests all the samples of brake lining were subjected to exactly the same treatment, the conditions chosen being, as nearly as possible, such as are met with in actual practice. The tests were conducted with the object of determining the characteristics of various samples with particular reference to—

No. 1 Braking Ability (Frictional Quality)
No. 2 Heat Resistance
No. 3 Wearing Qualities } **(Durability)**
No. 4 Effect of wear and heat upon the braking ability

After a careful examination of the brake linings upon the completion of these tests, and an analysis of the results obtained, it is evident that MULTIBESTOS stands superior to the other brake linings tested with particular reference to the following points:—

Braking ability under all conditions of service
Durability
Resistance to effect from heat"

(Signed)

THE ACCESSORY -AND- GARAGE JOURNAL

Devoted Exclusively to the Automobile Trade and Allied Interests

VOL. III. PAWTUCKET, R. I., APRIL, 1914. No. 12

VACUUM OIL COMPANY ADDS $10,000,000.

Big Tire Concern Incorporated in Connecticut---Financial Plans of U. S. Heat & Lighting Company and Kelly-Springfield Tire Company---Industrial News.

STOCKHOLDERS in the Vacuum Oil Company, Rochester, N. Y., may have opportunity to subscribe for $10,000,000 additional capital stock during the current year, the officials of that concern having had a plan for increasing the capital from $15,000,000 to $25,000,000 since the first of the year. It is stated that the new issue would greatly assist in the expansion of the business and bring the capital to a figure more nearly representing the net assets. The annual report shows the following comparative figures:

Assets.

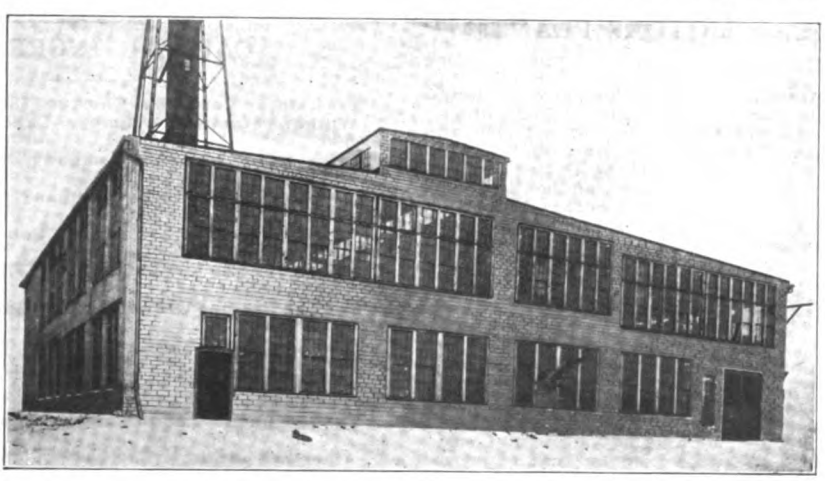
	1913	1912
Real estate, machines	$3,501,109	$3,138,907
Manufacturing, merchandise, material and stock in process	7,008,885	4,967,604
Cash and debts receivable	12,544,054	12,469,420
Stocks in other companies	11,430,136	11,422,126
Total	$34,484,184	$31,998,057

Liabilities.

Capital stock	$15,000,000	$15,000,000
Insurance reserve	100,840	.....
Accounts payable, floating indebtedness	2,232,295	2,322,781
Surplus	17,151,049	14,675,276
Total	$34,484,184	$31,998,057

Since the dissolution of the Standard Oil Company, the Vacuum Oil Company has built a refinery in Bayonne, N. J., and has spent large sums in extending its refining and marketing facilities in Russia, Austria-Hungary, Germany and Australia. The greater part of last year's surplus earnings is said to have been turned back into the property.

The capital was increased from $2,500,000 to $15,000,000 in February, 1912. The American oil plants are located in Rochester and Olean, N. Y., and Bayonne, N. J. The $11,430,136 invested in other companies is represented by branch houses distributed throughout the world. A semi-annual dividend of $3 has been declared, payable in May.



One of the New Factory Buildings Recently Completed by Kissel Motor Car Company, Hartford, Wis.

FORMS $1,500,000 TIRE COMPANY.

The Norwalk Tire & Rubber Company, Norwalk, Conn., has been incorporated with an authorized capitalization of $1,500,000, the incorporators being Earle Banks, John Pierce and Sayer Youngs. It is understood, however, that the controlling factor in the new concern is to be W. B. Miller, one of the organizers of the Diamond Rubber Company.

Mr. Miller was secretary and sales manager of the Diamond company throughout the period of its separate existence, and became an official of the B. F. Goodrich Company when the two concerns were merged in May, 1912. He disposed of his holdings in the Goodrich company and withdrew from active connection therewith about a year ago.

The Norwalk company is to start business with $200,000 paid in. The stock is to be divided into 5000 shares of preferred and 10,000 common, the former bearing seven per cent. A factory has been acquired at Winnipauk, Conn., a suburb of Norwalk.

NEW KISSELKAR PLANT.

According to information from Milwaukee, Wis., the Westinghouse Lamp Company, New York City, has made arrangements to take over the former Romadka trunk works in the former city for its western branch factory. This building has been occupied for some two years as a branch plant by the Kissel Motor Car Company, Hartford, Wis.

The latter company has recently completed 60,000 square feet of additions to its Hartford plant, one of which buildings is shown in an accompanying illustration. This will afford opportunity for consolidating the business of this concern at the main works.

The Kissel company entered the automobile industry in a

Digitized by Google

building 50 by 100 feet, eight years ago. Today, with the completion of the additions mentioned, it has one of the best equipped plants in the country, where three KisselKar pleasure car models and six types of KisselKar trucks are produced.

RECOMMENDS BOND ISSUE.

The committee of investigation, composed of J. A. Sleicher, F. R. Humpage and Guy M. Walker, has recommended to the stockholders of the U. S. Light & Heating Company, Niagara Falls, N. Y., the authorization of an issue of $1,500,000 first mortgage, six per cent. bonds, running for 15 years, $100,000 of said bonds to mature three years from date, and $100,000 annually thereafter until the 15th year, when all the remaining bonds shall become due.

At present the company's business ranges from $180,000 to $225,000 a month, it is stated, and the committee estimates that about one-half of the net profits is eaten up by the lack of working capital. Through the recent removal of the New York City office and the consolidation of it with the factory in Niagara Falls, it is expected that an annual saving of $135,000 was effected.

NET PROFIT OF $1,115,600.

The annual report of the Indian Refining Company (of Maine) and subsidiary companies for the year ending Dec. 31, 1913, shows net earnings, after deducting all charges, of $1,115,601. The company set aside a general reserve of $610,465, equivalent to the year's first mortgage bonds sinking fund payments, against exhaustion of oil deposits and other contingencies. The balance sheet follows:

Assets.

Properties, pipe lines, storage tanks, real estate, selling stations, investments, etc....	$5,812,970
Inventories	830,369
Advances to salesmen and others	20,673
Accounts receivable	976,860
Bills receivable	13,943
Foreign accounts	78,660
Cash	675,332
Accounts in process of adjustment	450,000
Insurance fund assets	19,399
Sinking fund assets	62,271
Suspended organization expenses and unamortized flotation expenses	684,929
Profit and loss deficit, subject to shrinkage of deferred and suspended assets	2,714,879
Total	$12,340,286

Liabilities.

Capital stock outstanding	$6,000,000
Bonds	2,645,000
Second mortgage notes	1,923,600
Car trust obligations	395,000
Mortgage on Newark Meadows property	15,471
Vouchers and accounts payable	362,983
Bills payable	284,006
Interest accrued on funded and current liabilities	74,094
Unpaid and unclaimed dividends	10,268
Reserves	629,864
Total	$12,340,286

BUYS AMERICAN MOTORS PLANT.

The plant of the American Motors Company, Indianapolis, Ind., was sold to Samuel Winternitz & Co., Chicago, this concern making the highest bid of $110,000 at the sale held March 30. The sale is subject to the approval of Judge Albert A. Anderson in the United States district court in which the receivership and bankruptcy proceedings are pending. It is announced that it is the intention of the purchaser to resell the property piecemeal. No real estate was involved in the transaction.

LEASES ALCO PLANT SPACE.

The Singer Motor Company, the formation of which was announced recently by interests formerly identified with the Palmer & Singer Manufacturing Company, Long Island City, N. Y., has leased a large section of the service building in that city, owned by the American Locomotive Company, and at one time used by that concern as a service station for Alco cars. Experimental machines will be produced in this plant, pending the completion of arrangements for a factory site in that city.

KELLY-SPRINGFIELD TIRE PLAN.

A special meeting of the stockholders of the Kelly-Springfield Tire Company, New York City, has been called for May 4, to consider the plan proposed by the directors for retiring the four per cent. income debenture bonds of the company, by issuing therefor, par value, of six per cent. cumulative preferred stock, on the basis of one share of said stock of the par value of $100 for each $100 face value of said income debenture bonds.

The plan further contemplates the funding of the 78½ per cent. of dividends accumulated upon the present issue of six per cent. preferred stock, by the issuance of seven per cent. cumulative second preferred stock in payment therefor; each share of said seven per cent. cumulative second preferred stock, if authorized, to be convertible into one share of common stock, at the option of the holder thereof, at any time within 10 years from July 1, 1914.

The annual report of the company, as of Dec. 31, 1913, shows the following:

Assets.

Cash	$145,733
Notes and accounts receivable	535,121
Prepaid charges	33,979
Inventories	1,231,608
Plant, accounts, patents, trade marks, good will, etc.	7,888,618
Total	$9,835,060

Liabilities.

Preferred stock	$1,149,500
Common stock	4,000,000
Accounts payable	17,938
Reserve accounts	352,784
Accrued charges	14,037
Stock of subsidiary companies	500
Debenture bonds	2,850,500
Surplus	1,449,800
Total	$9,835,060
Gross profit	$1,264,567
Operating and administrative expense	716,189
Net operating income	$548,378
Other income	43,376
Total income	$591,754
Interest	32,210
Net profit, not including profit on goods sold but not delivered	$559,544

DIVIDENDS DECLARED.

General Motors Company Detroit; semi-annual, preferred, 3½ per cent.; payable May 1 to stock of record April 6.

United States Rubber Company New York City; quarterly, common, 1½ per cent.; first preferred, two per cent.; second preferred, 1½ per cent.; payable April 30 to stock of record April 15.

Chicago Pneumatic Tool Company, Chicago, quarterly, one per cent.; payable April 25 to stock of record April 15.

Willys-Overland Company, Toledo, O.; quarterly, common, 1½ per cent.; payable May 1.

QUOTATIONS ON AUTOMOBILE SECURITIES.

The condition of the stock market, as applying to automobile securities, during the past month is indicated by the tabulation below, which shows the high marks reached by the several securities listed each week, and in comparison with the conditions existing at the same time last year. For the most part the market has been fairly steady, the few fluctuations being largely the result of normal conditions. Strictly automobile stocks and those of tire companies have shown the most marked advances. When comparison is made with the prices prevailing in 1913, it will be noted that the market still continues to reveal a satisfactory situation.

PRICE SITUATION IN GENERAL MATERIAL MARKET.

The tabulation below presents the high and low prices for the commodities listed for each week during the past month, as well as the prevailing prices at the beginning and ending of that period, for purposes of comparison. The most marked change is in Kansas crude petroleum, which dropped 15 cents within a week, this applying also to Oklahoma crude, said to be due to over production.

TRADE INFORMATION EXCHANGE.

The Following Requests for Information, Presented by Members of the Trade Information Exchange, Offer Opportunities for Agents to Secure New Lines, for Manufacturers to Extend Their Representation and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. They Are Published Without Name or Address, Those Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for Forwarding.

Through the Trade Information Exchange, The Accessory and Garage Journal is in a position to supply at request a number of the best pleasure car and power wagon agency propositions that can be secured. These agency openings are for machines of all kinds, makes and prices. When writing, state preference, prices and full details concerning that which is desired. All correspondence will be treated as confidential. No charge will be made for the service rendered.

GASOLINE PLEASURE CAR AGENCIES.

10,053—Minnesota Dealer wants the agency for cars selling between $750 and $2000.

10,057—Ohio Firm is in the market to represent machines ranging in price from $750 to $1000.

10,059—New York House wants to secure the agency for pleasure cars listing in price from $450 to $1000.

10,061—Minnesota Firm is anxious to secure the agency for cars selling from $400 to $8000.

10,065—Michigan Firm is in the market to represent a line selling from $450 to $1500.

10,066—South Dakota Dealer wants to secure the agency for machines selling from $400 to $600.

10,069—Illinois House would represent a pleasure car selling from $350 to $1000.

10,072—Wisconsin Concern is anxious to secure the agency for pleasure cars selling from $1000 to $1050.

10,075—Ohio Company would consider an agency proposition for machines selling from $1285 to $2250.

10,078—Nebraska Dealer would like to represent a standard make of pleasure cars selling from $500 to $1500.

10,079—Kentucky Dealer is in the market to represent cars selling from $950 to $2000.

ELECTRIC PLEASURE CAR AGENCIES.

500—Ohio Firm would consider an agency proposition for electric pleasure cars selling from $290 to $3500.

505—Wisconsin Dealer is in the market to represent a line of electric pleasure vehicles ranging in price from $350 to $600.

510—Kentucky Company would represent a line of electric pleasure cars selling from $1200 to $3500.

COMMERCIAL CAR AGENCIES.

6090—Kentucky House wants to represent a line of gasoline commercial vehicles ranging in price from $1000 to $1900.

6093—Wisconsin Firm wants a light delivery truck selling from $600 to $1000.

6098—Iowa Concern is in the market to represent a gasoline commercial car selling from $750 to $2500.

CYCLECAR AGENCIES.

1743—New York Firm is seeking information regarding a first class line of cyclecars.

1745—Illinois House is interested in cyclecars and would take the agency for a line selling from $250 up.

1748—Wisconsin Dealer is in the market to represent a first class line of cyclecars selling from $300 up.

1751—Kentucky Concern wants to represent a cyclecar selling from $250 to $450. One having a four-cylinder, water cooled motor and standard tread.

1754—California Firm is in the market to represent a line of cyclecars selling from $350 to $400.

1758—Oklahoma House would represent a standard line of cyclecars ranging in price from $350 to $450.

ACCESSORIES, EQUIPMENT AND SUPPLIES.

300—Michigan House is in the market for asbestos, axles, bearings, bolts, brakes, cable, cylinders, discs, frames, guards, guns, hammers, headlights, horns, hose, hubs, lubricators, magnetos, metal parts, packing, paint, plugs, races, ratchet drills, sockets, speedometers, spokes, springs, stampings, starters, steering wheels, tires, tools, tops and parts, transmission, trimming, tubing, upholstery, washers, wash stands, waste, wheels, windshields and wrenches.

306—Kansas Firm is interested in bearings, cable, carburetors, gears, pistons and air tanks.

309—Wisconsin Concern wants asbestos, belts, bolts, carbide, carburetors, castings, cements, chains, coils, curtains, doors, fans, gasoline, gears, horns, jacks, lamps, levers, machinery, magnetos, maps, motors, mufflers, nuts, packing, patches, pistons, plugs, polishes, radiators, carbon removers, rubber, screws, shock absorbers, soaps, speedometers, spokes, springs, steel, steering wheels, switchboards, tanks, tape, testers, timers, tire accessories, tires, tools, tops and parts, transmissions, trimmings, trunks, tubing, valves, vulcanizers, washers, waste, wearing apparel, wheels, whistles, windshields, wire and wrenches.

316—Ohio Dealer is anxious to secure the following: Air compressors, batteries, bumpers, carburetors, headlights, horns, lamps, printed matter, shims, starters and vulcanizers.

317—Nebraska House is interested in the following: Air compressors, air pumps, axles, batteries, bearings, bulbs, camshafts, carbide, carburetors, cements, chains, charging apparatus, coils, commutators, cylinders, dynamos, fenders, gasoline gauges, graphite, headlights, hoists, hose, hubs, hydrometers, jacks, joints, knuckles, lathes, magnetos, motors, pinions, pistons, radiators, reflectors, rims, scrapers, tanks, tires, tools, transmissions, valves, vulcanizers, waste, wheels and windshields.

320—Missouri Dealer wants air compressors, air pumps, anti-rattlers, autogeneous welding equipment, batteries, bearings, belts, bolts, brakes, brushes, bulbs, bumpers, burners, cabinets, cable, caps, carbide, carburetors, cases, celluloid, cements, chains, charging apparatus, clamps, clips, coils, commutators, cones, connectors, cups, cutters, fans, fenders, fire extinguishers, gauges, generators, goggles, headlights, heaters, horns, hose, hydrometers, ignition, jacks, lamps, locks, lubricators, magnetos, nuts, packing, platinum, plugs, polishers, primers, pumps, radiators, reamers, reflectors, carbon removers, rims, rubber, scrapers, screws, shock absorbers, soaps, solder, speedometers, springs, starters, switches, tanks, tape, terminals, testers, timers, tire accessories, tires, tools, trunks, tubing, voltmeters, vulcanizers, waste, wearing apparel, windshields, wire and wrenches.

323—Virginia Firm wants speedometers for Ford cars and starters for Maxwell model 25 car.

324—Michigan House is in the market for bodies, brakes, castings, emblems, fans, fenders, frames, gears, knuckles, radiators, springs, starters, steering wheels, tanks, tubing, valves, wheels and windshields.

330—Illinois Company is in the market for air compressors, bumpers, carburetors, celluloid, chains, curtains, engines, headlights, horns, lamps, magnetos, motors, polishes, primers, reflectors, carbon removers, shock absorbers, soaps, speedometers, starters and vulcanizers.

333—Kentucky Firm is interested in the following: Air compressors, air pumps, axles, gaskets, jacks, mechanical starters, odometers, carbon removers, tops and parts, waste and wheels.

341—California House is in the market for air starters for Maxwell cars, model 25; also air pumps, anti-rattlers, asbestos, axles, batteries, bearings, belts, bodies, boilers, bolts, brakes, brushes, bumpers, burners, cabinets, camshafts, carbide, cases, castings, chains, charging apparatus, clamps, clips, cloth, clutches, commutators, couplings, curtains, cutters, cushions, cylinder machines, dashes, dimmers, discs, doors, drills, drums, dynamometers, fans, fasteners, fenders, fire extinguishers, forgings, frames, gaskets, gauges, gears, glass, goggles, grinders, guards, hammers, headlights, heaters, hoists, holders, horns, hose, injectors, jacks, jigs, joints, knuckles, lamps, lathes, leather, levers, locks, maps, metal parts, meters, measuring instruments, motors, nuts, odometers, paints, pans, patches, pedals, pins, pistons, plugs, polishes, pullers, pulleys, pumps, punches, racks, reamers, reflectors, carbon removers, rests, rims, rods, rubber, scrapers, screws, seachlights, seats, shims, shock absorbers, soaps, sockets, speedometers, spokes, springs, starters, steering wheels, steps, strainers, switchboards, switches, tanks, tape, terminals, testers, tire accessories, tires, tools, tops and parts, transmissions, trimmings, trunks, tubing, upholstery, valves, varnishes, ventilators, vises, vulcanizers, wash stands, wheels, whistles, windshields and wire.

TRADE LITERATURE WANTED.

201—Virginia House would like catalogues from manufacturers of automobile supplies, garage equipment and machine tools.

204—Michigan Firm wants catalogues and price lists from manufacturers of garage equipment, supplies and repair shop supplies.

Digitized by Google

GENERAL NEWS OF THE MANUFACTURERS.

The Hermann Engineering Company, Detroit, is now manufacturing a small four-cylinder motor to be used in small cars or cyclecars. The company is producing these motors in large numbers. The engine is block cast and is 2.5 by 4 inches. Being water cooled, it is stated that the weight can be reduced to 155 pounds. The normal weight is 170 pounds, the difference being due to the quantity of iron or aluminum optionally used.

The Electric Storage Battery Company, Philadelphia, in its annual report for the year ending Dec. 31, 1913, shows that the earnings on the outstanding shares of $16,094,425 common and $155,000 preferred stock amounted to $1,208,755, compared with $1,125,279 in 1912. The surplus warrants the payment of dividends at the rate of 7.44 per cent., as compared with 6.92 per cent. for 1912, a gain of .52 per cent. for the past year. The company is in a most prosperous condition.

The Dayton Rubber Manufacturing Company, Dayton, O., has increased its capital stock to $1,000,000, and is making extensive improvements. The company contemplates building a new and up-to-date plant.

The Newerf Rubber Company, Los Angeles, Cal., is erecting a large tire plant at Pico and Hope streets. This company is also building a large factory at Compton, a few miles from Los Angeles.

The H. W. Johns-Manville Company, New York City, has opened a service station at Milwaukee, Wis. It is located at 96 Second street and is another link in the chain of 49 service stations in the principal cities throughout the United States and Canada. The main garage floor accommodates eight automobiles at one time and is in charge of an expert mechanic. A large salesroom for the display of the J-M auto accessory line occupies a portion of the front of this building, while the upper floor is laid out as a stockroom of large proportions.

The Alter Motor Car Company, Detroit, has purchased a tract of land at Plymouth, Mich., and is erecting a factory on the site for the purpose of manufacturing the Alter cars. The main offices will be located at Detroit.

The Bosch Magneto Company, New York City, announces that the following motorcycles are regularly equipped with Bosch magnetos: Dayton, De Luxe, Eagle, Excelsior, Harley-Davidson, Iver Johnson, Jefferson, Michaelson, Minneapolis, Merkel, Pope, Reading-Standard, Thor and Yale.

The Packard Motor Car Company, Detroit, held a convention for its truck sales managers recently. Twenty-one managers of stations in different parts of the country attended. Hereafter sales of Packard trucks will be credited to the sales managers, and the winning truck manager and his organization will get a pennant and a $500 bull dog at the end of the season.

The Kellogg Manufacturing Company, Rochester, N. Y., has been forced to open a branch office in Detroit in order to meet the demands of motor car manufacturers. Charles S. Monson, formerly of Gray & Davis, is manager. The company is now presenting tire pumps in several models of one, two, four and six-cylinder types, so that manufacturers may be able to select from a variety of pumps at various prices.

The Mogul Motor Truck Company, St. Louis, Mo., held its annual meeting recently and elected the following officers: President, George C. Griffint; vice president, P. R. Walsh; secretary, John T. Hicks.

The American Bronze Company, Berwyn, Penn., is receiving bids on an enlargement to its works which will increase the capacity of the finishing department about 75 per cent., and increase the capacity of the foundry department about 40 per cent. The company has also just erected and equipped a complete testing and experimental laboratory where daily tests of the product, and research work are to be conducted. This department is in charge of Leighton Dunning, M. E.

The National Carbon Company, Cleveland, has purchased a large tract of land from the American Ever Ready Company, Long Island City, N. Y. The property has a frontage of 200 feet on Thompson avenue, 200 feet on Mott avenue and 600 feet on both Manley and Orton streets. The whole of the property will be covered by a large factory.

The Nyberg Automobile Company, Anderson, Ind., contemplates erecting a modern factory at Berlin, Ont.

The Sandusky Auto Parts & Motor Truck Company, Sandusky, O., was sold, under the orders of the federal court recently, to James J. Dauch, president of the Hinde & Dauche Company, for $78,000.

The Reeves Engineering Company, Mount Vernon, O., at a recent meeting, confirmed the action of the board of directors in selling the property to the Hope Forge and Machine Company, which will manufacture gas engines in addition to other machinery.

The Mercury Cyclecar Company, Detroit, held its annual meeting recently and elected the following officers: President, W. J. Marshall; vice president, H. A. Burnett; secretary and treasurer, R. C. Albertus.

The Studebaker Corporation, Detroit, during the month of February exported daily more than 40 Studebaker cars to its distributors in Great Britain, Europe, Australia, Singapore, South Africa and the Far East. An accompanying illustration shows a corner of shipping department in No. 3 plant of the Studebaker Corporation, Detroit. To facilitate handling, each car is placed in a crate, its wheels, top, windshield and general equipment being especially packed for the long journey.

A Corner in the Shipping Department of the No. 3 Studebaker Plant, Detroit, Showing Crew of Men Boxing the Automobiles for Export.

The Pittsburg Model Engine Company, Peru, Ind., has purchased the property of the Model Gas Engine Works, and is erecting a new factory at Pittsburg. The Peru plant will hereafter be operated as a branch of the Pittsburg plant. The officers of the new company are as follows: President, W. J. Strassburger; vice president, E. A. Myers; treasurer, J. F. Keenan; secretary, J. W. Littlejohn.

The Kline Motor Car Company, Richmond, Va., through a deal closed recently, will manufacture the whole of its product at the local plant in Richmond. James A. Kline has bought the plant of the Kirkham Motor Manufacturing Company, Bath, N. Y., at a receiver's sale. Included in the purchase is a lot of rough and finished material which will be shipped to Richmond at once so that there will be no delay in building the motors for the cars now under construction.

The Fedders Manufacturing Company, Buffalo, N. Y., has just brought out a radiator especially designed for Ford cars. The new radiator can be changed easily, it only being necessary to unbolt and remove the old radiator and attach the new.

The Midgely Tire & Rubber Company, Columbus, O., has purchased the plant of the Flint Glass Company at Lancaster, O., and intends to use it for a tire factory as soon as it is remodelled and new machinery installed.

The Peters Machine & Manufacturing Company, Cleveland, O., makers of transmissions, front and rear axles and steering gears, contemplates building a factory at 7320 Madison avenue. The building will be 80

Digitized by Google

by 209 feet and will be one story, of brick and steel. The foundation will be so constructed that a second story may be added as the business expands.

The Batavia Rubber Company, Batavia, N. Y., has just completed a considerable addition to its plant. The expansion has permitted the capacity to be increased from approximately 100 to 300 tires a day.

The Standard Motor Truck Company, Warren, O., has accepted plans for additions to its plant, which will enable it to greatly increase its output of one, 1.5 and two-ton trucks.

The Rex Motor Car Company, Ford, Mich., is erecting a factory in that place, where the company will build a low priced car, selling for about $400. It will be larger than a cyclecar and will have a front wheel drive. Charles H. Blomstrom is superintendent.

The Hawkins Cycle Car Company, Xenia, O., has decided to name the new cyclecar to be manufactured by the company the Xenia.

The Gurney Ball Bearing Company, Jamestown, N. Y., has opened a branch office at Detroit in the Dime Bank building. An engineering department has been established by Otto Bruenauer, who is the western sales manager.

The Detroit Pneumatic Tire Company, Detroit, held its annual meeting recently and elected the following officers: President, W. Wilson; vice president, Peter J. Jeup; secretary, T. S. Sprague; treasurer, W. C. Moran.

The Pennsylvania Shafting Company, Spring City, Penn., is planning to add to its list of products a new line, having acquired the exclusive rights to manufacture in the United States the Wright taper roller bearings for automobiles, motor trucks, etc. Additional equipment will be installed.

The Lyons-Atlas Company, Indianapolis, Ind., recently opened its handsome new display rooms at Pennsylvania and New York streets, where Lyons-Knight cars will be presented for the local trade. The accompanying

New City Salesroom of the Lyons-Atlas Company in Indianapolis, Ind., Decorated for "Opening Week".

illustration indicates the appearance of the building as decorated for the recent "Opening Week", which was celebrated by the Indianapolis dealers, in lieu of the annual automobile show.

J. P. Gordon & Co., Columbus, O., manufacturer of storm fronts, hoods, tops, etc., is now located at 280 North Fourth street.

The Universal Battery Company, Chicago, has purchased a factory building at La Salle and 35th streets, and will establish a plant for the manufacture of storage batteries.

The Holihan Manufacturing Company, Detroit, has taken over the plant formerly occupied by the Anguish Manufacturing Company and will make fenders, hoods, radiators, etc., for automobiles.

The Norma Company of America, New York City, makers of Norma ball, roller, thrust and combination bearings, announces the removal of its offices from 20-24 Vesey street to 1790 Broadway, New York City.

The Dayton Airless Tire Company, Dayton, O., will enlarge its plant.

The Way Muffler Company, Wilmington, Del., is considering plans to establish a factory in that city.

The Gadabout Motor Company, which brought out the Gadabout cyclecar in Detroit, has located at Newark, N. J., where a large factory, completely equipped, has been secured.

The Lozier Motor Company plants at Detroit and Plattsburg are working to full capacity, with orders for 5000 cars on hand for early production. It is expected by Mr. Pollard, manager for the company, that 40 cars a day will be the production within a short time.

The Hendee Manufacturing Company, Springfield, Mass., is now turning out between 200 and 220 motorcycles daily, and is planning for a minimum production of 50,000 cars this year. Sales are reported as being 75 per cent. more than a year ago at this time.

The Haynes Automobile Company, Kokomo, Ind., has arranged with H. T. Sheffield, Calgary, Alb., to handle the company's cars in that territory. Mr. Sheffield is a well known automobile dealer.

Henry H. Hyder, Riverside, Cal., is to open a new and modern garage at 446 West Eighth street. He will secure a car agency in the near future.

Brink & Payne is a new firm at Grand Rapids, Mich., which will engage in the automobile trimming business. The company will be located at 14 Island street.

D. C. Cain, Columbus, O., who is the agent for Ford cars, has added an electric charging plant to his taxi and repair service.

The Fisk Rubber Company, Los Angeles, Cal., is now located in its new home at 10th and Hope streets.

Edgar Updyke, Indianapolis, Ind., has moved to more commodious quarters at 343 North Capitol avenue. He is agent for the American car.

NEW BUILDINGS AND IMPROVEMENTS.

F. J. Connor, Turlock, Cal., has purchased a building on South Broadway and will remodel same for use as a first class garage.

The Slayton Auto Company, Slayton, Minn., is making extensive improvements to its garage.

Houson & Treichler, Wilson, N. Y., has purchased land and will erect a large and modern garage, costing $25,000.

Martin Swintek, Eddyville, Ia., is erecting an up-to-date garage on North First street. A general storage and repair business is to be conducted.

C. B. Wiggins, Champaign, Ill., has had his garage enlarged and improved.

Hake & Williams, Highland Park, Cal., is enlarging its garage at 6035 Pasadena avenue.

The Edwards Automobile Company, Plainview, Minn., is having extensive improvements made to its garage.

The North End Garage, Manchester, N. H., is having many improvements made. The company is agent for the Studebaker cars.

W. F. Heins, Carrollton, Mo., will erect an addition 50 by 75 feet to his already up-to-date garage on East Benton street.

W. A. Ritter, Wellsville, N. Y., is having his garage enlarged and improved. He has taken his son into the business.

Tucker's Garage, Baltimore, Md., is erecting a large addition to its building on 1722 West North avenue.

J. P. Wooten, Abilene, Tex., has had his garage enlarged and extensive improvements made. It is located at North Second street.

The Brooklyn Auto Garage, Brooklyn, Ia., is having an addition built to its modern garage. B. W. Sloan is the proprietor.

The Corson Auto Company, Springfield, Mass., has made extensive improvements to its building by the addition of a new service plant, which gives 10,000 square feet more of floor space, and enables the company to handle a full line of accessories and supplies, as well as Ford cars.

Albert Keiater, Scottdale, Penn., has purchased property on Stoner street and will erect a new fireproof modern garage.

The Elston Storage Company, Grand Rapids, Mich., is to build a large garage at Trowbridge and Bond streets, for the exclusive use of the company, to house its cars and motor trucks. The buidling, when completed, will be 40 by 100 feet, one story and of fireproof construction.

W. K. Henderson, Marshall, Tex., has taken an option on property there, and proposes to erect a large fireproof garage, costing $20,000, on the site. All modern machinery for repair work will be installed and a full line of automobile accessories will be carried.

M. P. Murnan, of the Murnan Taxicab Company, Columbus, O., has purchased a building at Broad and Mitchell streets, which will be remodelled into an up-to-date garage.

The City Garage, Marble Falls, Tex., is to erect an up-to-date building on the site of its present structure.

Fred H. Van Dorn, Red Bank, N. J., is having his garage remodelled.

The Motor Inn Company, Albert Lea, Minn., has purchased a lot with 26 feet frontage on Broadway upon which an addition will be made to its large building.

J. Van Benschoten, Poughkeepsie, N. Y., is having extensive improvements made to his garage.

Miller & Dietrich Auto Exchange Company, Point Marion, Penn., is to erect a large and modern garage and machine shop. Up-to-date machinery will be installed.

S. A. Wolldrick, Sleepy Eye, Minn., has purchased three lots on Main and Fourth streets on which he intends to erect a garage.

ADDRESSES OF GASOLINE CAR MAKERS—Continued.

Cartercar—Cartercar Co., Pontiac, Mich.
Case—J. I. Case Threshing Machine Co., Racine, Wis.
Chadwick—Chadwick Eng. Works, Pottstown, Penn.
Chalmers—Chalmers Motor Co., Detroit, Mich.
Chandler—Chandler Motor Car Co., Cleveland, O.
Chevrolet—Chevrolet Motor Co., Flint, Mich.
Coey—Coey-Mitchell Automobile Co., Chicago, Ill.
Colby—Standard Motor Co., Mason City, Ia.
Cole—Cole Motor Car Co., Indianapolis, Ind.
Continental—Martindale & Millikan, Franklin, Ind.
Corbitt—Corbitt Automobile Co., Henderson, N. C.
Correja—Vandewater & Co., Elizabeth, N. J.
Crane—Crane Motor Car Co., Bayonne, N. J.
Crescent—Crescent Motor Co., Carthage, O.
Croxton—Croxton Motor Car Co., Washington, Penn.
Crow Elk-Hart—Crow Motor Car Co., Elkhart, Ind.
Cunningham—J. Cunningham, Son & Co., Rochester, N. Y.
Davis—G. W. Davis Motor Car Co., Richmond, Ind.
Detrolter—Briggs-Detroiter Co., Detroit, Mich.
DeSoto—DeSoto Motor Car Co., Auburn, Ind.
Dispatch—Dispatch Motor Car Co., Minneapolis, Minn.
Dorris—Dorris Motor Car Co., St. Louis, Mo.
Empire—Empire Automobile Co., Indianapolis, Ind.
Enger—Enger Motor Car Co., Cincinnati, O.

SPECIFICATIONS OF 1914 SIX-CYLINDER CARS.

Key to Abbreviations: Cylinder type—I, valves in the head; L, L head; T, T head. How cast—B, en bloc; P, in pairs; S, separately; T, in triplets. Lubrication—C, combination; P, pressure; S, splash; SP, splash with pump circulation. Cooling—A, air; P, pump; T, thermo-syphon. Fuel feed—G, gravity; P, pressure. Carburetor—Car., Carter; Flet., Fletcher; Hol., Holley; King., Kingston; Mar., Marvel; May., Mayer; New., Newcomb; Pl., Plunkard; Ray., Rayfield; Sch., Schebler; St., Stromberg; Zen., Zenith; Zep., Zephyr. Ignition—A. K., Atwater Kent; Bos., Bosch; Br., Briggs; Conn., Connecticut; Del., Delco; Eise., Eisemann; King., Kingston; Mich., Michigan; Nat., National; Sim., Simms; Spl., Splitdorf; West., Westinghouse. Clutch—C, cone; CB, contracting band; D, disc; EB, expanding band. Transmission—F, friction; Pl., planetary; Pr., progressive; S, selective. Rear axle—D, dead; F, full floating; ½, semi-floating; ¾, three-quarter floating. Starting and lighting—G. & D., Gray & Davis; Leece-N., Leece-Neville; N. East., Northeast; Rush., Rushmore; Ward-L., Ward Leonard; West., Westinghouse. Driver—L, left; R, right; O, optional.

SPECIFICATIONS OF 1914 SIX-CYLINDER CARS.

Key to Abbreviations: Cylinder type—I, valves in the head; L, L head; T, T head. How cast—B, en bloc; P, in pairs; S, separately; T, in triplets. Lubrication—C, combination; P, pressure; S, splash; SP, splash with pump circulation. Cooling—A, air; P, pump; T, thermo-syphon. Fuel feed—G, gravity; P, pressure. Carburetor—Car., Carter; Flet., Fletcher; Hol., Holley; King., Kingston; Mar., Marvel; May., Mayer; New., Newcomb; Pl., Planhard; Ray., Rayfield; Sch., Schebler; St., Stromberg; Zen., Zenith; Zep., Zephyr. Ignition—A. K., Atwater Kent; Bos., Bosch; Br., Briggs; Conn., Connecticut; Del., Delco; Klee., Eisemann; King., Kingston; Mich., Michigan; Nat., National; Sim., Simms; Spl., Splitdorf; West., Westinghouse. Clutch—C, cone; CB, contracting band; D, disc; EB, expanding band. Transmission—F, friction; Pl., planetary; Pr., progressive; S, selective. Rear axle—D, dead; F, full floating; ½, semi-floating; ¾, three-quarter floating. Starting and lighting—G. & D., Gray & Davis; Leece-N., Leece-Neville; N. East., Northeast; Rush., Rushmore; Ward-L., Ward Leonard; West., Westinghouse. Driver—L, left; R, right; O, optional.

**Drives on four wheels.

ABBREVIATIONS:—Tires: Pneu, pneumatic; *, dual tread. Motor Location: Bet Seats, between seats. Cylinders: Sep, separately cast. Valve Location: Opp, opposite; S & H, side and head. Camshaft Drive: Gear, type not known; Hel'l, helical. Cooling: Thermo, thermo-syphon. Radiator Suspension: S & T, springs and trunnions. Ignition: Sing, single; Doub, double; 3-Pt, two point; Auto, automatic; Gov, governed; Opt, optional. Motor Lubrication: Spl-pres, splash and pressure. Clutch: Exp bd, expanding band; Con bd, contracting band.

** Drives on four wheels.

ABBREVIATIONS:—Tires: Pneu, pneumatic; *, dual tread. Motor Location: Bet Seats, between seats. Cylinders: Sep, separately cast. Valve Location: Opp, opposite; S & H, side and head. Camshaft Drive: Gear, type not known; Hel'l, helical. Cooling: Thermo, thermo-syphon. Radiator Suspension: S & T, springs and trunnions. Ignition: Sing, single; Doub, double; 2-Pt, two point: Auto, automatic; Gov, governed; Opt, optional. Motor Lubrication: Spl-pres, splash and pressure. Clutch: Exp bd, expanding band; Con bd, contracting band.

CHASSIS AND BODY EQUIPMENT DATA.

The Types of Bodies Supplied as Stock by Manufacturers Designated by Models, and the Available Loading Space of Each, with Factory Prices.

TO THE agent who is seeking to interest a business man in the purchase of a mechanical transport, information relative to the dimensions of the body equipment regularly supplied by the manufacturer is of material importance. In many instances it will be found that the body installation is the one deciding factor in making the sale.

Of course, it is well known that it is possible to secure special designs in many instances, but the accompanying table is presented as an authentic guide to the standard equipment supplied by the various makers. In some cases it will be found that the manufacturer offers an option, the inference being, in the absence of definite information to the contrary, that the builder is prepared to meet the requirements of the purchaser upon the presentation of the specifications desired.

In view of the importance of the body equipment in meeting the needs of the individual business, carriage makers and many of those connected with the automobile industry, as garagemen and repair shop proprietors, have found it advantageous to supply what might be regarded as custom made designs. In the event that the prospective purchaser may be considering an installation of this type, the agent or the body maker will find the information contained in this table and that on the preceding pages of inestimable value, as indicating the chassis dimensions and those of the standard bodies produced by the chassis manufacturer.

The arrangement of the tables may be commented upon, as being with a view to presenting the greatest amount of information in a little space. It will be found that the machines are not only classified alphabetically, but according to capacity, and the agent or prospective purchaser should have little difficulty in obtaining the desired data without loss of time. Full opportunity also is afforded for making comparison of all the vehicles produced in this country in a particular class. Chassis prices and the prices of standard bodies are included, thus presenting a complete compendium of reliable statistics concerning American commercial cars, insofar as it is possible to obtain this information.

SPECIFICATIONS OF 1914 ELECTRIC TRUCKS.

The following tabulation gives the principal specifications of the different models or types built by 16 leading manufacturers of the electric service vehicle industry:

Argo, American Electric Car Co., Chicago, Ill.
Baker, Baker Motor Vehicle Co., Cleveland, O.
Borland-Grannis, American Electric Car Co., Chicago, Ill.
Buffalo, Buffalo Electric Vehicle Co., Buffalo, N. Y.
Capitol, Capitol Truck Mfg. Co., Denver, Col.
Commercial Truck, Commercial Truck Co. of America, Philadelphia, Penn.
Couple-Gear, Couple-Gear Freight-Wheel Co., Grand Rapids, Mich.
Detroit, Anderson Electric Car Co., Detroit, Mich.
Fritchle, Fritchle Auto & Battery Co., Denver, Col.
GMC, General Motors Truck Co., Pontiac, Mich.
General Vehicle, General Vehicle Company, Long Island City, N. Y.
Huebner, O. E. Huebner, Brooklyn, N. Y.
Urban, Kentucky Wagon Co., Louisville, Ky.
Van Auken, Van Auken Electric Car Co., Connersville, Ind.
Ward, Ward Motor Vehicle Co., New York, N. Y.
Waverley, Waverley Company, Indianapolis, Ind.

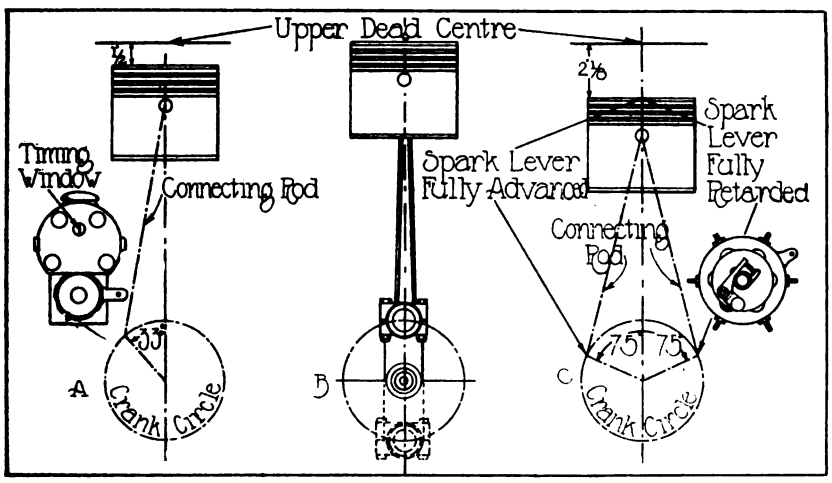
MAGNETO CARE AND ATTENTION.

The Work Necessary for Maintenance, Continued Service and Efficiency Described and Illustrated---Directions for Timing and Installations on 1914 Cars.

(By C. P. Shattuck.)

A REVIEW of the 1914 ignition system reveals a marked tendency toward single ignition, due to the general adoption of the motor starter, which relieves the motorist from cranking and the necessity of auxiliary or battery ignition for starting. Dual ignition (magneto and battery) is, however, to be found on many 1914 cars, and it is the exception rather than the rule that two sets of spark plugs are utilized.

While the experienced repairman is familiar with the principles of magnetos, there are many workmen who, while able to make minor adjustments, do not understand wherein the different makes vary in construction and operation, and it is for their benefit that the accompanying data and timing diagrams are presented.



Timing Diagrams, Showing Positions of Crank and Piston for Magneto Setting: A, Piston .5 Inch Before Top Dead Centre, Corresponding to 33 Degrees Crank Circle; B, Piston at Top Dead Centre, or Completion of Compression Stroke; C, Location of Piston with Spark Lever Fully Advanced and Retarded for Battery, Commutator and Coil Ignition.

Magnetos are classified under two general heads, low-tension and high-tension. The armature of the latter carries a primary and a secondary winding and no induction coil is required as is the case with the low-tension instrument, but with some types of true high-tension magnetos, a second or independent breaker mechanism is incorporated to interrupt the battery current as with the Bosch, Eisemann and Simms, for example.

The maximum efficiency or hottest spark is obtained from a magneto when its armature is in a certain position or when the greatest number of lines of force are cut, and as the primary current must be interrupted to induce a high-tension current in the secondary winding, it will be seen that the time of breaking of the low-tension current is a most important factor. This breaking of the low-tension current is accomplished by the interrupter mechanism, which is generally attached to and revolves with the armature shaft.

As it may be possible in the overhaul or in case of accident, that it will be necessary to remove the magneto, a knowledge of its setting will be of distinct value. This factor is determined by the engineers of the maker of the motors, and there are two methods, one by the position of the piston and the other by the flywheel or crank circle.

Accompanying illustrations show the progressive steps in disassembling, cleaning and adjusting 1914 types of magnetos. Wiring diagrams of four and six-cylinder motors are depicted with various firing orders, also clockwise and anti-clockwise rotations of the armature shaft.

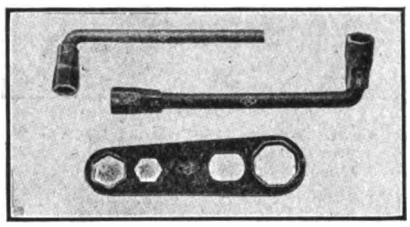
ACCESSORIES, SUPPLIES AND FITTINGS.

(When Writing to Advertisers, Please Mention The Accessory and Garage Journal.)

MOSSBERG FORD WRENCHES.

Constructed to Remove Nuts from Cylinder Head and Hub Cap.

The Frank Mossberg Company, Attleboro, Mass., is manufacturing a number of useful tools for the model



T Ford car, some of which are shown in an accompanying illustration, these including single and double-end cylinder head socket wrenches and a hub cap member. The single-cylinder head wrench is known as the No. 620, the double as No. 625, and either of these tools makes it a simple matter to displace the nuts and replace them quickly and properly. The difficulty of reaching these nuts with ordinary tools is well known to owners. The hub cap wrench is a particularly well designed and constructed tool. The single end retails for 32 cents, double for 40 cents and the hub cap wrench for 25 cents.

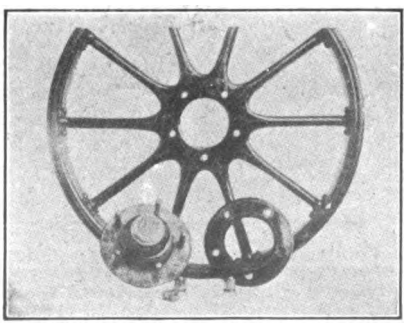
CROWN PRINCE WHEELS.

Demountable Design Constructed of Pressed Steel.

The use of pressed steel in motor car construction is becoming more general and a new application of the material, at least in this country, is noted in the Crown Prince pressed steel wheels, which are being marketed by Max Bacham, 845 Jefferson avenue, East, Detroit.

It is held that they are 200 per cent. stronger than wooden members, lighter, and considerably more durable. It is also claimed that much more tire mileage is obtained and that greater speed is possible. One of the qualities of the design emphasized is that it will not collapse; merely bend when subjected to severe stresses which would break wooden constructions. Being of metal the Crown Prince design cannot shrink or the spokes become loose.

The Crown Prince is a demountable wheel, and it is stated that it may be removed and an extra member is fitted in about one minute. It is retained by five nuts, which are displaced by a brace type of wrench. The wheels are equipped with either clincher or quick detachable rims and it is stated that they weigh only a few pounds more than the average demountable rim.



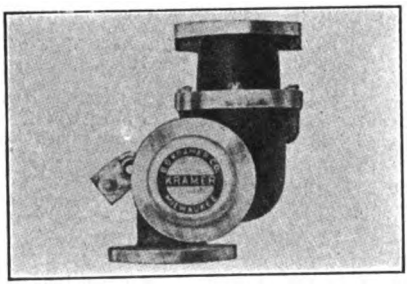
KRAMER GOVERNOR.

Automatically Controls Speed of the Gasoline Motor.

The B. G. Kramer Company, Milwaukee, Wis., is manufacturing the Kramer governor, which is especially for commercial vehicles, where it is desired to limit their speed to a predetermined number of miles an hour. The device is also applicable to pleasure cars. The instrument is designed to control and maintain a constant speed of an internal combustion engine by governing the velocity of the incoming gases.

It comprises a throttle, connected to a disc member, that is allowed to float under a constant spring tension in a tapered conduit, the tension of the spring determining the maximum motor speed. Upon the velocity of the incoming gases changing, due to variation in engine speed, the position of the disc in the conduit is affected. This results in altering the position of the throttle, allowing more or less mixture, as the case may be, to be fed to the cylinders, and as the condition may require.

An auxiliary control lever is provided, permitting the driver to obtain any variation of speed up to the

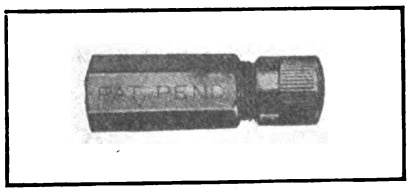


maximum afforded by the governor. It is pointed out that not only does the device make for efficiency and economy of fuel, but it cannot be tampered with.

SMITH EASY TIRE VALVE.

Replaces Usual Construction and Reduces Labor to a Minimum.

The Smith Tire Valve Company, box 1965, Boston, is marketing the

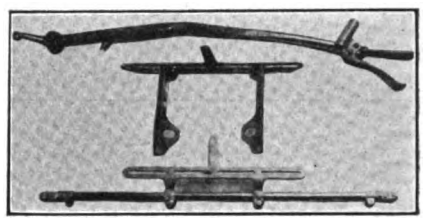


Smith easy pumping tire valve, which comes in sets of four and is moderately priced. It is easily attached to the valve stem, the plunger of which is removed, as the Smith replaces this member. One of the qualities of the Smith device is that the largest sized tire may be inflated with a minimum of effort with a hand pump. Another feature that will appeal to owners is that the Smith valve opens with a very slight pressure, permitting of utilizing the pump from the beginning to the end of the stroke. This makes for economy of time, in that it is figured that approximately 60 per cent. of the stroke is required to open the ordinary tire valve. The set retails for $2.

A. A. A. SPECIALTIES.

Include Headlight Rod, License Plate Holder and Brake Handle.

The A. Auto Appliance Company, 114 West Exchange street, Providence, R. I., is manufacturing three



new specialties for the model T Ford car. The one shown in the upper part of the illustration is an emergency brake pawl release handle, which is held to eliminate all vibration and noise and to improve the operation of the lever. The handle is one inch longer than the conventional member and is designed to fit the palm of the hand. It is made of high grade malleable iron and the release pawl is fitted with a heavy piano wire coil spring.

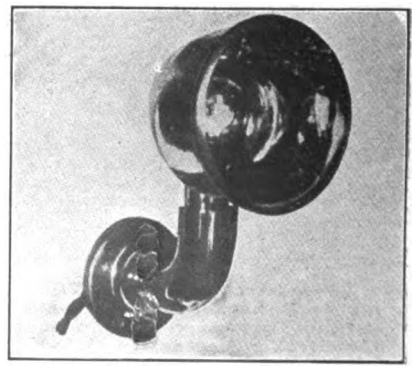
The device shown at the bottom of the illustration is an adjustable headlight rod, which prevents rattling of the lamps, and is also provided with a license number plate bracket. The holder is made of heavy brass tubing with bronze ends. The centre illustration depicts the A. A. A. number plate bracket.

PASCO ELECTRIC SIDE LIGHT.

Design Adapted to All Types of Cars and of Special Material.

The Portland Auto Specialty Company, 604 Fidelity building, Portland, Me., is marketing the Pasco electric side lamp, which is a very neat and compact design, intended for cars not equipped with electric lighting, although it is serviceable with any machine. It is designed to provide a large amount of light, a well designed parabolic reflector being employed.

The bulb is placed in a vertical position, a location making for maximum illumination. One of the qualities of the design is that the wiring is concealed, it being carried through the bracket, thence to the switch on the dash, etc. The lamps are constructed of a special combination silver metal, with polished nickel finished interiors and silver, brass or black enamel outside. They are listed to retail at $6 a pair, and the complete equipment includes two lamps, bulbs, wire and switch.

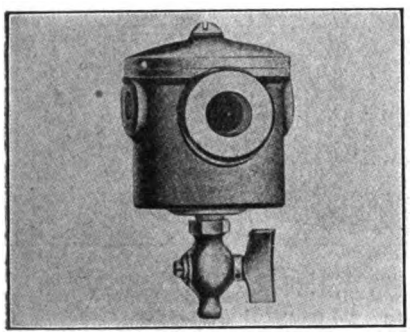


Digitized by Google

R. O. C. SUPERHEATER.

Raises Temperature of Fuel Before It Reaches Carburetor.

The National Economic Supply Company, 1777 Broadway, New York City, is marketing the R. O. C. Super-



heater, a device designed to raise the temperature of the fuel before it reaches the carburetor, and consequently, while it is in a liquid state. It is sprayed into the mixing chamber of the carburetor in the conventional manner but, as the gasoline is heated, it is obvious that it vaporizes readily.

The heat of the exhaust gases is utilized to raise the temperature of the fuel, the Superheater being connected in a branch line of the exhaust. The device is installed in the fuel line, consequently all gasoline passes through it before reaching the carburetor.

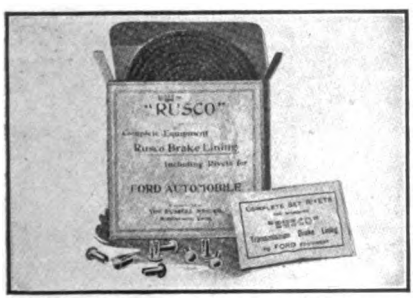
The advantages claimed for the Superheater are: Rapid vaporization of the fuel, a more homogeneous mixture in that precipitation is prevented, economy and less carbon. It is pointed out by the maker that low grades of motor fuel may be successfully used without carbonization. The R. O. C. Superheater is very compact, constructed of high grade material and retails for $5.

RUSCO FORD BRAKE LINING.

Constructed for Service Brake and Is Free from Metal.

While it is a well known fact that the output of the model T Ford flywheel generator is very large, the efficiency of the current producer is affected by metal particles, as these short circuit the dynamo. As the service brake band is located in practically the same housing, it is important that it should be lined with a friction material free from any metal.

The Russell Manufacturing Company, Middletown, Conn., is producing a special lining for the Ford brake, which is constructed of long fibre asbestos without wire or other metal. It comes in exact lengths for the brake, in a neat box, and sufficient rivets are provided for securing the material to the drum. The Rusco lining has a very high co-efficient of friction and sells for $1.

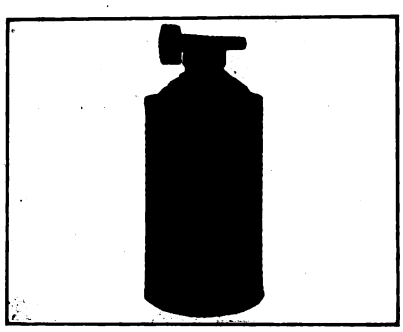


CARBONOX.

A Carbon Remover That Is Inexpensive and Practical.

Carbon is present in the cylinders of the internal combustion engine, the amount of the deposit depending upon the grade of lubricant and the quantity utilized. Formerly it was deemed necessary to dismantle the motor to remove it, but in these days it can be displaced easily. The Northwestern Chemical Company, Marietta, O., has been marketing for some time a carbon remover called Carbonox, a fluid, which is injected into the cylinders. The preparation does not dissolve the carbon, but attacks the charred oil that fastens the flakes of carbon to each other and to the cylinder, piston head, etc.

The method of use is simple. Carbonox comes in a can having a detachable spout and by means of the latter the fluid is injected through the spark plug opening. The result is that the carbon is loosened and is blown out in the exhaust. The amount present may be noted by holding a sheet of paper under the outlet. One of the qualities of Carbonox is that it provides an inexpensive method of

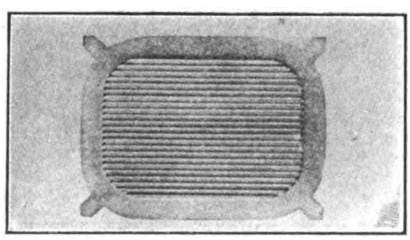


keeping the cylinders free from carbon, as the cost a cylinder is but a few cents. It retails for 75 cents.

PYRMA ALUMINUM HEEL PLATES.

Prevent Wear of Ford Floor Mat and Are Easily Attached.

After considerable service the rubber floor mat of the model T Ford car shows signs of wear where the



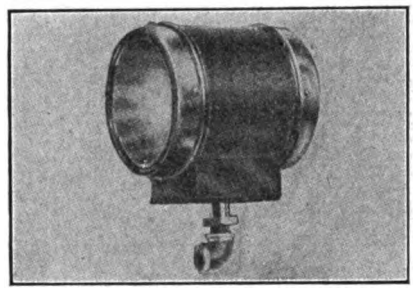
operator rests his feet when driving. This is due to placing the heels on the material and the feet in a position convenient to the pedals.

The Metallic Automobile Matting Company, Rochester, N. Y., is manufacturing the Pyrma aluminum heel plates for the Ford machine, and one of the qualities of the design is that the use of screws, rivets, etc., is eliminated when attaching the plates to the matting. The Pyrma is fitted with corners, which are bent down, placed on the mat and the positions of the holding members marked. Slits are then cut in the mat, the corner members inserted and bent to clinch. It is stated that the plates can be attached in three minutes. They are moderately priced.

AUTO FENDER SAFETY LAMP.

Shows a Double Green Light, Indicating Car's Position.

The Auto Fender Safety Lamp Company, Inc., Corinth, N. Y., is manufacturing the Auto fender safety



lamp, the utilization of which differs from conventional practise in motor car lighting. The lamp, which is an electrical unit, is placed on the left front fender, throws a double light, showing green to the front and rear, distinctly outlining the fender. This shows the position of the car to the driver approaching in the opposite direction.

The maker points out that the Auto fender safety lamp makes for safety in that it will show the driver of another car the position of the machine fitted with the device, and that the light may be distinguished easily for a considerable distance. One of the qualities of the light is that it has no glaring or dazzling effects even at close range. It is moderately priced; consumes but little current, and may be connected with the regular lighting system. It retails for $5.

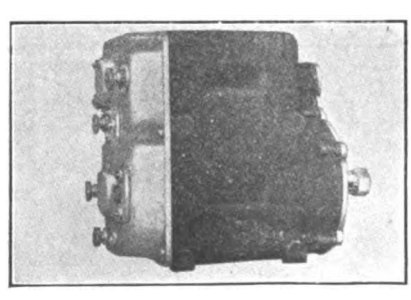
FISHER MOTOR-GENERATOR.

Lighting and Motor Starting System for Model T Ford Cars.

The Fisher Electrical Works, 1690 Larned street, West, Detroit, maker of electric lighting and motor starting systems, is manufacturing an equipment designed for service with the model T Ford automobile. It is a unit system, a motor-generator, and one of the qualities of the design is that it may be installed without machine work or drilling. It is a 12-volt, three-wire system, and six-volt lamps are employed.

The complete equipment comprises a silent chain, two sprockets, pulley for fan belt, zero line ammeter, starting and lighting switch, cables, adjustable supporting bracket, 12-volt 85 ampere-hour capacity storage battery and the motor-generator.

The unit is mounted on the left hand side of the motor, a special bracket being bolted to the power plant. Drive is by chain, a sprocket being fitted to the crankshaft. When current is led to the unit from the battery, it functions as a motor, rotating the crankshaft by means of the silent chain. Upon the motor starting, the current being cut out from the battery, the unit functions as a dynamo, charging the cells. The complete equipment retails for $120.

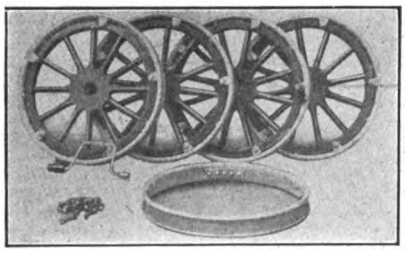


Digitized by Google

BAKER DEMOUNTABLE RIMS.

Designed Especially for Ford Cars and Come Painted.

The City Auto Tire & Supply Company, 1200 Huron road, Cleveland, O., is marketing Baker demountable



rims for the model T Ford car, and the design of these members is such that they may be applied readily. The equipment is shown in the accompanying illustration and comprises four wheels with rims attached and one extra rim. The new wheels are nicely painted, striped and varnished, and the usual brace wrench and 24 new hub bolts are included.

To attach the wheels the nuts and bolts of the old members are removed and the hubs driven out. The hubs are then inserted in the Baker wheels; the new hub bolts fitted and the nuts put on and tightened. The rims utilize 30 by 3.5-inch tires, the maker pointing out that this arrangement makes for convenience as well as tire economy. The wheels are hickory and the rims are made by the Universal Rim Company.

LIEBSON MOTOR STARTER.

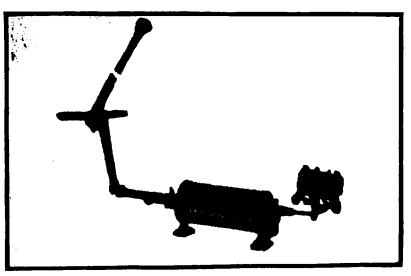
Employs Explosion of Gas to Rotate the Crankshaft.

The Liebson Self-Starter Company, 412 Georgia Life building, Macon, Ga., is marketing the Liebson self-starter, which is held to be adaptable to any make of car, does not require skilled mechanics to adjust it and weighs less than 10 pounds.

It differs from the conventional types of motor starters in that it is operated by compression and explosion, the principle involved being practically the same as that of an internal combustion engine. A lever operates a small brass pump, to which is attached a specially constructed carburetor. In moving the lever backward, fuel from the main tank is drawn by suction through the carburetor into the pump.

At the completion of the suction stroke, the proper amount of air is mixed with the fuel, and the next forward movement of the lever compresses the mixture, sending it through a pipe into a distributor having as many outlets as there are cylinders to the engine. An arrangement of valves actuated by cams makes for proper distribution of the gas, which is ignited by an electric spark.

A feature of the starter is that in forcing the charge into the cylinder there is sufficient pressure to start the crankshaft revolving, and the ignition is so timed that the explosion



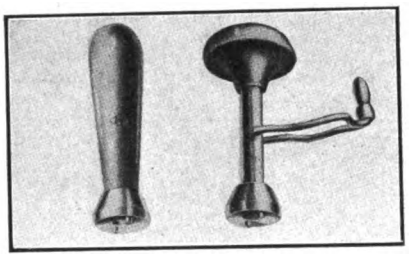
takes place after this movement has begun. From the above it would appear that the starter combines compressed air and explosion methods for starting. It retails for $60.

MOSSBERG VALVE GRINDERS.

Made in Two Styles, One Particularly for the Ford Motor.

The Frank Mossberg Company, Attleboro, Mass., is manufacturing two types of valve grinders for the model T Ford motor. That at the left in the illustration is termed the No. 600 and is designed after the repairman's favorite method of grinding valves, that of utilizing a rolling motion between the flattened hands. The Mossberg tool is so shaped that it fits the hand easily. It is of steel with wood handle and retails for 45 cents.

The Ford valve grinder No. 605 is constructed to permit of swinging a 90-degree circle, has a body of high grade metal and a wooden top. It is designed especially for the Ford

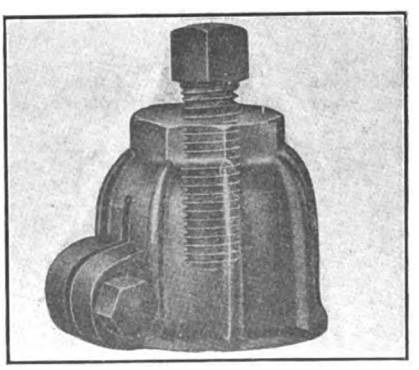


owner and is a very practical tool for the person who cares for his own machine. Both grinders are provided with pins which engage with recesses in the valve heads. The No. 605 retails for 50 cents.

MOSCO FORD WHEEL PULLER.

Provision Is Made for Variation of Treads of Hub.

Certain types of rear axles necessitate the use of a wheel puller when it is necessary to displace a wheel



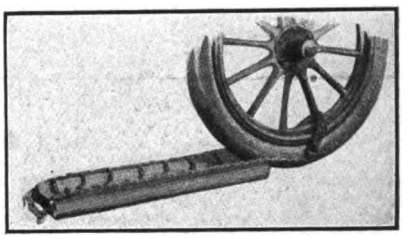
from the axle. The model T Ford car is one of these and, to enable the removal of the wheel without damaging it or marring the paint, the Motor Specialties Company, Waltham, Mass., has designed the Mosco wheel puller.

As will be noted by the accompanying illustration, it is made to be screwed on to the hub of the wheel, and a liberal sized set screw is employed to draw the wheel from the axle. One of the qualities of the Mosco is that a simple binding screw adjustment is incorporated. This adapts the device to any variation that may exist in the thread of the wheel hub, as well as eliminates danger of stripping. The Mosco is constructed of high grade material, nicely finished, and is inexpensive.

ROHE MOTOR CAR BLOCK.

Designed to Extricate Machine from Mud, Etc., by Own Power.

In the spring of the year, when visiting the country sections, and especially after a heavy fall of rain,



the driving wheels of the machine are likely to become mired unless one be careful. Usually the driver has to engage a pair of horses to extricate the machine when ordinary methods fail.

The Rohe Traction Block Company, Kenmard, N. D., is marketing the Rohe motor car block, which is designed to enable a car to extricate itself out of a mud hole or other place where traction cannot be obtained. The block is approximately 30 inches long and is placed, as shown in the accompanying illustration, with a chain attached to a strap. When power is applied the wheel in revolving draws the chain and block under it, thus providing a tractive surface.

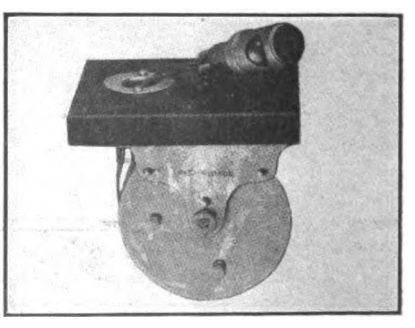
SMITH DUPLEX LAMP.

A Combination Dash and Inspection Light with Winding Spool.

Experienced motorists realize it is a dangerous proceeding to utilize a naked flame about the car when inspecting or making an adjustment at night when on the road or in the garage as more or less combustible vapor is present.

An electric lamp makes for safety, and among the late types of inspection members is the design marketed by J. W. Andrews & Co., Chicago. The Smith Duplex, as it is termed, is a combination unit, in that it combines the qualities of a regular dash light and a trouble lamp. The lamp is fitted into a socket in the dash, and, when the use of an inspection light is required, it may be removed easily and quickly. Sufficient length of high grade flexible cable is provided to permit use of the light at the rear of the machine if desired.

One of the features of the Smith Duplex is the method of carrying the cord. Instead of storing the equipment in the tool box as in conventional practise, the wire is wound upon a spool placed behind the dash. The winding member is neat and compact, as will be noted by the accompanying illustration. The Smith Duplex lamp comes complete with instructions for installing and the work is done easily. It retails for $4.75.

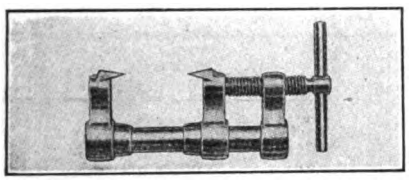


Digitized by Google

KNOWLSON SPRING SPREADER.

Chas. E. Miller Marketing an Inexpensive Practical Tool.

In these days of refinements more attention is being given to details formerly neglected. Few motorists



consider the springs as requiring attention, but it is a well known fact that these members should be lubricated; that is, the bearing surfaces of the leaves. The old method of cleaning and lubricating consisted of prying the leaves apart with a cold chisel or other convenient tool.

Chas. E. Miller, 97-103 Reade street, New York City, is marketing the Knowlson spring leaf spreader, which is easily operated and adjustable to any size spring. One of the qualities of the device is that it is not necessary to loosen the spring clips. As will be noted by the illustration, the tool has a screw member provided with a point. By rotating the screw the leaves are forced apart, enabling the introduction of the lubricant. The tool is made of drop forgings, nickel plated and polished, and weighs but 15 ounces. It can also be used to make a temporary repair to a broken spring. It retails for $1.50.

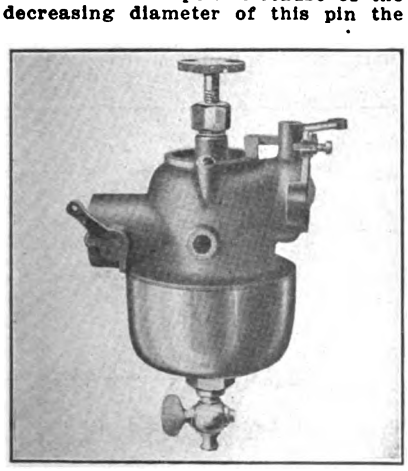
STEWART CARBURETOR.

Special Ford Design, Dash Adjusted and Heated by Hot Air.

The Detroit Lubricator Company, Detroit, manufacturing the Stewart carburetors, has developed a design for the model T Ford motor, which is held to be very efficient, easily installed, and to make use of the heat of the exhaust manifold. It is supplied either with thumb screw adjustment or to utilize the regular Ford dash adjusting rod.

The principle of operation of the Stewart is held to be entirely different from conventional types, and the maker states that the proportions of fuel and air are accurately determined, irrespective of the throttle opening. Use is made of a metering valve, which moves up and down, according to the suction of the motor, and it is held that the amount of fuel and air admitted to the mixing chamber increases or decreases in exactly the same ratio, obtaining the correct proportions at different speeds.

The lower end of the metering valve extends down into the gasoline and around a taper. Because of the decreasing diameter of this pin the higher the metering valve is lifted the larger will be the opening into the aspirating tube, and the more fuel will be drawn up. There is but one moving part, the metering valve.

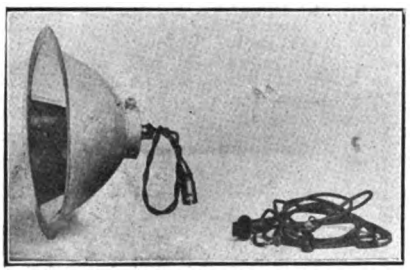


C-S FORD REFLECTORS.

High Grade Design with Many Practical, Useful Features.

The Culver-Stearns Manufacturing Company, Worcester, Mass., is marketing the C-S patented lighting outfit for model T Fords, which is designed to operate direct from the flywheel generator. The outfit consists of one pair of heavily silver plated reflectors, all necessary wiring, bulbs, switch, Ediswan connectors, etc.

One of the qualities of the design

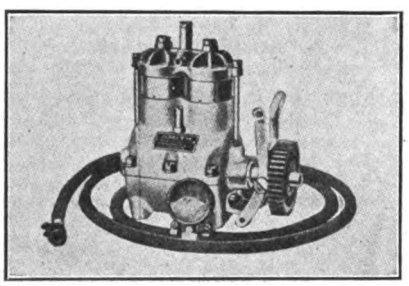


and one which will appeal to owners of Ford cars contemplating converting their gas lights into electric units, is that in the event a bulb becomes burned out or broken, it may be removed and a new one fitted without displacing the reflector. This is made possible by a patented device at the rear of the reflector, it being displaced by loosening a knurled nut and rotating the part slightly.

PERFECTION TIRE PUMP.

A Two-Cylinder Design with Complete Equipment.

The Smith Perfection power tire pump, marketed by the Smith Motor Devices Company, Dodgeville, N. Y.,



is a two-cylinder unit, with the cylinders made of a high grade brass tubing, tested to a capacity of 400 pounds to the square inch. The heads are of special steam bronze to reduce heating to a minimum. The best grade of aluminum is used in the upper and lower crankcases and the main shaft is of chrome nickel steel.

The bronze connecting rods are driven by means of an eccentric, a special drop forging, thus eliminating many parts. The die cast pistons have large wristpins, and compression packings prevent oil from reaching the air chamber. Gears, shifting lever, 15 feet of hose, pressure gauge and copper tubing are included.

Particular attention is called to the Classified Buyers' Guide in this issue. The concerns listed are wholly reliable and worthy. When writing advertisers please mention the Accessory and Garage Journal. Also kindly mention the Accessory and Garage Journal when writing for trade discounts and particulars of machinery, tools, supplies, equipment, accessories, etc.

UNIVERSAL TAIL LIGHT.

Electric Lamp, Solderless and Made in Two Styles.

The Combination Tail Light Company, 954 Tremont street, Boston, is manufacturing an attractive, compact

electric tail light termed the Universal. It is fitted with an ingenious device which throws a soft, strong light over the entire surface of the number plate, and the maker lays emphasis on this point, stating that glaring is eliminated, and that the illumination conforms with the laws. The lighting device is attachable or detachable instantly, overcoming troubles in replacing a damaged bulb with a new one. Any bulb with an Ediswan base and not more than 1.25 inches in diameter may be used.

One of the features of the design is the use of a combination socket, which will fit the bracket of any car. Soldering has been eliminated in the Universal, all parts being electrically welded, making for durability. It is made in two styles, C, having a steel back, nickel and enamel top and finished in nickel and black outside. The retail price is $5 and $4 respectively.

STANDARD AUTO-THERMO.

Indicates Temperature of Motor by That of Cooling Fluid.

The Standard Thermometer Company, 65 Shirley street, Boston, is marketing the Standard auto-thermo, which is a neat, compact device fitted to the radiator cap and is adapted for attachment to either the hinged or screw cap. It is fitted by boring a hole in the cap, inserting the extension and tightening a nut on the last named member. The part extending into the radiator actuates a hand which moves over a calibrated dial, the degree and direction of movement being influenced by the temperature of the fluid of the cooler, or, in other words, the motor.

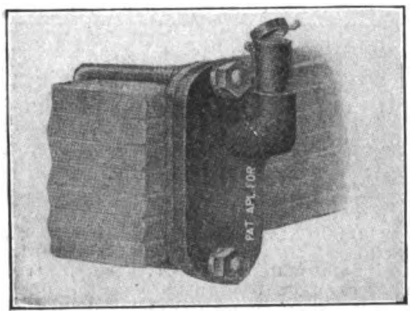
The hand moves across transparent zones, and temperatures equalling that of freezing, maximum motor efficiency and steaming are shown. When the hand is in a vertical position, it indicates "Safe"; that is, the cooling water is at a temperature when the motor is operating at its maximum efficiency insofar as temperature is concerned. The auto-thermo comes in nickel, brass or black enamel and retails for $5.

Digitized by Google

GRUS SPRING OILER.

Designed to Provide Constant Lubrication of Leaves.

Several designs have been marketed for forcing apart the leaves of the springs so as to lubricate the



bearing surfaces, but a new method of reducing friction is noted in the device being manufactured by Wm. Grus, Jr. & Co., 5213 Wayne avenue, Chicago. The Grus patent leaf spring oiler is attached permanently to the spring, being fitted about one-third the distance from the centre, as shown in an accompanying illustration.

The plate, which is bolted to the side of the springs, is provided with an oil receptacle, which has an opening registering with the springs, and the maker states that the lubricant will automatically find its way to the bearing surfaces. The oiler proper is provided with a cap, which excludes all foreign elements. The device is made in varying sizes for different springs and sells for $1.

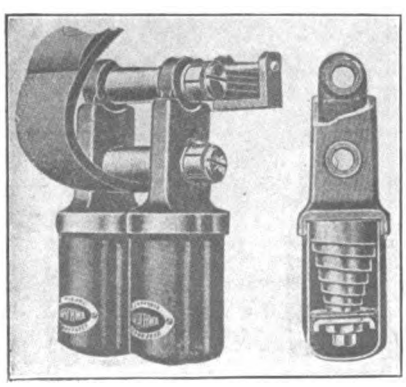
G-S SHOCK ABSORBERS.

Combine Spring and Compressed Air Principles.

The G-S "Geschwa" shock absorbers are marketed by the Geschwa Importation Company, Hartford, Conn., and road shocks, vibration, etc., are compensated for by the combination of a spring and novel use of the compression of air. The spring employed is not an ordinary coiled member. It is a flat, highly tempered spring, coiled in a spiral conical form, as shown in the smaller illustration, and it is stated that when it is compressed it forms a pneumatic air cushion, eliminating shocks, also controlling the rebound of the car springs.

An air chamber is provided at the bottom, this governing the spring suspension of the machine, and the compartment has a relief to equalize upward and downward movement. The arm attached to the shock absorber spring moves in a housing, and is secured to the lower spring when three-quarter elliptics are used, for example, while the top car spring is secured to a bolt extending through the housing of the absorber.

It is claimed by the maker that the

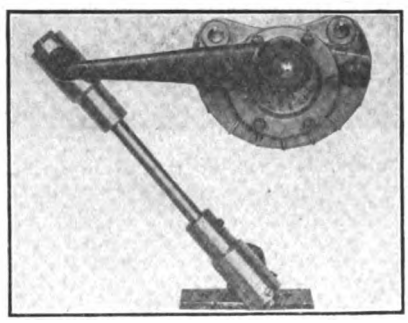


G-S can be completely telescoped without affecting flexibility or efficiency, and that the design is unbreakable. It is also stated that it can be attached or removed with slight expense, and that it may be adjusted to varying loads. The G-S absorbers are sold with a guarantee for one year, and are made for varying spring suspensions and different makes of machines.

HERZ SHOCK ABSORBER.

Utilizes Swinging Movement of a Steel Lever.

Herz & Co., 245 West 55th street, New York City, has brought out a shock absorber which is held to be a distinct departure from previous designs. In the Herz the resistance necessary for the absorption of the spring vibration is produced by the swinging movement of a steel lever in a specially compounded substance. The maker states that the design is simple and that there is nothing to get out of order. The cast iron box containing the substance also retains

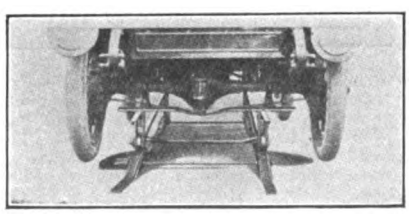


the bearings for the inside lever, and is secured to the frame of the car. The outside lever with a ball on its end is attached to a rod having a socket end, and the rod in turn is secured to the spring of the car. It is stated that the Herz absorber has been in service abroad for the past four years. It is guaranteed.

CADY AUTO-JACK.

Automatically Raises and Lowers the Automobile.

The Cady Auto Appliance Company, 755 Central avenue, Cleveland, O., is manufacturing the Cady Auto-Jack,



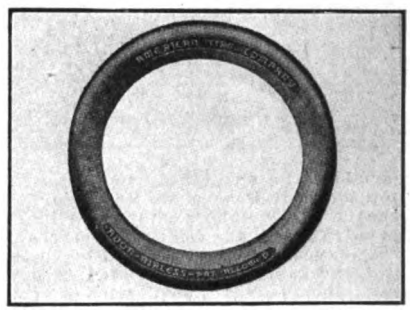
which is stated to be automatic in its action. It lifts all four wheels of the machine 1.5 inches clear of the floor without effort upon the part of the owner of the machine other than driving the car upon it. A small lever, easily operated, permits of removing the car from the jack when desired, and the maker states that a child can do the work.

The Cady Auto-Jack is constructed of steel and finished in aluminum. It is guaranteed against any defect in workmanship or material, and weighs, crated for shipment, 200 pounds. It retails for $30 and the maker points out that it will not only save its cost in tire economy, but it will be found to be decidedly useful in the repair and maintenance of the machine.

AVON AIRLESS TIRE.

Wool Felt Employed as a Material—Many Advantages Claimed.

The American Tire Company, Montello, Mass., is manufacturing the Avon airless tire, which is designed



for light and heavy trucks. It is made in both flat and round treads. The tire is the result of a series of experiments with wool felt by the inventor, and it is stated that none of the desirable resiliency of the pneumatic is sacrificed.

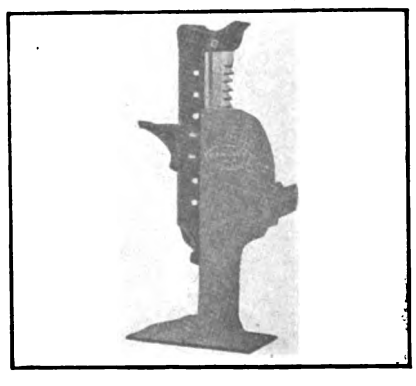
It is pointed out that the material utilized in the Avon tire can be subjected to enormous pressure without affecting it, as it will quickly resume its normal form. Among the advantages of the construction emphasized are: Creeping is eliminated, internal friction avoided and saturation prevented. It is obvious that wool felt is not affected by punctures nor susceptible to blow-outs. For the present manufacture of Avon tires will be confined to commercial vehicles.

BARRETT 1914 JACK.

New Design Has Several Practical Features of Interest.

The Duff Manufacturing Company, maker of the Barrett automobile jacks, has brought out a new design, termed the 1914. One of the qualities of the new jack is the casting integral with the malleable iron top, an adjustable lifting member, which is of advantage in that it permits using the jack where the height is less than the maximum of the regular top. The smaller top member slides and is secured by bolts. This construction adapts the jack to all types of machines.

The pawl points are machined all around, meshing perfectly, making for a large factor of safety, efficiency and convenience. The pawl bearings are also machined. The bearings, gears and racks are constructed of a high grade carbon steel and each jack is rigidly tested before leaving the factory. A tire tool lever is supplied with all the new styles marketed by this concern.

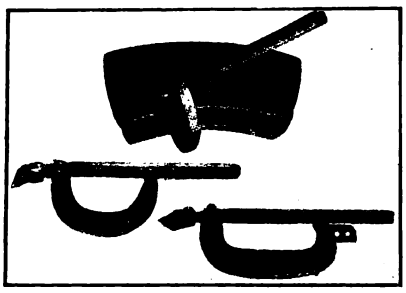


Digitized by Google

HOLDEN TIRE TOOLS.

Designed for Clincher Demountable Rims and the Ford Car.

The Holden Manufacturing Company, St. Paul, Minn., is producing the Holden tire tool, which is made



in standard and a special form, the latter for the model T Ford machine and shown in the lower right hand corner of the illustration. The Ford tool is made for three and 3.5-inch clincher tires.

The standard is designed especially for clincher demountable rims, and it is stated that it will loosen a shoe easily, no matter if it be frozen. By turning the handle outward just past dead centre it locks, holding the bead inward, facilitating removal when the rim is split crosswise. It is adapted to 3.5 and five-inch tires, is finished in aluminum and weighs but two pounds. The Standard sells for $1.25.

J. & B. FUEL SAVER.

Dash Device Automatically Controlling Extra Air to Intake.

As the efficiency of the motor largely depends upon the correct proportions of fuel and air, a number of devices for regulating the supply of air from the seat have made their appearance during the past year. The principle involved is that of admitting atmosphere when it is supposed that too large a quantity of gasoline is emerging from the jet of the carburetor, and when the motor is attaining high speeds.

The majority of the devices marketed provide for manual control; that is, the operator of the car utilizes his judgment as to the amount of air required. The device manufactured by Jones & Buckoke, 1413 Michigan avenue, Chicago, differs from conventional practise in that the air is admitted automatically and according to the speed of the engine.

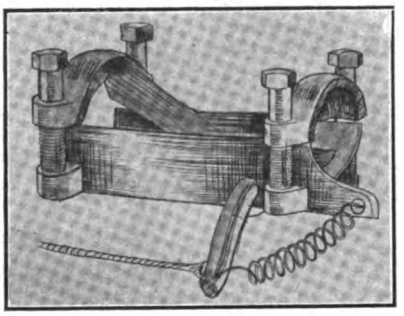
The J. & B. automatic fuel saver is located on the dash and is connected by a flexible tube to the intake manifold between the carburetor and the cylinders. The dash device contains an air valve, which opens and closes according to the varying suction which changes with the speed of the engine.

When the motor is running slowly the valve is closed, but as the speed picks up, a valve member is automatically released from its seat, and allows air to be drawn into the intake manifold, the extra atmosphere being in proportion to the requirements of the engine. It sells for $15.

X L CUT-OUT.

Cuts Out Exhaust by Means of a Movable Tongue.

The Auto Improvements Company, Bristol, R. I., has brought out a new design of muffler cut-out for model T Ford cars, although it is stated that it will be constructed for other makes. The maker claims that it is superior to the conventional types in that it cuts out all of the exhaust by means of a tongue. The last named member, when raised by a pedal, forms a partition in the exhaust line, forcing the gases to pass out through a rectangular opening. The absence of back pressure when not in service is emphasized by the inventor, also



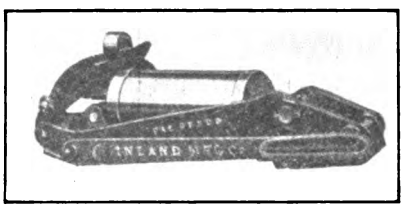
ease of attachment. In the illustration the tongue is shown raised. It retails for $3.

INLAND HAND PUMP.

Compact Design for Attachment to the Running Board.

The Inland hand pump is manufactured by the Inland Manufacturing Company, Chicago, and one of the features of the design is its compactness. It is 15 inches long when folded; is designed to be attached to the running board by a wing nut arrangement, and is operated by a lever, which also folds.

The cylinder and base are constructed of brass, the former having a bore of three inches and a stroke of of 5.625. The piston is of cold rolled



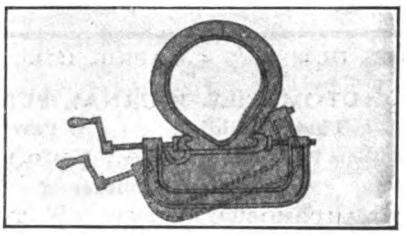
metal and is equipped with a leather packing. One of the qualities of the design emphasized is that it will not heat in service, a draught of air flowing through the cylinder at each compression stroke, it is stated. The pump comes complete with eight feet of high grade hose and a pressure gauge.

The Accessory and Garage Journal invites manufacturers, distributors and agents to co-operate in presenting to its readers new accessories, equipment, etc. The forwarding of suitable illustrations and data, does not place the contributor under any obligations. The editor of this department, however, reserves the right to discuss the practicability of the article submitted. The name of the manufacturer and street address should accompany all data, also the retail price.

CALNAN TIRE REMOVER.

Is Adapted to All Types of Tires and Rims and Ford Shoes.

James P. Calnan, West Upton, Mass., is manufacturing the Calnan tire remover, which is held to be a



very practical tool in that it is designed to loosen any type of tire or rim. One of the qualities of the construction emphasized is that it will fit all sizes.

The tool is operated from the front of the wheel, either when removing or replacing a casing, and it locks automatically, enabling the user to employ both hands if necessary. The equipment also includes a tire removal tool (not shown), which is provided with a ball end that is placed on the ground, and the other end is inserted between the shoe and the rim. By turning the wheel the tool separates the casing from the rim. The equipment sells for $2.25.

AUTO PARTS RADIATOR.

V Shaped Honeycomb Design for Model T Ford Cars.

The Auto Parts Company, Chicago, is marketing a special design of radiator for the model T Ford automobile. It is of the V shaped design, and is stated to be a genuine honeycomb type. It is constructed to replace the regular cooler and without any alteration or special fittings. It is made with two finishes, nickel plate and brass, the latter listing $2 less. The nickel plate retails for $35.

The company is also marketing the P. G. N. headlight, which provides three lighting equipments in one.

HANS TANK GAUGE.

Indicates Supply of Fuel by Magnet Principle.

The Hans Motor Equipment Company, La Crosse, Wis., manufactures a large number of designs of fuel gauges, one of which, a tank design, is shown in an accompanying illustration. It is mounted with its float chamber directly in the tank, the dial case being the only part visible. The type is designed for machines where the fuel container is very accessible.

The indicating hand moves over a calibrated dial, and is operated by a magnet mounted behind the dial. The working parts are enclosed in an air tight and dust proof chamber, and the maker states that the construction is leak proof. All of the Hans products are carefully tested before shipment. The gauge retails for $12.

THE ACCESSORY AND GARAGE JOURNAL

VOL. III. APRIL, 1914. NO. 12.

AUTOMOBILE JOURNAL PUBLISHING CO.
Times Building Pawtucket, R. I.
William H. Black, Treasurer. D. O. Black, Jr. Secretary.
Publisher of
THE AUTOMOBILE JOURNAL THE MOTOR TRUCK

Offices in New York, Chicago, Detroit and Boston

SUBSCRIPTIONS.

The United States and Mexico, the year, $2 in advance; Canada and Foreign Countries in Postal Union, the year, $3 in advance. Twenty cents the copy.

CONTRIBUTIONS.

Anonymous communications not considered. Correspondence on subjects relating to the motor industry and the trade will receive attention. Stamps must be enclosed to insure return of unsolicited contributions.

ADVERTISING.

Information supplied at request.

Advertising Copy for the ACCESSORY AND GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

INCREASED FINANCING.

According to statistics compiled in financial circles, the demands for new capital by American railroads and industrial corporations during the month of March totalled $129,835,000, as compared with $118,449,600 during the same month of 1913. This indicates a substantial increase, although, as usual, a large amount was raised to meet maturing obligations. It is also stated that the maturities for April will total $61,847,000, as against $53,283,000 for March.

In this connection it may be added that money is not only easier, but much cheaper than it was a year ago. This has the effect of increasing the investment demand for bonds somewhat, although confidence is held not to have been revived sufficiently, as yet, to encourage offering bonds at a price which is regarded by railroad managers, for instance, as a fair rate of interest. In consequence, resort was again made to short term notes, and most of the increase in financing during March is held to have been in that class of securities.

Because of the fact that commercial money is plentiful and interest rates are on a lower level than they were a few months ago, there is a general feeling throughout the country, perhaps more noticeable in the West than in the East, that business confidence is improving rapidly. Money for permanent investment is becoming more abundant, and this is reflected, particularly on the Pacific Coast, in a marked improvement in the bond market. Bank deposits throughout the East have shown a decided upward tendency during the past month. In all sections there is a growing disposition on the part of states, counties and municipalities to borrow as heavily as their credit permits, creating a condition in which all the liquid capital from the accumulation of industry and thrift is quickly and constantly absorbed. This situation, and the exceptionally good crop outlook throughout the entire country, appears to warrant the statement that business conditions are gradually assuming normal proportions.

AUTOMOBILE COACH MAKER.

Within the past few months the number of concerns heretofore engaged in the production of carriages and wagons who have seen fit to announce their withdrawal from that field and their intention of devoting their efforts to satisfying the demand for distinctive automobile bodies, has been such as to merit comment. In some instances it has been noted that the firms taking this radical step have been among those with enviable reputations in the industry which they were leaving—concerns with long, successful careers behind them.

The production of specialized body designs really had its inception early in the history of the motor truck. Soon after the advent of the practical mechanical transport, it was demonstrated that a custom made installation often was necessary in order that the chassis might be enabled to serve its purpose most fully in a given business.

It would appear that the carriage builders seek to carry this proposition a step further, so that it is not too much, perhaps, to announce the arrival of the American automobile coach maker, as those engaged upon this class of work are termed abroad. That the field presents interesting possibilities to these men seems evident, else they hardly would have abandoned the positions in which they had become so firmly entrenched. Incidentally, their action offers a timely comment upon the growing importance of the automobile industry.

Success is won in any field of endeavor only by hard work and close application to details. The man who studies local conditions and places his business on a business basis is bound to succeed in selling automobiles.

ADDS MOTOR CAR DEPARTMENT.

Reduced Insurance Rates Responsible for Increased Interest in Automobile Fire Extinguisher.

When it became known recently that the leading fire insurance companies had granted a substantial reduction in their rates wherever the automobile or motor truck was equipped with an approved fire extinguisher, the Pyrene Company, 1358 Broadway, New York City, with New England branch at 176 Federal street, Boston, found a most gratifying increase in the interest among motor car owners in providing protection against loss by fire. The business of this company in Pyrene fire extinguishers for automobiles has grown so rapidly as a result that the officers have decided it is advisable to establish a special motor car department, in order that the needs of automobile users may be studied and their interests properly served.

This department is now in operation, with C. Louis Allen, for the past year New York manager of the Service Recorder Company, in charge. It will be the aim of this department to act in the nature of a general information bureau and counsel on all matters pertaining to automobile fire insurance, and those who have to do with such machines are cordially invited to make use of this service, which is offered without charge, at all times.

FEATURES SHOP COURSE.

Boston Auto School Is Calling Attention to the Facilities for Special Instruction Offered by It.

The Boston Auto School, 222 Columbus avenue, Boston, Mass., is directing particular attention to its shop course, in a neat little booklet issued recently. An interesting feature of the course is the opportunity afforded for a thorough training in magneto and carburetor work.

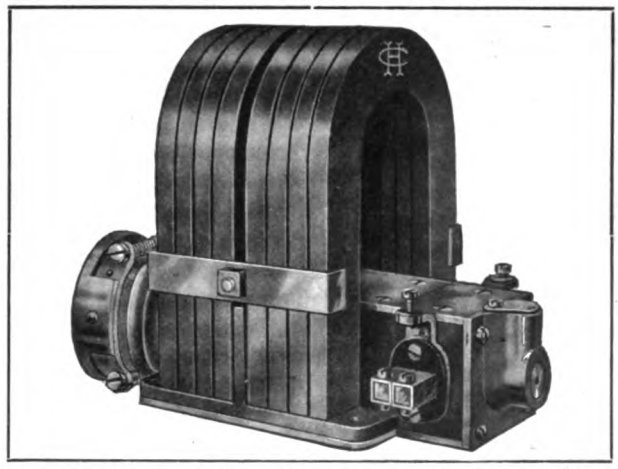
The company which maintains the school, Bonney & Greig, operates a repair shop, in which the students receive instruction while working on cars brought in for repairs, under the guidance of expert mechanics. In addition, the company has a service station for Rayfield carburetors and is continually installing this make of instrument on cars, as well as a department for overhauling magnetos and ignition systems. Instruction in these departments is free to those taking the shop course.

NEW LIGHTING GENERATOR.

Holtzer-Cabot Electric Company Marketing Permanent Field Type of Magneto Applicable for Automobiles.

The Holtzer-Cabot Electric Company, Brookline, Mass., is manufacturing what is termed the J S type of magneto, which is an electric generator of the permanent field type. Its output is 5.5 amperes continuously at 6.5 volts, which is high for the size of the instrument, which is not only compact, but is constructed with the same high grade material and workmanship for which the product of this concern is noted. One of the qualities claimed in the generator is that, on account of no energy being required to excite field windings, its efficiency is very high. It will generate equally well when run in either direction.

It is not claimed that it is universally applicable for motor car lighting, but is adaptable under the following conditions of service: For the large car, the owner of which prefers gas headlights and the use of electric side and tail lights, interior lighting, horn and battery ignition; for the complete lighting of large cars that are operated principally in the daytime; for the machine usually driven in a city where the use of headlights is restricted; for the complete lighting of small cars with headlights utilizing from 12 to 16 candlepower; for the



Holtzer-Cabot J S Type Magneto for Electric Lighting and Battery Charging.

earlier types of machines without magneto ignition, to supply the ignition current, side and tail lights, horn, etc.; for operating headlights without a battery connection or switches.

The magneto is provided with a governing pulley which prevents excessive armature speeds, and a six-volt, 60 ampere-hour battery is connected to the generator through a special reverse current cut-out and an ammeter. It is stated that the last named need not be of an expensive type, as its purpose is to indicate the current consumption of the lamps, and any decrease in the output of the dynamo due to the belt becoming loose or brushes becoming worn or stuck.

The magneto is mounted on a bracket and drive is taken by round belt from any convenient driving member such as the fan pulley, for example. The wiring plan is simple and the equipment is moderately priced. The Holtzer-Cabot Electric Company issues a booklet which gives in detail the equipment, and it will be mailed free on request.

OUTLOOK IS VERY BRIGHT.

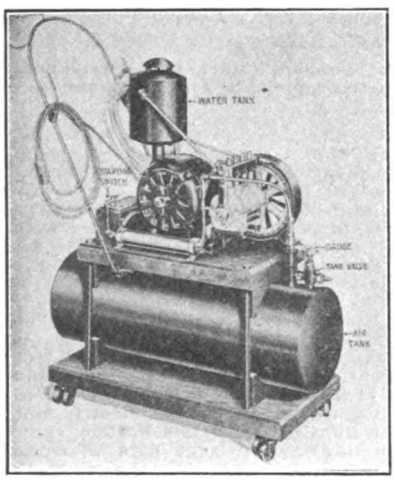
Gramm-Bernstein Company Declares Semi-Annual Dividend of 3.5 Per Cent. and Sales Show Increase.

The Gramm-Bernstein Company, Lima., maker of B. A. Gramm's trucks, has declared its regular semi-annual dividend of 3.5 per cent., which was payable April 1. According to reports from the factory its affairs are in a decidedly prosperous condition, as indicated by the number of trucks sold, and the outlook for the coming year is exceedingly bright. General Sales Manager W. H. Moore is visiting the agents in the South and reports that the increase in sales in that territory will in all probability be very large.

Digitized by Google

MACHINERY, TOOLS AND EQUIPMENT.

THE Kellogg Manufacturing Company, Rochester, N. Y., maker of the Kellogg four-cylinder air pumps, is marketing the Kellogg electric motor driven garage pump shown in an accompanying illustration. As will be noted, the pump, electric motor and storage tank are mounted as a unit.



Kellogg Electric Motor Driven Garage Pump.

The pump is a heavy duty, water jacketed four-cylinder unit, powerful and compact, and may be connected direct to the tire or to the tank, where air can be stored at a pressure of 150 to 200 pounds a square inch. A water tank is provided, the fluid circulating around the head of the cylinders of the pump, thence to the reservoir on the thermo-syphon principle. The bearings of the pump are of babbitt and the connecting rods of bronze. The pistons are of anti-friction metal, made leak proof by the company's exclusive cup washer construction. The cams are drop forged steel, carefully ground to size. Lubrication is by splash and the system is held to be very efficient.

The electric motor is .25 horsepower capacity and drive is by silent chain. A knife switch regulates the operation of the motor, and connected with this is a simple automatic air release, which permits the motor to attain full speed before receiving the full load. The maker states that this eliminates fuse troubles.

Two gauges are provided. One, conveniently located, indicates the exact air pressure in the storage tank, which is tested under 500 pounds pressure to the square inch, and the other is incorporated in the tire line.

The platform on which the equipment is mounted is fitted with rollers, permitting it to be moved about the garage or to the sidewalk when a tire is to be inflated with air stored in the tank. As previously mentioned, shoes may be inflated from the pump direct if desired, making for convenience.

The motors are supplied for either alternating or direct current, and when the former is to be used it is essential to state the number of cycles. In considering the installation of the equipment the maker states that it is important that the voltage be known and that the motor must receive its full number of volts if efficiency is desired. The Kellogg equipment comes complete or without the tank. The Kellogg Manufacturing Company will supply complete details on request.

AUTOMATIC TIME ADJUSTMENT.

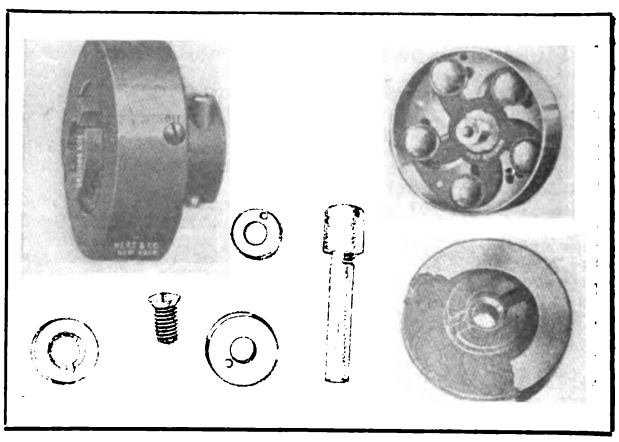
Herz & Co. Marketing Ignition Device Enabling Adjustment up to 40 Degrees.

Herz & Co., maker of electrical devices, is marketing the Herz patented automatic time adjustment for ignition apparatus. It is designed not only to prevent accident through back firing caused by improper advance of the spark, but it is held to make for economy in the operation of pleasure and commercial vehicles. The time of ignition is adjusted automatically in accordance with the number of revolutions, and the range is up to 40 degrees.

The components of the device are shown in an accompanying illustration and it will be noted that it comprises a coupling consisting of two juxtaposed discs, the construction being interposed between the magneto and driving shaft. Each disc is provided with five grooved curves running in an opposite direction to those in the other disc. Five steel balls are held in these grooves and function in a similar manner to the weights of a governor, being forced outward by centrifugal force in direct proportion to the speed of the motor. The maker states that this construction imparts a twist to the armature of the magneto in relation to the driving shaft.

It is held that any desired degree of adjustment may be obtained by altering the curves in a suitable manner, and that the absence of springs, journals, joints, etc., and the certainty with which the balls are guided, make for reliability of operation.

The device is supplied either as an integral part of the ignition apparatus or in the form of a coupling. Owing to the small space it occupies it is stated that in many instances it can be used



Herz Automatic Time Adjustment for Ignition Apparatus Up to 40 Degrees.

in place of the ordinary coupling and without alteration. Special literature is issued by the company and will be sent free on request.

Digitized by Google

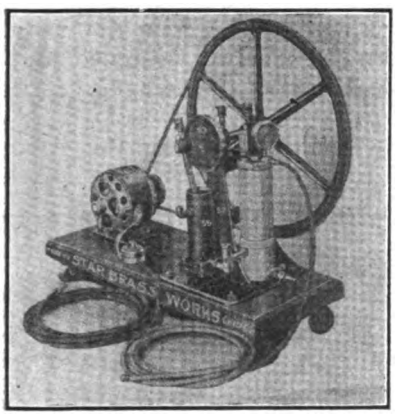
BINKS ELECTRIC TIRE PUMP.

Is Constructed to Withstand Severe Service and Is Held to Be Very Efficient.

The Star Brass Works, 1911 Fulton street, Chicago, is manufacturing the Binks electric tire pump shown in an accompanying illustration. It is designed both for public and private garages, and efficiency is one of its features.

The equipment is most complete and includes suitable length of hose, flexible lamp cord, etc. The compressor is constructed of the best grade of iron, neatly enamelled. The cylinder has a bore of two inches and a stroke of five, and is bored and ground to exact dimensions. The piston rings are of the same material as the cylinder and as carefully finished and fitted. All parts subject to friction are equipped with spring grease cups. The valves are of special design and material and, it is stated, will require no attention.

The compressor is operated by a .25 horsepower 110-volt direct or alternating current motor (60 cycles), and 15 feet of lamp cord with socket is included in the equipment. Lubricant is prevented from reaching the tires by a well designed oil extractor located between the pump and the hose. The relief valve may be set to any desired pressure, preventing over inflation or the bursting of tires. The outfit is mounted on a finished, painted platform two by 12 by 30 inches, and swivelling ball bearing casters make it an easy matter to move the equipment about the garage.



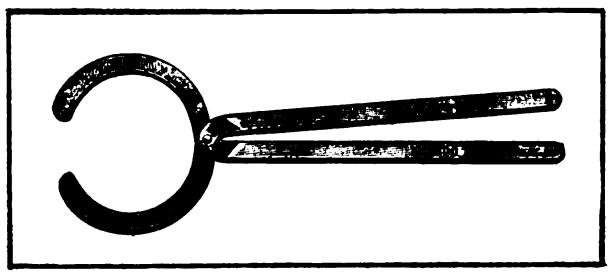
Binks Electric Tire Pump.

The Binks electric tire pump is constructed to withstand severe service and is liberally guaranteed by a maker having 14 years' experience in the production of pumps. Price lists and descriptive matter will be supplied upon request.

FORD PISTON RING CLAMP.

Nelson Device Compresses Rings, Enabling Easy Replacement Without Danger of Breaking.

The Nelson Manufacturing Company, 564 West Randolph street, Chicago, is marketing a number of Ford specialties, among which is a piston ring compressor shown in an accompanying illustration. It is designed especially for the Ford motor and could be employed with other engines the pistons of which are of similar diameter. The operation of the Nelson tool is obvious. It is placed about the ring and by exerting a slight pressure on the handles the ring is fully



Nelson Ford Piston Ring Clamp.

compressed. The tool is inexpensive and will save considerable time when replacing rings.

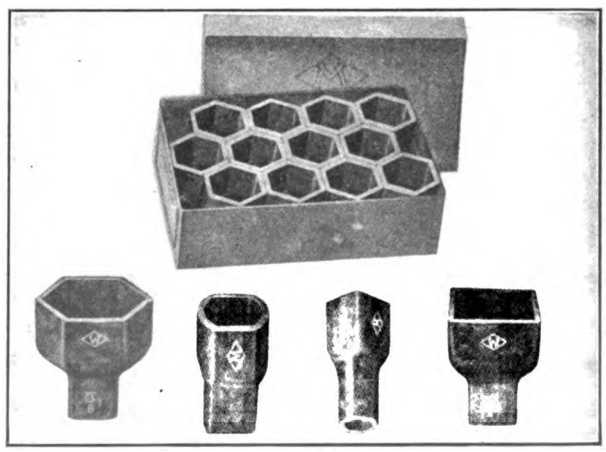
MOSSBERG SOCKET BRACE.

Is Designed to Fit All Sizes of Mossberg and Sockets Having a Standard Shank.

The Frank Mossberg Company, Attleboro, Mass., is manufacturing the Mossberg socket brace No. 360, shown in an accompanying illustration. A brace is a decidedly handy tool in the repair shop and garage and may be employed for a number of useful purposes, such as grinding in valves, removing the nuts of demountable rims, working about the power plant, etc.

The Mossberg brace is very efficient, being constructed of the finest grade of steel, dull nickel plated and with ebonized wood handle. It is 13 inches over all and is covered by the usual Mossberg guarantee. The chuck end of this brace holds all sizes of Mossberg sockets and those having a standard shank. The brace is moderately priced.

The company makes a specialty of pressed steel sockets, some of which are shown herewith. The product of the concern is well and favorably known among repairmen and the trade, as the sockets are constructed of pressed steel and hardened, and by their mottled finish. They fit hexagon and square nuts, set screws, and bolt

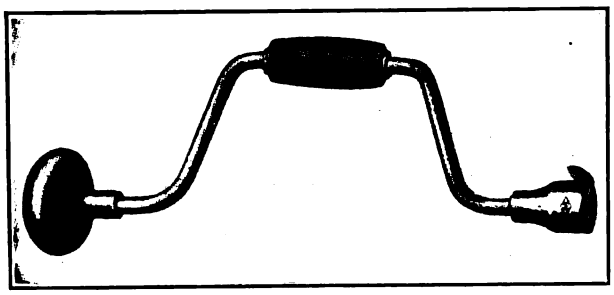


Mossberg Pressed Steel Sockets and Container.

heads. One of their qualities is that they are standard and will fit practically every socket set that is now on the market.

Digitized by Google

They are produced for U. S. standard hexagonal nuts and bolts, A. L. A. M. standard hexagonal nuts and screws, manufacturers' standard



Mossberg Socket Brace No. 360.

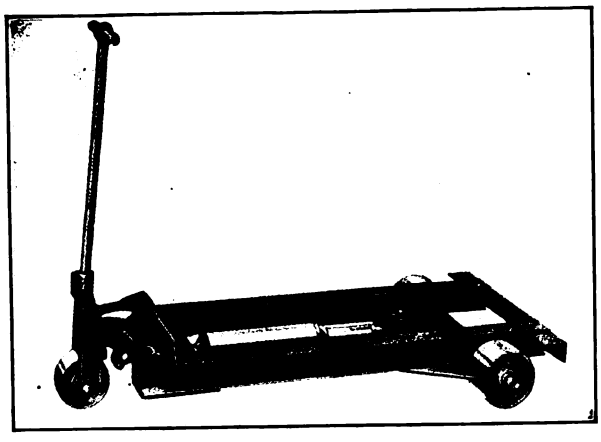
hexagonal headed bolts and for cap and coach screws. The maker calls special attention to the necessity when specifying, that dimensions of nuts should be given measured "across the flats", or, in other words, the smallest diameter of the nut or bolt head, and, unless the actual size of the socket is ordered, an allowance is made by the company of .03125 inch for clearance. The Mossberg sockets are marketed in attractive boxes, each containing one dozen. Prices and complete list of sizes will be mailed upon request.

COWAN TRANSVEYOR.

An All-Metal Construction Having Capacity up to 3500 Pounds and with Good Clearance.

The Cowan Truck Company, Holyoke, Mass., is manufacturing the Cowan transveyor, shown in an accompanying illustration, which is produced in four sizes, having capacities of 2000, 2500, 3000 and 3500 pounds respectively. One of the qualities of the truck is that it is an all-metal construction. It is designed to operate over rough floors, up and down inclines and with the platforms is held to save considerable time and labor in the transportation of material about the factory. It is pointed out by the maker that fully 75 per cent. can be saved in the ordinary factory equipment.

One of the features of the transveyor is its



The Cowan Transveyor Which Is Utilized with Special Platforms.

ample clearance when the platform is elevated, this being 2.75 inches. The type H transveyor is equipped with a specially designed hydraulic ram, and a few strokes of the handle will elevate maximum loads to a height of three inches, a clearance eliminating possibility of skids catching or encountering obstructions at the foot or top of inclines. It is stated that there is no possibility of the load being released until the operator presses a pedal, when the platform will slowly sink to the floor without shock or jar.

The front wheel of the all-steel construction is fully swivelled, making it possible to turn the machine in its length. The high grade ball bearings are protected by washers and dust caps, and the steering handle is at all times free, enabling the workman to guide the machine easily and accurately. The design of the handle is such that a straight pull is provided when removing the transveyor from beneath a platform. The wheels are six inches in diameter for the No. 1 and 2 types and seven for the others. The type H will be supplied with 10-inch wheels if desired. Specifications, dimensions and prices will be forwarded upon request. John Cronin, 118 Pearl street, Boston, is agent for the Cowan Truck Company.

LEAK-PROOF PISTON RINGS.

Are Made Concentric and So Designed as to Leave No Unsealed Openings.

The McQuay-Norris Manufacturing Company, St. Louis, Mo., is marketing the Leak-Proof piston head packing rings, which are a radical departure from the conventional types. As will be noted by an accompanying illustration, the rings are made in two pieces and the construction is on the angle iron principle. Consequently there are no unsealed openings, as the flange of each section completely seals the opening of the other, thus obtaining gas tight construction and making for perfect compression.

Leak-Proof Piston Ring.

The Leak-Proof rings are made concentric, instead of eccentric, and one of the qualities of the design is their equal tension on the cylinder walls.

The Leak-Proof rings are in service in a large number of motors, where trouble has been experienced through oil working up past the original members, and they are held to be decidedly efficient where imperfect compression is experienced. The McQuay-Norris Company is issuing a booklet on piston rings, etc., which contains much valuable and instructive data upon the subject. The brochure will be mailed free upon addressing department D of the company.

The Joseph N. Smith Company, Detroit, is publishing its 1915 catalogue. The line includes the Ackerman adjustable windshield, screw machine parts and small hardware.

Digitized by Google

DOMESTIC TUNGSTEN LAMPS.

Are Stated to Have Great Vacuum, Insuring Long Life and Efficiency.

The Domestic Tungsten Lamp Company, Weehawken, N. J., is manufacturing the Domestic tungsten lamp for motor car service. A drawn tungsten wire is utilized and it is stated to have a greater vacuum than any other lamp made for automobile use. The vacuum is first produced by an ordinary oil vacuum pump, then a mercury pump. This is held to insure longer life and freedom from a tendency to become black. The company manufactures lamps in varying sizes and voltages. Catalogue and discounts will be forwarded upon request.

BEAN TROUBLE FINDER.

Designed to Locate Easily and Quickly All Ignition Faults.

L. H. Bean, Worcester, Mass., is marketing the improved Bean trouble finder shown in the accompanying illustration. It is designed to locate ignition troubles easily and quickly, and the maker states that faults in coils, short circuits, pitted contact points, loose terminals, magneto troubles, etc., can be expeditiously determined by its use.

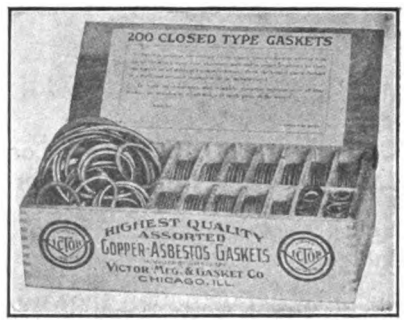
Bean Trouble Finder.

The device is operated as follows: In the event the engine misses, secure the trouble finder to the dash under the hood by the screws provided for this purpose. Attach the ground wire to any metal part of the chassis and start the motor. Take the handle from inside of the box and place the brass end on the terminals near the spark plug. If the spark misses in the glass of the finder, it denotes the coil is not adjusted properly. The action of the magneto may be tested in a similar manner; also all leads, etc.

VICTOR ASSORTED GASKETS.

Are Now Marketed in Assorted Sizes and Four Different Boxes Are Offered the Trade.

The Victor Manufacturing & Gasket Company, Troy and 21st street, Chicago, in addition to marketing its regular line of copper asbestos gaskets, is producing them in assorted sizes packed in boxes. Four different boxes are offered the trade, one of which shown in an accompanying illustration is for the model T Ford car.



Victor Assorted Gaskets.

Box No. 1 contains 12 complete sets of gaskets for the Ford car, these comprising that for the cylinder head, intake and exhaust, etc., and the company calls attention to the efficiency of the gaskets, stating that it supplies the maker of the Ford car with similar members in large quantities. Box No. 2 (that illustrated) contains 200 assorted copper asbestos gaskets selected from the most popular sizes universally used, and in proper proportion for everyday repairs on all makes of cars. The assortment is augmented by 65 selected sizes of gaskets to fit all makes of spark plugs marketed.

Box No. 3 has 50 assorted gaskets constructed especially for the intake and exhaust pipes and manifolds, exhaust flanges, carburetor connections, etc. There are 25 different sizes to choose from, making the equipment a valuable one to the repairman. Box No. 4 contains 100 assorted French type gaskets. All assortments are placed in a neat wooden box with steel hinge cover and the different sizes, etc., are located in compartments. Slips accompanying the boxes give the location and sizes. The trade prices will be forwarded upon request, also a catalogue.

GIDDINGS UNDER-CUT DRILL.

When Used with Special Chuck Bores Hole Which Locks Bearing Metal to Surface.

The Giddings under-cut drill is marketed by the Giddings Under-Cut Drill Company, 184 Summer street, Boston, and among the features of the tool is that when utilized in conjunction with a special chuck made by the company, it will bore an under-cut hole which locks the babbitt metal securely and permanently to any surface.

Victor Ford Gaskets.

The drills are made in standard sizes, .5, .625 and .75 inch. Special sizes are made to meet re-

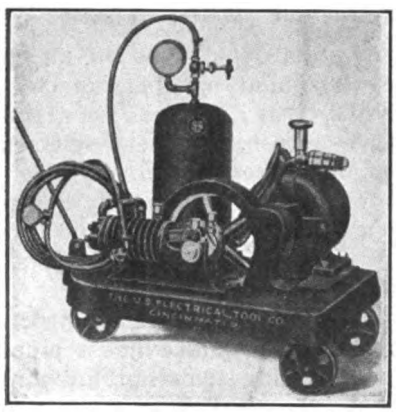
Digitized by Google

quirements. It is stated that the drills will bore a hole in five to 10 seconds, and that the best of material and workmanship are incorporated. Descriptive matter and price list will be mailed free on request.

U. S. AIR COMPRESSOR.

United States Electrical Company Marketing Complete Electrical Outfit for Garage Service.

The U. S. Electrical Tool Company of Cincinnati, O., is marketing the U. S. electrically operated garage pump shown in the accompanying illustration, and the maker states that it is constructed to withstand severe service. The complete equipment comprises an electric motor, single-cylinder compressor, air tank, suitable length of air hose, lamp cord and socket, gauges, etc., these being mounted on a low truck having caster wheels.



U. S. Electric Air Compressor.

Single castings are largely employed, the pump cylinder, bed and bearing brackets being cast in a single piece. The compressor has a single horizontal cylinder with deep air flanges for cooling, and is driven through a single gear reduction, there being a small pinion on the motor shaft and a very large gear on the pump shaft. Energy is supplied by a .25 horsepower Westinghouse motor, and the current supply is from the lighting system of the building, armored cable of suitable length and a rugged connector being provided. Lubrication of the compressor is by three oil cups. The method of motor lubrication is such that it will not require attention except after long periods of service.

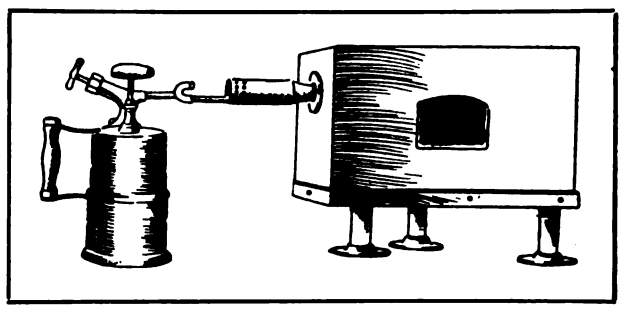
Air is pumped from the compressor to the tank, which is 12 inches high and six in diameter, and means are provided to trap any oil or moisture that may be present. Nothing but pure fresh air is pumped to the tires. The air hose is unusually long and constructed to meet the requirements of garage service. It is provided with a gauge to indicate the pressure, and the tank is equipped with a similar member of ample size. The usual shut off valve is included.

The maker calls special attention to the efficiency of the outfit, stating that it will inflate a 35 by four-inch tire from flat to 70 pounds in 1.5 minutes. The truck and wheels are of metal, and the equipment may be moved easily about the garage, a convenient handle being provided for this purpose. The U. S. Electrical Tool Company will supply additional details on request, also trade prices.

HAUCK KEROSENE TORCH.

High Temperatures, Efficiency and Low Cost of Operation Are Features Claimed.

The Hauck Manufacturing Company, 140 Livingston street, Brooklyn, N. Y., is marketing the



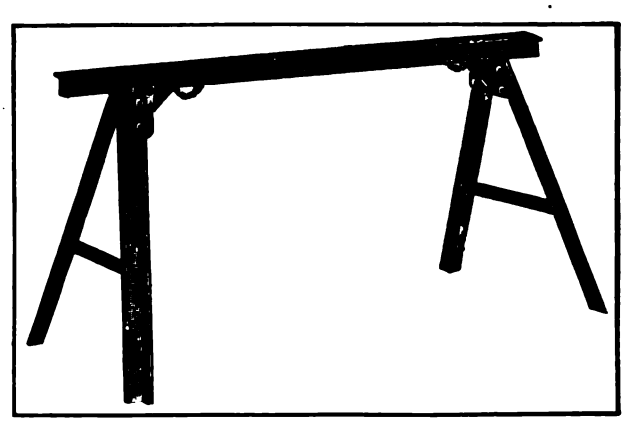
Hauck Kerosene Torch and Furnace.

Hauck patent kerosene torch, which is designed for general shop work and is held to be more efficient and economical than a gasoline unit. The maker states that the cost of operation is very low; that considerably more heat is obtained with kerosene than gasoline, and that the fuel is not only cheaper, but it is readily obtained. Another advantage in kerosene is held to be that it may be stored without restriction and is safer to use than gasoline.

FRASSE FOLDING TRESTLE.

Legs Are Provided with Locking Device and When Not in Service Make for Compactness.

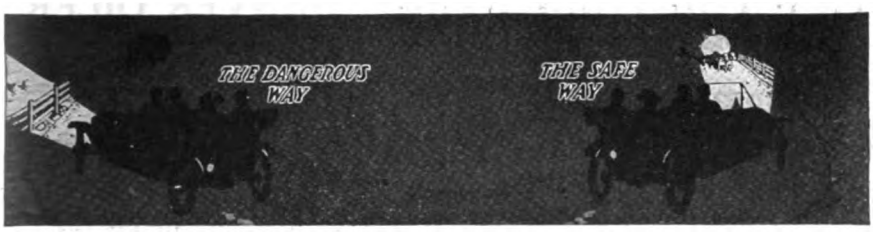
Peter A. Frasse & Co., Inc., 421 Canal street, New York City, is marketing a patented folding steel horse or trestle, which is designed for garage and repair shop service. It is light, strong and made of high grade material. The legs are provided with a locking device, which makes for rigidity when in service, and the trestle cannot be folded until unlocked. One of the qualities



Frasse Folding Steel Trestle or Horse.

of the design emphasized is that it may be folded and stored in a small space. It is made in standard and special sizes.

Digitized by Google



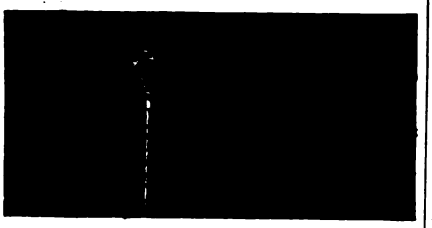
FOLLOW THE ROAD TO PROFIT WITH TURNING HEADLIGHTS

Every Ford car which comes into your garage is a live prospect for these safe and sane Turning Headlights. They automatically follow the slightest movement of the steering wheels and throw their light where you need it most—in the center of the curving road you are trying to follow in inky darkness.

There is a big demand for this device. The Safety First agitation is sweeping the country at present and the caution this has inspired in night driving, makes these supports quick sellers and profitable.

Turning headlights will never give you one minute of trouble after you have put them on—a quick job of 30 to 45 minutes. They won't rattle or work loose and are sold under a rigid "Money Back" guarantee if not found perfectly satisfactory after 30 days' trial. Retail price **$10.00** prepaid—and a good profit for our dealers.

Write us for the territory you can actually cover thoroughly—and prices. Order some sample sets at once. They will go fast. You get all the prospects in your section which our advertising develops.



Gasolock Your Cars

Here is the safest device yet invented to prevent joy riding and auto stealing. The Gasolock shuts off the gasoline with a simple touch of the foot or finger and can only be opened again by the Yale keys furnished with it.

The Gasolock saves automobile insurance against theft; it saves gasoline waste from leaky carburetors; it saves cars from joy riding wrecks.

Over 900 in Use in Detroit. We hold a basic patent on all devices for locking the gasoline supply and have started suit against infringers. This device can be installed in any car in 30 minutes and is positive protection.

There is a big field for the sale of the Gasolock in your city. Millions of dollars worth of cars are stolen yearly. Owners need this protection and will buy it readily. It is the simplest, safest, and cheapest high grade device on the market.

The Gasolock is beautifully finished in nickel plate and comes in several lengths to suit conditions. It sells for **$10.00** prepaid at retail—a small sum for absolute protection. Any car, motor truck or motorboat can use it.

Write us for our proposition and prices. Order a few and see how owners will take them away. Rather "Safety First" than a stolen car.

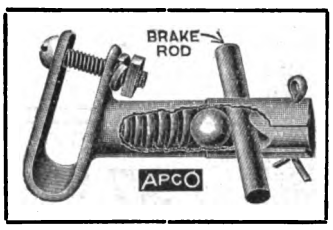
NEW AND ATTRACTIVE LINES FO

The Name Apco is well known to the trade and the owner of this trade mark, the Auto Parts Company, Providence, R. I., is calling the attention of jobbers and dealers to its brake rod support in a novel manner. Elsewhere in this issue will be noted the advertisement of the company, which offers to send a sample set of the ball bearing brake rod supports for 75 cents, which is considerably less than the usual price.

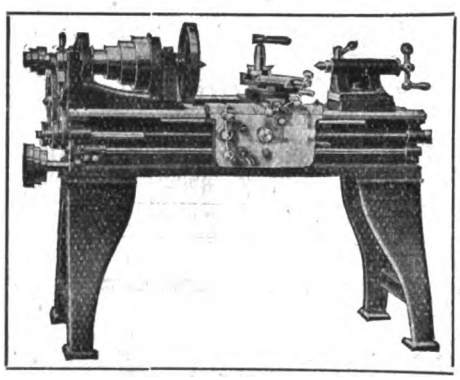


Apco Brake Rod Support.

The device is shown in an accompanying illustration and it is stated by maker that it is the only brake rod support that can be attached without removing members to which it is fitted. Only a screw driver is necessary to tighten clamping bolt. The brake rod is prevented from vibrating by a ball and plunger, the tension being automatically maintained by a spring. The brake rod is slipped into position after removing a cotter pin and plunger. Being ball bearing the brake rod support does not interfere with the movement of the rod, in operation. The Auto Parts Company is issuing a new catalogue containing many new Ford accessories, which will be mailed free upon request.

★

The Sebastian Lathe Company, 125 Culvert street, Cincinnati, O., is issuing its new catalogue of high grade engine lathes, tools and attachments for automobile and general repair work. The booklet is finely illustrated and contains complete descriptions of the lathes, and their attachments, as well as dimensions, prices, etc.



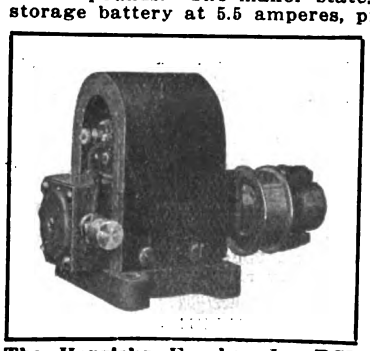
Sebastian Lathe.

The engine lathes are built from entirely new patterns and designs, and are modern and practical in every particular. Special care is given in their construction, and the best of workmanship and high grade material are incorporated. The company builds lathes for manufacturing, jobbing, or the repair shop, and a number of designs especially adapted for the automobile manufacturer and the garage. A postal addressed to the company will bring the catalogue referred to, in which full particulars are given.

★

The Henricks Novelty Company, Indianapolis, Ind., electrical engineer, one of the oldest magneto manufacturers in the West, has brought out an electrical lighting system for small automobiles, which is specially adapted to the model T Ford, Maxwell, etc. One of the qualities of the system is that it may be utilized for ignition purposes, as the generator is capable of maintaining a storage battery in a fully charged condition, as well as supplying sufficient current for lighting.

The small generator recommended for the Ford, Maxwell, cyclecars, etc., is known as the Eureka, Jr., type BC2. As will be noted by the accompanying illustration, it is a very compact unit, and its weight complete is but 14 pounds. The maker states that it will charge a storage battery at 5.5 amperes, providing ample current for 30 to 35 candle-power lights in addition to ignition. One of the features of the dynamo is that it can be employed for lighting the lamps direct or for charging a battery. The use of a battery is preferred, as lighting of the side and tail lamps is made possible when the engine and dynamo are inoperative.



The Henricks Eureka, Jr., BC2 Generator.

The Eureka is a well tried and proven generator, having been on the market for over six years, and the company points out that it has given efficient service on all types of motor cars and power boats. It is of the permanent magnet type, making for economy of power, and all material and workmanship are strictly first class.

A simply constructed automatic cut-out is placed between the magnets, this being operated by the governor. The cut-out is in the form of a switch, connecting the generator to the battery when the speed of the dynamo is such to generate six volts. It is pointed out that the cut-out has few parts, is simple in construction and requires no attention.

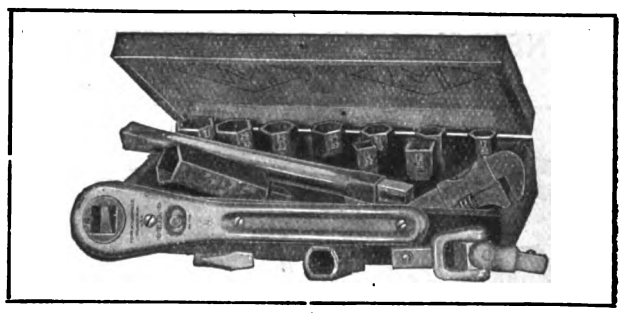
The governor is of the centrifugal type and so controls the speed of the armature that overcharging is held to be impossible. The speed of the armature is constant after attaining its maximum, regardless of the speed of the motor.

Special brackets are provided for mounting the generator with Ford and Maxwell cars. The company points out that the compactness of the dynamo permits of easy installation, and that it can be driven by a friction wheel or by a V belt. The latter method is recommended when possible. Silent chain drive is also advisable. The Eureka BC2 with cut-out and governor retails for $30, but it is pointed out that when used for direct lighting the cut-out and battery are not required. The company markets storage batteries, lamps, etc., and issues a very complete catalogue illustrating and describing its product, which will be mailed free upon request.

In addition to the Eureka BC2 dynamo, the dimensions of which are 8.5 by four by six inches, the Henricks Novelty Company manufactures three other types.

★

The Frank Mossberg Company, Attleboro, Mass., is manufacturing a special socket wrench set for the model T Ford car and one of the qualities of the equipment emphasized is that certain components not accessible with the usual wrench set can be reached with it. In designing the set particular attention has been paid to producing sockets which will reach every part, and the result is a very practical outfit.



Mossberg Ford Socket Wrench Set.

The set is known as the No. 15 and includes the Mossberg ratchet socket wrench No. 350, a tubular extension bar, universal joint, screw driver bit, spark plug socket and nine regular, mottled, thoroughly hardened pressed steel sockets. The last named members include a special oval socket for the three crankshaft bearing bolts, difficult members to reach with conventional types of tools. The equipment comes in a neat wooden box or a flexible fibre case and retails for $5.70. Trade discounts will be forwarded upon request, also catalogue of the Mossberg lines.

★

The Connecticut Telephone & Electric Company, Inc., Meriden, Conn., is manufacturing a very compact, neat master vibrator for the model T Ford car, which is constructed with the same care and high grade material as is characteristic of the products of this company. It draws a minimum amount of current from the flywheel magneto, making it possible to start the engine easily, and makes for perfect synchronization of the spark. One of the qualities of the Connecticut is that it is of the flush dash type, with switch integral with the coil, which comes equipped with the Connecticut terminals. The vibrator retails for $9 and is sold under a guarantee. Bulletin 48 explains the device fully, trade prices for which will be mailed upon request.

★

The Pyrene Manufacturing Company, 1358 Broadway, New York City, maker of the well known Pyrene fire extinguisher, which has been approved by the Automobile Underwriters' Conference, which organization has reduced insurance premium 15 per cent. when the car is equipped with the device, has inaugurated a publicity campaign with owners, the result of which will be decidedly beneficial to the trade. As will be noted by an advertisement of the company appearing elsewhere in this issue, the signing of a coupon and mailing it to the company will bring the special proposition now being offered.

Digitized by Google

R THE JOBBER, DEALER, GARAGE.

The Harding Specialty Company, 755 Boylston street, Boston, has brought out a new device for the garage, repair shop and service station, that presents practical features in that considerable time and labor may be saved by its use. It is termed the Little Giant magnetic trouble lamp, a combination unit, as it includes lighting means as well as a magnet.

The advantages of such a tool are obvious. Frequently a nut or bolt is dropped into the crankcase or gearcase of a car, or some other part difficult of access by the hand, which not only results in consuming considerable time in removing the pieces, but often compels the dismantling of certain components.

The Little Giant operates by electricity, and being attached to a flexible cable, can be inserted easily. The magnet has sufficient pull to lift fairly heavy objects, such as pliers, etc. It consumes but little current and retails for $3.

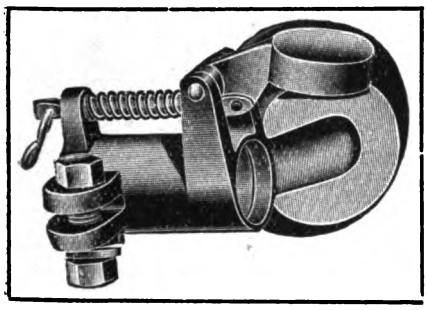
The Harding Specialties Company is also marketing the Boston tail light detector, which is a dash device for warning the driver of the car when the tail light becomes extinguished. It flashes a "Red Eye" signal, and is easily attached. It retails for $5. Complete details and discounts will be supplied upon request.

★

The Dreadnaught Tire & Rubber Company, New York City and Baltimore, Md., is marketing the Dreadnaught tire, which carries a guarantee of 5000 miles and with which the dealer can make adjustments on the spot. The company has a very attractive, exclusive selling proposition and has some territory open for a live wire. Complete details will be sent upon application to Henry G. Pagin, general sales agent, 1790 Broadway, New York City.

★

The D. Henry Bonner Company, Cambridge, Mass., is manufacturing the Tremo horn for the model T Ford car, also two designs for larger machines. It is operated by the exhaust, and, as will be noted by the accompanying illustration, the egress of the gases is not obstructed by the signal, which is absolutely free from any whistling noise.



Tremo Ford Special Horn.

One of the qualities of the Tremo is the elimination of the usual coupling. The attaching means are incorporated with the horn itself, a shank clamping over the extension of the exhaust pipe, it being locked by a simple bolt and nut. As the dimensions are accurate the shank fits closely and easily.

The signal is obtained by the usual linkage, which accompanies each horn, and it is stated that the Tremo operates equally well when the engine is throttled down. The design is simple and there are no parts to get out of order, or to be adjusted or cleaned. The complete equipment retails for $4. Special discounts are given to the trade upon application. The company manufactures four sizes, in addition to the Ford special.

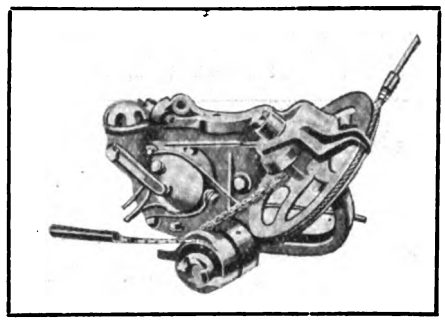
★

The Bowling Green Sales Company, 82 Flatbush avenue, Brooklyn, N. Y., exclusive sales agent for the Ball carbon remover, announces that it has territorial rights open and that complete details can be obtained by addressing department A. Ball carbon remover differs from the conventional chemical compounds designed to remove carbon deposits from the cylinders in that it can be used freely and when the motor is operating in service. It is put up in tablet form, is deposited in the cylinders through the spark plug openings, the plugs replaced and the motor used as usual. The only requirement made is that the compound be used when the motor is hot.

One of the qualities of Ball carbon remover emphasized is that it does not affect the oil; in fact, it is stated that the chemicals provide lubrication in themselves. Another feature is that there are no waits, and that by employing a few at stated intervals the cylinders are maintained in a highly efficient condition at a minimum of expense. The tablets come in screw cap boxes, sufficient to clean from 12 to 36 cylinders, and are inexpensive. They are fully guaranteed.

★

The Automatic Appliance Company, 172 Columbus avenue, Boston, is marketing the Boston starter, designed especially for Ford motors. It is a mechanical starter, which operates from the seat and starts the engine with the same certainty as though the crank were used. One of the qualities of the Boston is that it does not interfere with the use of the usual starting crank. The starter is provided with an automatic release for protection, and as a further precaution the spark is automatically retarded before the engine is turned over.

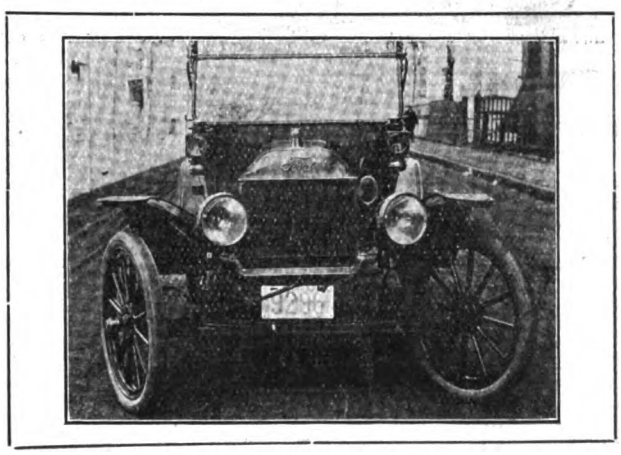


Boston Starter for Ford Cars.

The device may be installed easily and without interfering with or changing the appearance of the machine, as the equipment, with the exception of the operating handle, is fitted under the hood. The handle is installed within convenient reach of the driver, and is connected with the starter mechanism by a special cable. As considerable leverage is obtained by the starter proper, the motor may be turned over easily by a child. The entire construction is neat and substantial. The equipment, ready to install, retails for $25, F. O. B. Boston. The company has an attractive selling agency plan, the details of which will be forwarded upon request.

★

The Auto Protector Company, 58 Tyler street, Springfield, Mass., is marketing the Clear Ahead lamp bracket, a construction that is easily attached to the car without alterations. As will be noted by the accompanying illustration, which depicts the device fitted to a model T

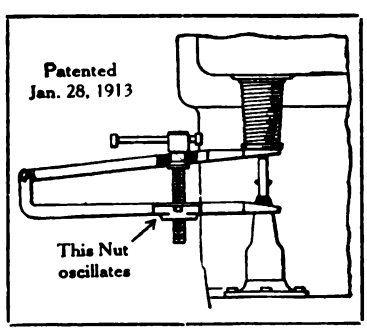


The Clear Ahead Lamp Bracket.

Ford machine, the attachment turns the lamps to the right or left or in the same direction as the steering wheel is turned. This enables the driver to negotiate sharp curves at night, as the sides of the road are illuminated as well as the centre. The Ford special retails for $12.50 and the regular or standard type for $15. The company will supply complete descriptive matter and trade discounts upon application.

★

The C. P. Improved Valve Lifter, manufactured by the Clinton Machine Works, 460 High street, Clinton, Mass., is a practical, universal valve lifter and is inexpensive, retailing for $1. As will be noted by the accompanying illustration, which shows the tool in service, it operates in a manner similar to a vise, a threaded member being actuated by a lever. By placing the forks of the lifter on the pushrod and valve spring, the screwing of the threaded member moves the upper fork upward, compressing the spring. The lower fork carries an oscillating nut, compensating for the movement of the upper fork. As is obvious from the illustration, the spring is locked, enabling the workman to use both hands to remove the retaining key or pin, an advantage where these members are



C. P. Improved Valve Lifter in Position.

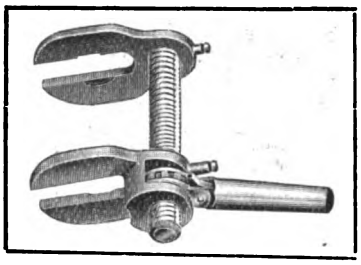
PRODUCTS OF THE MANUFACTU

burred and require force. The design also eliminates the possibility of the tool slipping and injuring the hands. It is adapted to any type and make of motor.

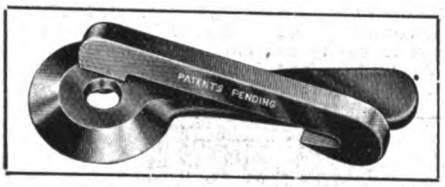
★

The Morgan Manufacturing Company, Newport, R. I., maker of automobile specialties, has brought out a new brass and metal polish termed MorganBrite, which is not only held to impart a lustrous finish, but an enduring one. It comes in the sealed Polisaver cans, in all popular sizes, and the prices are very attractive. The company has an interesting proposition and samples for the trade, which may be obtained by writing department F.



Morgan Utility Tool.

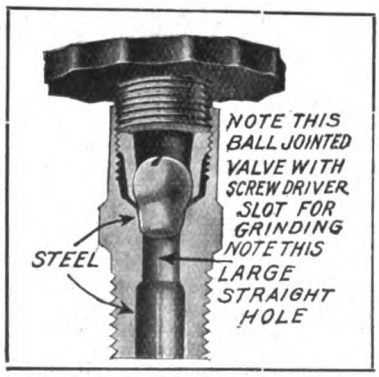
Among the many specialties manufactured by the company is the Morgan rolling edge spring leaf opener, shown in an accompanying illustration. The design is simple and efficient and reduces to a minimum the work of separating the leaves of a spring when lubrication of these members is necessary. By placing the chisel point of the tool between the leaves of the spring near the end, and the edge of the rolling tool on the other side, the leaves are separated by a slight pull of the handle.



Morgan Spring Leaf Opener.

The device is manufactured in several sizes, these ranging from that adapted to a cyclecar to that for a locomotive. The finishes are mottled steel, nickel plate, satin and nickel plate polish. The automobile sizes retail for 50, 65 and 75 cents respectively. The size B takes a two-inch width spring, and the size C a 2.5.

The Morgan utility tool, as the name implies, is designed for a number of useful purposes. It can be utilized as a valve spring lifter, and its construction is such that it can be locked to hold a load in either direction. The tool can also be employed as a clamp, patch holder, spring compressor or stretcher, hand vise, drill jig, etc. It is made of a very tough steel and will withstand severe service. It comes in sheradized or nickel plate finish, retailing for $2 and $2.25 respectively.



Morgan Priming Cup.

The Morgan priming cup differs materially from conventional types, as will be noted by an accompanying illustration. One of the qualities of the device is that it may be operated when the motor is hot without injuring the hands. Another feature is the use of a ball jointed valve, which is an advantage in that it may be ground if necessary. The Morgan Manufacturing Company will forward its catalogue and trade prices upon request.

★

The Platt & Washburn Refining Company, 1 Broadway, New York City, was incorporated in 1885, and its Veedol is an automobile lubricant made from the best Pennsylvania crude petroleum and the result of 30 years' experience with every kind of lubricating oil. The company states that it has tested the product, not only by every method known to science, but in actual service under the severest conditions in every standard type of car. It, therefore, is confident that Veedol will give satisfaction and will prove a business builder for the dealer.

At present it is interested in extending its representation, desiring a responsible agent in every automobile centre in the country. It has an entirely new selling plan, which it is anxious to explain to dealers where there is no agent in the vicinity, and it is prepared to back up its representatives with what the company believes is the most intensive consumer advertising campaign ever put in operation for a lubricating oil.

★

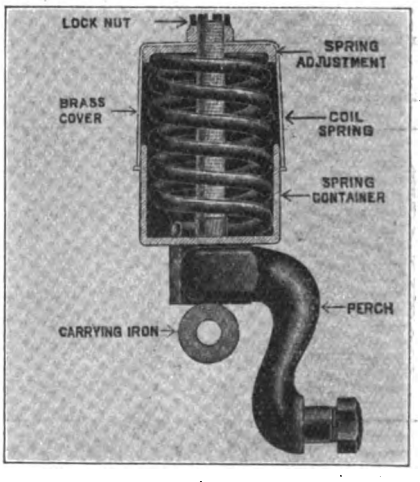
New Departure Ball Bearings can be obtained readily by the trade, as the New Departure Manufacturing Company, Bristol, Conn., has established a special service for garages, repairmen and dealers by appointing distribution agents in all sections of the country. These concerns carry a stock of New Departures and can furnish single row, double row and Radax bearings for replacement and repair work on the shortest notice. To save time, the company recommends that orders be placed with the nearest distributor, a list of which will be found elsewhere in this issue.

★

The Standard Woven Fabric Company, Framingham, Mass., maker of the well known Multibestos brake lining, is issuing a special booklet on the subject of brake material, which will be of interest to every garageman, dealer and repairman. It abounds with interesting data, as well as information that should be in the possession of every person connected with the automobile industry. By filling out the coupon attached to the advertisement of the Standard Woven Fabric Company in this issue, and mailing it, the booklet will be sent free.

★

The Ely Shock Absorbers for Ford cars are marketed by the Donnelly Motor Equipment Company, 1785 Broadway, New York City, and come in sets of two and four. One of their qualities is that they eliminate the disagreeable vibration when traversing pavements, as well as take care of heavier shocks when operating on rough highways, etc.



Ely Shock Absorber for Ford Cars.

Another feature of the Ely is that provision is made for adjusting the tension of the coil spring to conform to the varying weight of the equipment, passengers, etc.

As will be noted by an accompanying illustration, the design is of simple construction and is one that should make for efficiency and durability. It comprises a coil spring of a high grade, tempered steel; a carrying iron and a perch. The spring is contained within a brass cover, which is made oil tight in case the use of lubricant is desired. The principle of the Ely absorber is a spiral auxiliary spring providing a pivot point suspension.

The absorbers are easily fitted, the maker stating that any owner can attach them in a few minutes. They are made for both the front and rear springs, and are guaranteed against imperfection of workmanship and material for one year. They come finished in specially prepared black rubber and the selling proposition is an interesting one, both to the trade and purchaser. Being constructed to eliminate minute vibration, as well as shocks, they save tires and the car mechanism from undesirable stresses. Prices, etc., will be forwarded upon request.

★

The Motor Parts Company, 185-187 Columbus avenue, Boston, Mass., was organized a little more than a year ago with a view to meeting the needs for quick service, quality products and the fullest measure of satisfaction which was believed to exist in the New England territory. Under the management of F. W. Wilkenning, the same policy of quality, efficiency and service which had previously marked the success of the Motor Parts Company, 818 North Broad street, Philadelphia, was adopted, and every effort has been made to place this organization on a basis where it could best serve the public. Early in the year it was deemed advisable to locate a branch house in Springfield, Mass., at 143 Chestnut street. The organization has now been extended to include representative concerns in commercial centres throughout New England, each of which has a fully equipped laboratory for the adjustment and repair of Bosch ignition systems.

In addition to Bosch magnetos and spark plugs, the company is distributor for a long line of other special-

Digitized by Google

RER THAT WILL BE IN DEMAND.

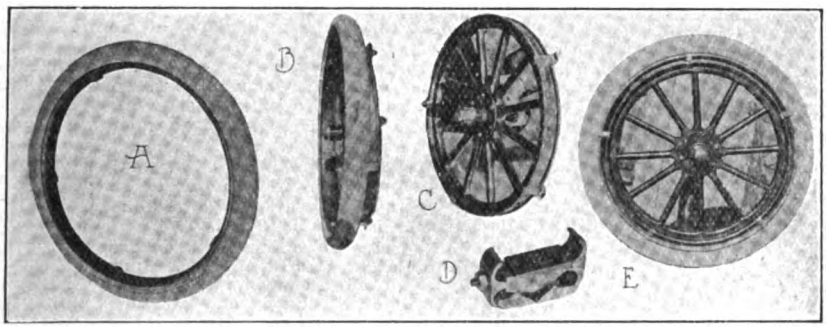
ties, including Kemco fan type generators, Zenith carburetors, Leak-Proof piston rings, etc. It is possible to purchase Bosch ignition system parts and spark plugs of any of the associated companies at the same price that is charged by the main house at Boston or the branch house in Springfield, and, in addition, each of these companies carries in stock a full line of the other specialties handled by the Motor Parts Company. The object sought is to afford a co-operative plan, in which combined resources afford the fullest benefit through mutuality of endeavor.

★

The Chester Demountable Rim Company, Fall River, Mass., is manufacturing a demountable rim for the model T Ford car, which will appeal to owners desiring to equip their machines with demountable rims, in that the car is not laid up or the wheels altered. As will be noted by the accompanying illustration, it differs from conventional practise, in that no cutting down of the spokes or building up of the felloes, drilling, fitting new bands, etc., is necessary. Another quality of the design is that there are no bolts to work loose on the felloe, and that only five nuts are required. Rings, levers, etc., are also eliminated.

A feature of the Chester rim lies in the statement made by the maker that the equipment can be attached in 20 minutes or less. The regular clincher rim is not disturbed, as the retaining construction shown at D is easily fitted to the old rim as indicated at C. The new rim A has spot welded edges and is slipped over the old member as illustrated at B. The rim and its casing is secured by a simple clamp and locking nut, there being five of these members. Their removal and replacement are accomplished by a double socket wrench, which accompanies each equipment.

Another quality of the Chester rim is that the same



Chester Demountable Rim for Ford Cars: A, Rim with Spot Welded Edges; B, Rim Being Demounted; C, Attachments in Position to Receive Rim; D, Members, Which Hold Rim to Wheel; E, Rim Locked in Place.

size shoes, 32 by three inches, are used all around. This oversize makes for easier riding qualities and tire economy, and the company is prepared to supply some interesting figures on tire mileage obtained with its equipment. Complete details and prices will be supplied upon request.

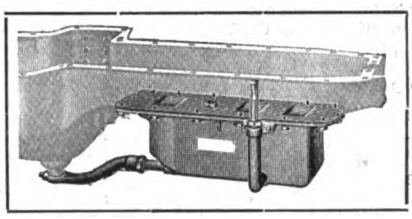
★

Panhard Oil has been on the market since 1904, which is practically the same as stating that its history is coincident with that of the automobile industry. Its checkerboard cans have become so well known among motorists as to establish a trade mark readily recognized as representing a standard product. The maker, George A. Haws, 148 Front street, New York City, explains that its policy always has been that of building for a permanent success. Its efforts have been directed toward the production of a lubricant which, in actual use, would be able to make good every claim advanced for it. Dealers, particularly those in sections where Panhard oil is not now represented, are invited to adopt the same policy by co-operating with the maker under a new sales plan, details of which will be forwarded upon request.

★

The International Metal Polish Company, Indianapolis, Ind., maker of Blue Ribbon metal polish, nickel polish, auto body gloss and radiator cement, has brought out a new article termed the Blue Ribbon cold cream soap. Among the features of the new soap is that it contains no grit and the use of water is not required. It is also stated that it leaves the hands soft and clean, and that chapped hands are avoided because of the absence of water. The company anticipates a large demand for cold cream soap by the owners, and is prepared to supply the trade, which can obtain complete details, as well as a sample, by writing the factory or the New York office, 335 Broadway. The full size can of cold cream soap retails for 10 cents.

The Danver Accessory Company, 18 Broadway, Pawtucket, R. I., maker of Daco specialties for the Ford car, is marketing, in addition to its brake rod support, brake shoes, combination anti-rattler and grease cup, the Danver automatic oiler. This replaces the lower half of the Ford crankcase and, by the use of a novel arrangement of compartments into which the connecting rods dip, and a standpipe, a constant level of the oil is maintained regardless of the supply in the reservoir. The lubricant is constantly circulated, a method making for economy in that an efficient working temperature of the oil is obtained. As the level is regulated regardless of grades and supply, smoking is eliminated, as well as waste of the lubricant. The oiler comes complete for attachment and an accessible gauge is included. Trade discounts and descriptive matter will be supplied upon request.



Danver Ford Automatic Oiler.

★

The Connecticut Shock Absorber Company, Meriden, Conn., is manufacturing the Connecticut shock absorber for model T Ford cars, which involves the same principles and material as used on the large members. Ease of installation and efficiency are emphasized in the design, which retails for $15. The construction, etc., is explained in bulletin No. 46 issued by the company.

★

The Salvador Motor Company, 126 Massachusetts avenue, Boston, Mass., has an interesting proposition for dealers in unassigned territory, respecting its Salvador cyclecar, the dimensions of which, according to the definition of the Cyclecar Manufacturers' National Association, place it in the light car division of the cyclecar field. This machine is said to have been designed by G. B. Mansur, formerly with the De Dion-Bouton Company, Paris, and to incorporate a number of foreign features, which have been adapted to meet the requirements of American road conditions. The motor is a four-cylinder, four-cycle unit, rated at 15 horsepower, which delivers power to the bevel gear rear axle through a cone clutch, three-speed selective gearset and propeller shaft. Springs are quarter-elliptic in front and cantilever type in the rear. The body is arranged to seat two passengers side by side, with the driver at the left. The company states that applications for territory must be made immediately, as the output for the present year is rapidly being allotted.

★

The Headlight Support Company, 1212 Dime Bank building, Detroit, manufacturer of auto devices, is marketing Turning Headlights for model T Ford automobile, and one of the qualities of the design is that they may be quickly and easily attached. As the name implies, the device actuates the headlights so that they automatically follow the slightest movement of the steering wheel, thereby throwing the light where it is needed

Showing Advantage of Headlight Support Company's Turning Headlights.

most. When rounding a curve the rays are so projected that the inner portion, as well as the centre of the road, is illuminated, making for safety.

The advantages over the fixed types of lamps are obvious. The Turning Headlights permit of driving with safety over unknown roads, entering curves and turning out for approaching vehicles, as the lamps automatically turn as above explained.

The maker states that the lamps will not rattle or work loose and that they are sold under a liberal guarantee. The retail price is $10, and the company has territory open, as well as a good proposition for the trade. Full particulars as to sample sets, prices, etc., will be

Digitized by Google

LABOR SAVING EQUIPMENT FOR

forwarded upon request. The company also markets the Gasolock, which has been described in these columns.

★

The Stevens Manufacturing & Supply Company, Fisher building, Chicago, is marketing the Stevens auto tire check valve, shown in complete form and with the dust cap removed in the accompanying illustrations, which are of actual size. One of the qualities of the design is its simplicity, there being but four parts as compared with 11 in conventional types. The maker points out that there are no springs to wear out; that the action is positive, and that the greater the air pressure in the tire the tighter the valve is closed.

One of the features of the Stevens is that the valve operates the full length of the pump compression stroke. This makes inflating tires easy and insures the proper pressure because of the ease of operation. It is also stated that a child can operate the pump with one hand when Stevens valves are fitted.

Stevens Auto Tire Valve.

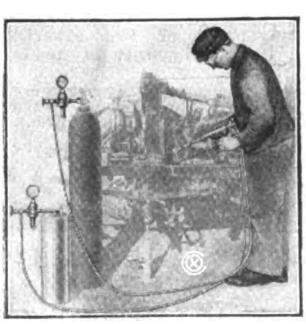
The device consists of a hexagon brass barrel with a thread cut on the small end to fit any standard pump connection. The other end is tapped to screw onto the valve stem, and has a channel through the entire length of the barrel for the passage of the air. The hexagon chamber is taper bored for a rubber plunger, and the chamber is machined true and smooth on the inside to permit the plunger to move freely. A fibre washer prevents air from leaking.

The Stevens can be applied to any valve stem and the maker states that they are used by leading racing drivers. They retail for $1 the set and are accompanied by a 30-day trial guarantee. Agencies are wanted in all unassigned territory. Terms and discounts will be supplied upon request.

★

The Cox Brass Manufacturing Company, Albany, N. Y., is marketing the Cox combination welding and decarbonizer outfit, shown in an accompanying illustration. The dual equipment comprises a highly polished oak case, nickel trimmed, with a cover and handle. The case contains a welding torch, six interchangeable tips, sufficient to do welding on all kinds of work; one oxygen reducing and regulating valve, with gauge and shut-off; one acetylene reducing valve, with gauge and shut-off, fitted with special coupling for attaching to Prest-O-Lite gas tank; 12 feet of acetylene hose and a complete assortment of welding rods for welding copper, brass, iron, bronze, steel and aluminum. The wrenches, goggles, etc., are packed in a special, convenient case. In addition there is included a decarbonizing torch and swab for removing carbon from motor cylinders by the oxygen process. The last named provides the dual equipment to which reference is made above.

The company calls attention to the low cost of the apparatus, which is marketed as a unit or separately. A special gauge showing the supply of oxygen on hand is listed at a slight extra cost. The company supplies complete instructions for the use of both systems, and maintains a free service department for the benefit of its customers. Special attention is called to the regulator or reducing valves. These are so constructed as to automatically reduce the pressure of the oxygen from that of the tank of 1800 pounds, and that of the acetylene tank from a pressure of 200 pounds, to a low, workable pressure of from zero to 25 pounds. The pressure is regulated to an even consistency and does not vary from a set amount. Complete details and price lists will be forwarded upon application to the company.



Cox Welding Equipment.

The Cox Brass Manufacturing Company is also marketing the Cox-ajusto shock absorbers, which are not only adjustable to any load, but to any car. Adjustment is obtained by turning a cap at the base of the absorber, it regulating the tension of a tapered helical spring. Complete information and trade price lists will be forwarded by mail.

★

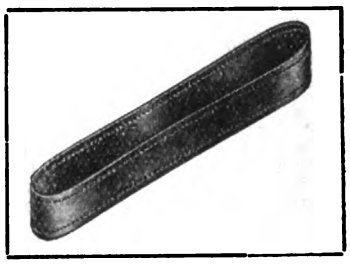
The Frank Miller Company, 351 West 26th street, New York City, is marketing a water proof dressing for leather tops, cushions, seats, upholstery, straps, etc., which is not only moderately priced, but is held to make an old top, or other similar equipment, look like new. The preparation restores the life of the material, and is especially adapted to tops that have become hardened and lustreless.

The company also markets a mohair top dressing, which is compounded for pantasote and similar materials. It is not a varnish; contains no injurious ingredients and imparts a new velvety finish without hardening the surface. Descriptive matter and prices will be mailed upon request.

★

The Perkins Campbell Company, 626 Broadway, Cincinnati, O., is marketing an attractive line of accessories for Ford cars, these including the Latigo fan belt, steering gear boots, crank holder, hood strap, license and tire straps, top rest, rebound straps, license holder and several other practical devices.

The fan belt which is shown in an accompanying illustration is made of genuine Latigo leather, a strong material, impervious to the action of oil, water or heat. The maker states it will not stretch or burn, and that it is very flexible. The belt retails for 50 cents.



Campbell Latigo Ford Fan Belt.

The steering gear boots come three to a set and are made of weather proof leather, laced on. Their construction makes it possible to pack the joints with grease, reducing wear to a minimum, as well as preventing the entrance of foreign and abrasive elements. The set retails for $1.

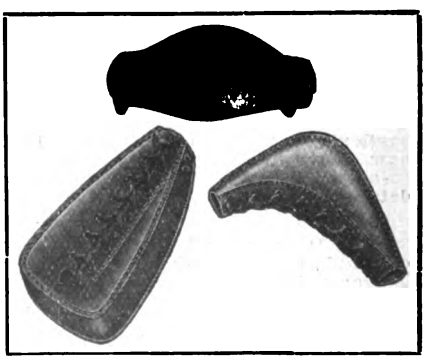
The company is featuring water proof seat covers, which protect the upholstery of a car, preventing its deterioration, and depreciation in the value of the machine. The covers, which include top members, are made of double, water proof, high grade cloth, over special patterns to insure accurate fit. The maker states that they will not shrink or stretch out of shape. Attachment is by means of screw glove fasteners. It is pointed out that they are easily fitted.

The company carries in stock seat covers for all models, including Buick, Cadillac, Ford, Hudson, Maxwell, Overland, etc., and an accompanying illustration depicts a 1914 Hupmobile equipped with the Campbell seat and door covers. The equipment is moderately priced, and the company will forward complete data and prices on request.

★

The Waite Auto Supply Company, 81 Exchange place, Providence, R. I., is one of the largest, if not the largest, exclusive automobile supply and jobbing houses in New England, and its location—within three minutes of all shipping lines, either by rail or water—is such as to afford excellent facilities for quick service. Dealers are not only invited, but urged to send at once for the latest issue of the big Waite catalogue, which lists in detail the complete line of accessories, supplies and fittings carried by this concern.

These include Rayfield carburetors, Mea magnetos, Batavia tires, Waite Success dry cells, garage air compressors, Success spark plugs, Klaxon electric horns, automobile springs, machine and hand tools, overhead washers, gasoline storage systems, etc., and among the new lines added recently are the following: Halliday Ford shock absorbers, Leak-Proof piston rings, vises, taps and dies, Raybestos brake lining, tungsten bulbs, G. B. valve tools, Barrett jacks, Keystone greases and Empire piston ring compressors. The company makes a specialty of guaranteed service, and uses every effort to insure satisfaction in all respects.



Campbell Ford Steering Gear Boots.

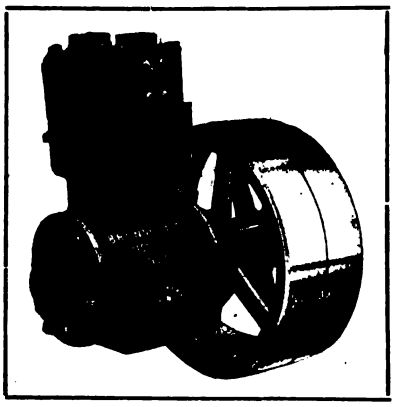
THE GARAGE AND REPAIRMAN.

The Brunner Manufacturing Company, Utica, N. Y., is well known among the trade as the maker of high grade compressors for garages, repair shops and service stations. This concern has made a specialty of power driven compressors for years, and each Brunner machine is backed by a guarantee for service, durability and satisfaction. The company calls attention to the statement that some of its compressors have been in use for nine years and are still efficient.

All types and sizes of machines are constructed to meet requirements and accompanying illustrations depict two garage types, the No. 17 vertical and the No. 102. Both are belt driven units. The No. 17 is a vertical, two-cylinder compressor, adapted for large garages and service stations where severe service is required. It has a capacity of seven feet of air and 170 pounds pressure at 350 revolutions a minute, and is used in connection with tanks of 80 to 150 gallons capacity. Lubrication is by the splash system.



No. 17 Vertical Brunner Compressor.

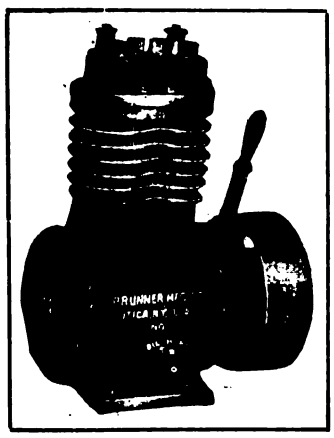
The No. 102 Brunner is a two-cylinder unit, lubricated by the splash system and has adjustable safety valves in the cylinders. The company states that it will supply more air and higher pressure with less power than any other compressor made, of same capacity. It supplies three feet of air and 150 pounds pressure at 400 revolutions a minute. The Brunner Manufacturing Company produces a variety of compressors, prices and details of which will be forwarded upon request.

★

The Rub-On Manufacturing Company, 89 Brayton street, Buffalo, N. Y., is marketing a number of preparations for renewing shabby parts of the automobile, these including restoratives for the top, upholstery, etc. Among these is Rub-R-Tite, which provides a black, water proof, flexible coating for a top, one that will not crack in zero weather, it is stated. The preparation is easy to apply. It comes in various sizes and is adapted for mohair, leather or rubber, and imitations of these materials.

The company also manufactures Rub-On concentrated lining dye, which is prepared especially for tops that have become discolored through neglect or long service. It is applied with a sponge, and it is stated that it is impervious to water and that it will not injure the material. It comes in black only.

Col-R-Ol is for renewing the appearance of either leather or imitation cushions and upholstery. It is claimed that it gives a fast, water proof color to the material to which it is applied and that it will dry quickly. It redyes the same or a darker color, and comes in black, green, maroon, red or tan.



No. 102 Brunner Compressor.

The elastic or Rub-On varnish is colorless and is for restoring the finish of the body, etc. Gloss Film is also produced by the company, a paste that puts a transparent smooth film over the varnish, thus preserving it.

Sta-Fix radiator mend, as the name implies, is for repairing leaks in the radiator. It stops leaks by forming a hard cement when the fluid becomes exposed to the air. It is mixed with the cooling fluid.

The Stay-On enamel produced by this concern is adaptable for metals and with it a hard, semi-bright, black finish is obtained. It will dry thoroughly when exposed to the air or it may be baked on, as desired. It is applicable to all metal parts of the machine, such as lamps, fenders, radiator, hood, etc., and is held to be very durable and lasting.

The Rub-On Manufacturing Company is also marketing the Auto Turn Jack, by means of which one person can raise the heaviest car easily and place it in the desired location. It is designed to economize space in the garage, as well as to save considerable labor. It has an instant adjustment for all heights of axles, and the length of the handle is five feet. It fulfills practically the same function as a turntable and is placed under a machine very quickly and from different angles. Tipping up the jack handle and lowering the lifting post permit placing the jack under an axle, while pulling down the long handle, causing the jack wheels to run under the machine's axle past dead centre, raises its front end. The company has a free cabinet proposition which will be mailed with complete data on its line, as well as prices.

★

Havoline Oil enjoys an enviable reputation among motorists, having been on the market practically since the inception of the industry. The Indian Refining Company, New York City, has prepared a new price scale policy and advertising plan, designed to make an especial appeal to dealers, full particulars regarding which may be obtained by addressing department M. Havoline oil is stated to be refined only from one uniform base, the lubricating fraction of which is held to be superior to that of other crude oils, thus assuring the customer the same high quality and lubricating value regardless of the time at which he purchases.

From the dealer's viewpoint, this is considered of the greatest importance, since it makes possible guaranteeing uniformity of quality and correspondingly good results for all time. The company is prepared to assist its representatives in every way in bringing its product to the attention of new customers.

★

The Monarch Manufacturing Company, 213 North Main street, Dayton, O., maker of welding and decarbonizing outfits, has evolved an interesting proposition for the trade, one that is a departure from conventional sales methods. By it a repair shop, garage, service station, etc., is enabled to obtain a complete welding and decarbonizing equipment at a very small expenditure. Details of the offer will be submitted by the company upon request.

The advantages of such an outfit are well known to the trade, as it permits of saving considerable time in the welding of parts that would otherwise have to be sent outside. The uses to which a welding equipment may be put are so numerous that a large number of shops have installed them. The Monarch Manufacturing Company's equipment is most complete and the concern is prepared to submit interesting figures showing the profits possible with its outfits.

★

The Nicholson File Company, Providence, R. I., an old and well known maker of files, has brought out what is termed a coil file for remedying ignition troubles. It is a handy little tool, which will prove of value in the garage, repair shop and service station, as well as with owners, as it is designed especially for trueing up the platinum points of coils and can be used with magnetos or any other ignition device employing platinum contact points. The file is so cut that it will true points without removing too much metal, as is usually done when employing ordinary members. The company produces all types of files and a postal will insure the receipt of a catalogue showing 600 reproductions of files, together with a booklet entitled "File Filosophy", a valuable treatise on the use and maintenance of files.

★

The American Vulcanized Fibre Company, Wilmington, Del., is manufacturing speedometer gears in standard sizes and is prepared to furnish at short notice special sizes to meet requirements. Data on speedometer gears are included in bulletin No. 4014, which will be forwarded upon request. The company makes a specialty of cleats, lever and crank handles, spring blocks, manifolds, thrust washers, camshaft gears, sheets, rods and tubes, and will quote prices on special work upon the receipt of blue prints or drawings.

EDITOR'S COMMENT.

Manufacturers, distributors, agents and dealers are invited to forward to the editor of The Accessory & Garage Journal, catalogues, circulars or other descriptive matter of their lines for publication in this department. When possible cuts or suitable illustrations should be included. The publication of descriptive articles does not place the contributor under any obligation whatsoever, but the editor reserves the right to utilise or return any article submitted. It is important that the street address be given, also name of maker if lines are handled by a distributor or agent.

IF YOU WANT NEW BUSINESS

If you want to increase your sales Sell the Goods the Public Knows

MOSLER'S "SPIT-FIRE" PLUG is better known than any other spark plug. It is more advertised, is to be found as equipment on more Automobiles, Motor Cycles, Motor Boats, and stationary Gas Engines than any other spark plug made.

This fact means rapid sales for the man who handles the "Spit-Fire".

Mosler's "Spit-Fire" Plugs Are Guaranteed Forever as to workmanship and material.

See our Red Tag guarantee attached to every platinum pointed "Spit-Fire" Plug. MOSLER'S "SPIT-FIRE" Plugs give the hottest spark and actually INCREASE HORSE POWER.

A stock of "SPIT-FIRE" Plugs means profit for you and ABSOLUTE SATISFACTION for your customers.

They are made in Every Size and in Every Style.

We recommend Genuine Iridium Platinum Points: the best magneto plugs made, equally efficient with battery or magneto spark. Remember that PLATINUM POINTS LAST FOREVER.

Write today for our proposition. It will pay you.

PANHARD OIL

Dealers' Bulletin No. 6.

A New York newspaper which had been investigating the tea business, recently published an article which read in part as follows:—

> "Unhappily there are many 60-cent teas on the market which are worth about 17 cents a pound, sometimes less. The lowest grade stuff, even siftings and dust, which will make up a cup of tea with a tea flavor, can be put in a fancy package and sold at a fancy price, at an enormous profit to the faker and a corrupted taste to the user."

This applies with equal force to the automobile oil business. Are *you* basing your hope of a permanent oil trade on a product of this kind? If so, are you wise?

Panhard Oil has been known since 1904 as the best. It is building for permanent success. So is the dealer who sells it. Write now for details.

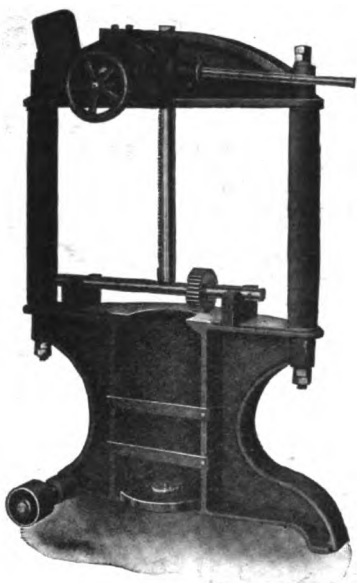
GEORGE A. HAWS, 148 FRONT ST., NEW YORK

PUBLISHED BY THE AUTOMOBILE JOURNAL PUBLISHING COMPANY, PAWTUCKET, R. I.

For Owners Use Automobile Journal. The Motor Truck For Truck Buyers.

The No. 15 Greenerd Arbor Press

Was Designed Especially for Garage Work. This press is Needed in an Automobile Repair Shop for Two Reasons:



First—It will repay its cost in a short time.

Second—Many automobile owners are mechanics, or at least mechanical, and realize the mutual benefit of tools to "do things right."

The No. 15 Press has many advantages that will at once appeal to the automobile machinist.

MANIPULATION

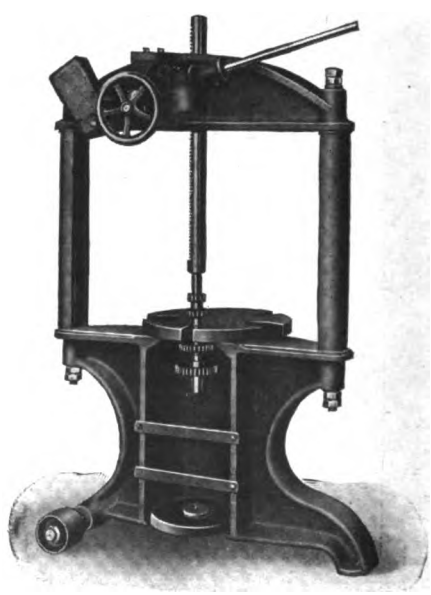
Rapid and easy. The ram can be quickly run up or down by the small hand wheel in front of the press.

ADVANTAGES OF DESIGN

Thirty-six inches between the uprights, 12 inches opening under the plate, 26 inches over the plate, 48 inches over the lower or auxiliary plate. Mounted on wheels the press can be easily moved to the center of your shop to straighten an axle, or over a trap hole through which a crank shaft may be placed to remove a flywheel.

AUXILIARY PLATE

at the bottom of the chamber under the revolving plate having a receding center and a self-conforming surface to press against —very convenient when needed. This plate is removable.



POWER

One man can exert ten tons pressure, two men sixteen tons. This statement is not "trade talk," it's true. The workman "feels" what he is doing. For this reason a pressure gauge is hardly necessary with a Greenerd Arbor Press.

THE GEARING

is all of special steel "heat treated." The gears having the greatest strain are chrome vanadium. Greenerd Arbor Presses are built to use, and to endure. Weight 1300 pounds. We build 15 sizes, exerting from a few pounds to 40 tons.

Write To-day for Our New 1915 Proposition

1882-1914

THE SLATE

The dealer who is building his business on a permanent basis, will give due consideration to the following:

The Parent Company of the Sullivan Motor Car Company was established in 1882 by Hughson & Sullivan, pioneers in the wholesale carriage business. In 1889 the name of the company was changed from Hughson & Sullivan to Sullivan Brothers. T. J. Sullivan, founder of the company, is still actively connected with the business. The firm of Sullivan Brothers is still engaged in the wholesale carriage business and in the same plant in which they started. In 1911 the Sullivan Motor Car Company was formed and the Sullivan commercial vehicles have been produced in quantities from that time. The personnel of the Sullivan Motor Car Company includes T. J. Sullivan, D. E. Sullivan and George T. Sullivan.

The Sullivan Motor Car Co.
Rochester, N. Y.

The Truck Buyer Today Buys Value

The problem the dealer must meet is that of efficiency.

The dealer must guarantee the definite service of every truck sold—to succeed, that guarantee must be realized by the purchaser.

The guarantee of service means that the machine must be equal to all requirements—the necessity of making this guarantee, is a potent reason for dealers to market the

NEW 1915 SULLIVAN MOTOR TRUCK

Which is the development from 30 years' study of motor vehicle problems. The first Sullivan Motor Truck, built four years ago, has proven the worth of these machines. It is doing work daily, as well as when placed in service. The

NEW 1915 SULLIVAN MOTOR TRUCK

Has been proven by long continued service in all conditions of operation.

Its Development Was Logical Perfection of a Standard Type

Careful study of the transportation departments of hundreds of merchants and manufacturers proved that the greatest number require vehicles of 3000 pounds maximum load capacity, and the 1915 Sullivan Motor Truck was designed to serve the purposes of the business interests that constitute the largest and most constant market.

This Means the Biggest Field for Sullivan Truck Dealers

The price is $1600, and this buys the highest quality that can be put into a machine—a quality that the builder and the dealer can in every way guarantee—a quality that means constant service, long endurance and maximum economy.

The Sullivan 3000 Pound Truck is the Greatest Value the Industry Has Produced

Live wire agents can make many sales, make big profits and establish themselves as leaders of the motor vehicle trade.

The best oil in the market is the most profitable in the end

There's money in handling "quality" goods of any kind—they mean repeat orders, the sure building up of a business—big profits in the end.

Here's a quality oil from a Pennsylvania base, the result of our 30 years' experience with lubricating oils. Its flash and fire tests, its viscosity and lubricating value in the heat of the combustion chamber, its small residuum of carbon, make it the most nearly perfect lubricant ever put on the market.

VEEDOL

When you sell Veedol you sell Service---the most lubrication with the least carbon deposit.

Veedol will be a business-builder for you, because a car owner who buys it gets lubrication, not merely oil. He gets more mileage for his money and freedom from costly repairs. He gets satisfaction, and he will be back for more of it at the same price.

We want responsible representatives for Veedol everywhere. If there is no agent near you, write at once for terms and for full information of our intensive consumer advertising for Veedol.

THOUSANDS OF FORDS BEING SHIPPED DAILY

LIVE WIRE DEALERS: Every Ford Owner a Prospect For a

BOSTON STARTER

$25.00 F.O.B. Boston **Made Especially for FORD Machines. Will Start the Engine From the Seat.**

DEALERS AND AGENTS—We have a proposition that is worth while. Get busy with the Ford owners. Write today for literature, terms and discounts.

THE BOSTON STARTER eliminates labor, annoyance and insures against injury. A proven device that automatically retards the spark and prevents "back-kicks." Places the car in the same class for comfort as the most expensively equipped vehicle.

THE BOSTON STARTER is mechanically perfect, compact, ruggedly constructed, built for years of endurance completely concealed, easily installed or removed, and adds but little weight. No changes necessary to install it, and any mechanic or experienced motorist can do the work. No springs, batteries, motors or other possibilities for complication. Always ready and always serviceable. Thousands in use.

OWNERS—**If your dealer cannot supply you, write us. A postal will bring you information, and for a check for $25.00 we will ship a starter, f. o. b. Boston, Mass.**

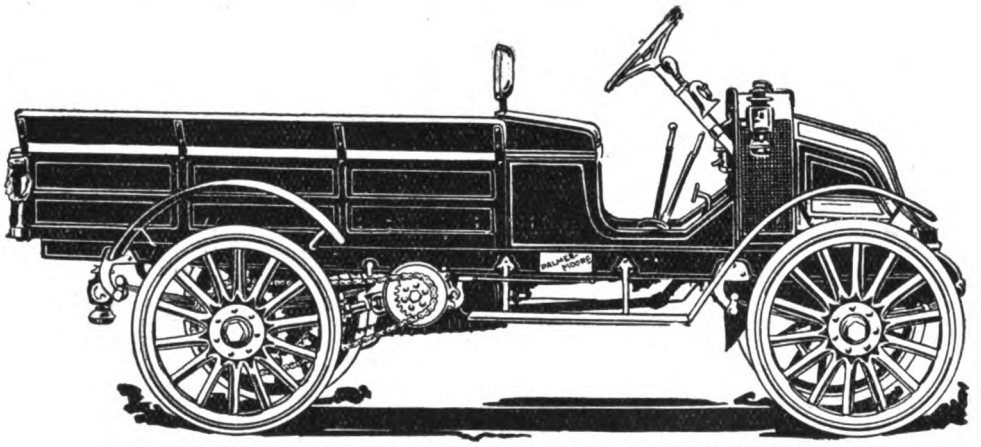
PALMER SERVICE PM DEPENDABILITY MOORE TRUCKS

Efficiency and Economy—the Test of Truck Fitness

20 PALMER-MOORE TRUCKS

Ordered by the Clearing House Parcel Delivery Company of Boston, Mass.



Palmer-Moore Open Express Body. Price $1425.00

The Clearing House Parcel Delivery Company of Boston has just ordered twenty Palmer-Moore trucks. This is one of the largest single orders received by any truck manufacturer this year. It came as the result of a competitive examination of a number of the leading makes. Exhaustive demonstrations were held for over four weeks and every possible test made to demonstrate the availibility of the different trucks for the special services wanted. Particular attention was paid to engine control, flexibility of motor, tire economy, ease of handling in congested districts, and the ability to meet promptly the varied demands of parcel delivery service in Boston and over one hundred outlying towns.

The spring buying season is on in full swing. We want to hear from live dealers in unoccupied territory. Remember, wherever there is a truck prospect there is a possible Palmer-Moore sale. Write us today.

1600 lbs. capacity. All styles of bodies.

The Multibestos Cabinet
A Dealer Help

Why bother with loose rolls of brake lining kicking around the shop? With the MULTIBESTOS Cabinet you can save both time and money.

The Cabinet is ornamental as well as useful, and it will add much to the appearance of your store.

Every live dealer should have one of these Cabinets—not only because of its own worth, but also because with MULTIBESTOS in stock he attracts the trade of the worth-while-buyer—the man who is just a bit "fussy" about what goes into the equipment of his car. For the car owner who has once tried MULTIBESTOS and seen for himself how it compares with other brake linings will always come back again and buy, not "just brake lining," but MULTIBESTOS—with a capital M.

Won't you let us tell you more about this Cabinet and the other special helps that we offer free to dealers handling **MULTIBESTOS?**

This shows how MULTI-BESTOS may be handled neatly and quickly.

"Safe in the grip of Multibestos."

FORD COMPANY "LAYING OFF" EMPLOYEES.

Bulletin Posted in Factory Advises Men Who Had Their Salary Doubled to Secure Work Elsewhere---Industrial News of the Manufacturer and the Trade.

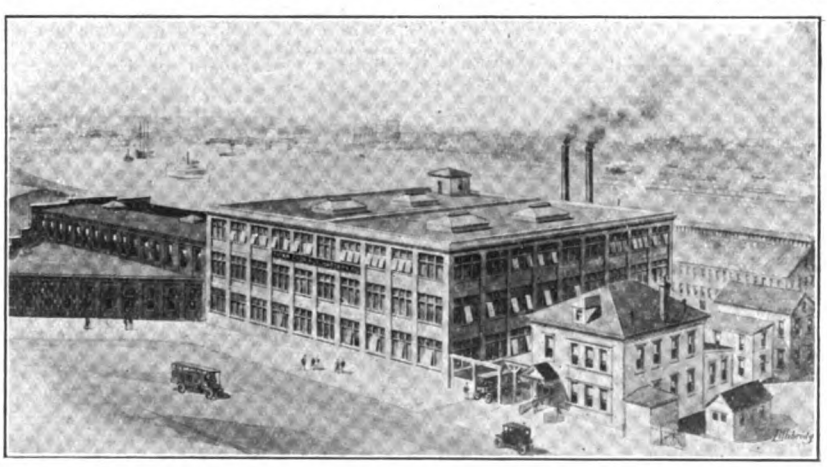
THE Ford Motor Company, Detroit, has posted the following bulletin throughout the factory:

In the regular course of business we have reached the quiet season. In line with our policy to be just and fair to the individual employee, we have planned as follows: Employees will be given a leave of absence, without pay, or, if you please, laid off for a period of 30 days. If, during the leave of absence or "laid off" period, the employee can find other employment, the company recommends that he do so. If at the end of 30 days our men have found no other employment and desire to return to work, they may apply and the company will endeavor to find employment for them.

It is explained by James Couzens, vice president of the company, that men will be laid off in rotation if necessary, single men first and married men only after being held as long as possible. It will be remembered that the Ford company recently established a profit sharing plan, under which the wages of employees were doubled, and a number of new employees were added. Concerning this phase of the situation, Mr. Couzens is quoted as follows:

When we established the profit sharing plan we knew that we could not employ all the men all the year round, but we thought we were giving them sufficiently high pay, so that they could afford to lay off a month in the summer time. I cannot say at present what is the total number of 1000 a week for the unusual about this men we shall lay off. It may average next six weeks. There is nothing lay off, as it comes every year.

It may be added that the Ford Motor Company has just declared an extra cash dividend of 100 per cent., or $2,000,000. This took place on the 11th anniversary of the organization of the company, and it is stated that Henry Ford, with 56.5 per cent. of the 20,000 shares of common stock, received $1,170,000, and James Couzens with 10.9 per cent. got $218,000. Other large shareholders and the amounts they are said to have received are: John F. Dodge, Horace E. Dodge, Horace H. Rackham and John W. Anderson, $100,000 each; David Gray estate, $210,000; R. V. Couzens, $2000. A similar cash dividend was declared last year.



General View of the New Plant of the Titan Storage Company, Recently Opened at Chapel Street and Lister Avenue, Newark, N. J.

NEW NAME AND NEW PLANT.

Announcement is made by the Baltimore Electric Storage Battery Company, Baltimore, Md., that the name of the concern has been changed to the Titan Storage Battery Company. It also has secured new quarters at Chapel street and Lister avenue, Newark, N. J., where the offices of the company have been established for some time, and manufacturing equipment is now being installed. Shipments of Titan vehicle batteries (Plante type) and and lighting, ignition and starting batteries from the new location already have begun.

The officers of the Titan Storage Battery Company are: President, Henry M. Keith; vice president, Daniel C. Spruance; treasurer, Edward S. Hyde; secretary, Henry H. Hanson; board of directors, the officers and Minor C. Keith and John G. Gray; general manager, Dr. W. E. Winship; sales manager, A. H. Mustard; superintendent, Eugene Handler.

It is stated that no change in policy is contemplated as the result of the change in name. The control still remains in the hands of Minor C. Keith, vice president of the United Fruit Company and president of International Railways of Central America. An accompanying illustration shows a portion of the new plant, which affords ample room for a large business.

NEW HOLTZER-CABOT FACTORY.

Ground has been broken for the erection of a new factory of the Holtzer-Cabot Electric Company, Brookline, Mass., and Chicago, Ill., on Armory street, Roxbury, Mass. It will be six stories high, with an ell of the same height, and will be of modern construction and equipment throughout. It is expected that it will be ready for occupancy early in 1915.

The Holtzer-Cabot company began business in Brookline, Mass., in 1875, specializing in electrical equipment. At that time the electrical industry was in its infancy, but the growth of the business was rapid, and when the automobile began to make itself felt in industrial fields this concern became one of the pioneers in motor car equipment. Its line includes carburetors, ignition devices, lighting systems, horns, etc. The new factory is being erected because the growth of the business during the past year has made it advisable to concentrate the various departments under one roof.

THE W. J. CONNELL COMPANY.

W. J. Connell is president of the W. J. Connell Company, 171 Massachusetts avenue, Boston. He has been engaged in the automobile business as manufacturers' representative for the past eight years, being the first, and for some time the only, man to engage in that line of business in New England. The original accounts were those of the Edmunds & Jones Manufacturing Company, the Dow Manufacturing Company and the Teel Manufacturing Company.

W. J. Connell, Boston's Pioneer Manufacturers' Representative.

The business has increased steadily, the total for the first year being about $12,000, while last year it was practically $1,000,000. The original headquarters were at 36 Columbus avenue, where the concern was located for five years. It then removed to 555 Boylston street, where it remained for 2.5 years. Recently it moved into the new building at 167-171 Massachusetts avenue, a structure erected for its particular purpose.

The companies represented at present are: Wheeler & Schebler, Indianapolis, maker of Schebler carburetors; Edmunds & Jones Manufacturing Company, Detroit, maker of lamps; Elite Manufacturing Company, Ashland, O., jacks; Gabriel Horn Manufacturing Company, Cleveland, O., Gabriel horns and rebound snubbers; Sparks-Withington Company, Jackson, Mich., fans, motor driven pumps and Sparton horns.

Mr. Connell says he has sold every manufacturer in the New England states some goods at some time. The company has on its list of customers the most representative jobbers in the New England territory.

CAMERON COMPANY'S FAILURE.

The Cameron Manufacturing Company, New Haven, Conn., has filed a schedule in bankruptcy, showing liabilities of $121,998.38, including secured claims amounting to $91,858.50, and unsecured claims totalling $28,275.59, and assets of $48,631.47, represented in real estate, amounts due on open accounts and $8.30 cash in the bank. The real estate is subject to a mortgage to the Parmalee company and to Pierpont B. Foster, and the machinery, fixtures and tools to a $40,000 mortgage. Included in the assets, also, are claims against a number of men who subscribed for stock and who have not paid up.

The concern formerly was located in Beverly, Mass., as the Cameron Car Company. E. S. Cameron, head of the company, was one of the pioneers of the industry, having built his first car in Brockton, Mass., in 1901. For some time past Mr. Cameron and others connected with the Cameron Manufacturing Company have been interested in the formation of the Euclid Motor Car Company, with headquarters in New York. This concern is to manufacture a cyclecar of the light car type.

It is stated that a cyclecar company has made a proposition to the court, involving the use of the factory, this concern to pay all the cost of production and turn the net profit over to the Cameron estate. The court continued the matter for two weeks, in order to give the stockholders time to think over the proposition.

THREE NEW TRUCK COMPANIES.

The Reedsburg Motor Truck Company, Reedsburg, Wis., has been incorporated with capital of $100,000 for the purpose of manufacturing a line of motor trucks formerly produced by the Piggins Manufacturing Company, Racine, Wis. Among the incorporators are E. E. Montgomery, Edward Thom, J. Scanans and E. M. McNab. The last named formerly was designer for the Piggins company.

The Britton-Stevens Corporation, which was organized recently in Cambridge, Mass., is building the Bay State truck in that city. The designer is said to be W. C. Guilder, formerly identified with the maker of the Mack truck in Allentown, Penn. He has been made vice president and general manager of the company.

W. H. Steele, Worcester, Mass., has begun the manufacture of the Steele truck. It is understood that among its distinctive features are a new speed controlling device invented by the maker and the use of larger wheels than standard. Mr. Steele formerly made commercial vehicles, utilizing some of the parts of the Morgan truck, which was produced in Worcester, and the assets of which he purchased in 1912.

KNOX MOTORS COMPANY.

The property of the Knox Automobile Company, Springfield, Mass., was purchased at bankruptcy sale, April 29, by Edward O. Sutton, whose bid was $631,090. Subsequently the Knox Motors Company was organized with capital of $2,500,000, one-half preferred and one-half common, to take over this property. The officers of the new concern are: President, Harry G. Fisk; treasurer, E. O. Sutton; clerk, C. H. Beckwith.

It is announced that the new company will continue the manufacture of Knox pleasure cars, trucks and fire apparatus, and Knox-Martin tractors for general haulage and fire department service. To make room for the new product all the present limited stock of pleasure cars and trucks is being sold as rapidly as possible.

EMPLOYEES BUYING STOCK.

It is stated in financial circles that the United States Rubber Company, of which the United States Tire Company, New York City, is a constituent, is making it possible for its employees to purchase common stock on a partial payment plan at $60 a share. This price is understood to compare with $65 in 1913 and $45 in 1912.

Last year a total of 5.5 per cent. was paid in cash dividends, and four per cent. in 1912. A 20 per cent. extra stock dividend also was paid in 1912. For 1914 it is understood that the subscribing employees will receive the regular six per cent. dividend, and, in addition, an extra cash, dividend of three per cent. a share. At the above price, $60 a share, this disbursement yields the employees 15 per cent. on their money.

LITIGATION IS WITHDRAWN.

Announcement is made of an agreement between the Lovell-McConnell Manufacturing Company, Newark, N. J., maker of Klaxon horns, and the G. Piel Company, Long Island City, N. Y., maker of Long horns, whereby each concern will continue the production of its present types of hand operated signals under their several patents. In addition, the latter concern is to develop and place in the market a line of motor driven electric horns of similar construction to its hand operated product. The litigation in which these companies have been involved for some time has been discontinued. The H. W. Johns-Manville Company will continue to market all the horns manufactured by the G. Piel Company.

BUY COLUMBUS BUGGY PLANT.

According to a dispatch from Columbus, O., the plant and business of the New Columbus Buggy Company, organized recently by the creditors of the Columbus Buggy Company, which went into the hands of a receiver early in 1913, have been purchased by Charles A. Finnegan and Eugene D. Hofeller of Buffalo, N. Y. Mr. Finnegan recently purchased the assets of the E. R. Thomas Motor Car Company in Buffalo, and it is added that these undoubtedly will be removed to Columbus.

Digitized by Google

ANOTHER ORDER OF SALE.

At the contemplated sale of the property of the Walpole Tire & Rubber Company, Walpole, Mass., scheduled for May 11, only one bid, of $800,000, was filed, and the sale was declared off by Judge Dodge of the United States district court. This bid was made by C. G. Metzler, representing the stockholders' reorganization committee, and was far below the upset price of $1,500,000 fixed by the court. The receivers have been instructed to draft another order of sale. It is understood that the stockholders' committee has submitted a new reorganization plan in anticipation of the next sale date.

TO MAKE KNUTSON STARTER.

The Automatic Devices Company, Galesburg, Ill., owner of the patents for the Knutson automatic engine starter for automobiles, has contracted with the Frost Manufacturing Company of that city for the production of 6000 of these to be made in various sizes. The device is the invention of A. W. Knutson, who is better known in connection with his invention of the trolley retriever used by electric street cars, and it is stated that it involves some of the principles of the latter. The officers of the company are: President, F. N. Clark; vice president, R. C. Wharff; secretary, E. P. Roberts; treasurer, E. M. Wharff; directors, the above and C. F. Hurburgh, H. A. Niven and A. W. Knutson.

AMERICAN-LA FRANCE FIRE ENGINE.

The following quotation from the Wall Street Journal regarding the American-La France Fire Engine Company, Elmira, N. Y., will prove of interest to the automobile industry generally:

"American-La France Fire Engine Company is now having the best business in its history, which is rather an anomalous condition with industrial plants just now. The company is working day and night at its factory and has been compelled to enlarge two of its departments. It has more than $1,000,000 of business on its books and orders for the current year have exceeded those received in the same time last year. The cause for this condition is found in the ready sale with which municipal bonds are meeting. Substantially all of the business of the company is done with municipalities and none of these is finding any difficulty in financing requirements. As a result many orders are being placed for fire fighting equipment, and collections with the company are excellent, it having a large cash balance in bank".

NEW SIX-CYLINDER CAR.

The Gary Automobile Manufacturing Company, Gary, Ind., has been incorporated for about $250,000, for the production of a six-cylinder car. Among the incorporators are Dr. G. Pass, who is president; C. J. Flannigan and D. C. Throckmorton. E. T. Birdsall, chairman of the Detroit section, Society of Automobile Engineers, is said to have been retained as consulting engineer and purchasing agent. A factory has been established and plans have been laid for the production of about 100 cars the first year.

REORGANIZE AMPLEX COMPANY.

The Amplex Manufacturing Company, Mishawaka, Ind., has been incorporated for $200,000 by Harold M. Pulsifer, E. J. Gulick and R. W. Randall, to take over the assets of the Amplex Motor Car Company, which were sold to these parties recently. The Amplex Motor Car Company formerly was the Simplex Motor Car Company, and built the Amplex car for some years. At the time of the sale it was announced that the purchasers intended to produce a medium priced car.

ADDITION TO PLANT.

The Four Wheel Drive Auto Company, Clintonville, Wis., has begun work on the erection of another addition to its plant, to be known as unit No. 6. It will be 40 by 80 feet and will be used as a paint shop. This will give the concern a complete plant in every detail. It will have approximately 46,000 square feet of ground covered with solid brick buildings.

AGAIN ANTICIPATES OBLIGATIONS.

According to the Wall Street Journal, the General Motors Company, Detroit, has purchased, for the sinking fund, $2,000,000 of its six per cent. first lien, five-year gold notes, in anticipation of its obligation to pay, Oct. 1, $2,000,000 cash to the trustees for sinking fund purposes. This makes a total of $7,099,000 in notes that nave been purchased, leaving outstanding $7,901,000, which will mature Oct. 1, 1915.

TO REBUILD OLD CASINGS.

The Motor Tire Reconstruction Company has been incorporated under New Jersey laws, with capital of $250,000. It is stated that the business of this concern will be that of rebuilding worn-out casings, in contradistinction to the usual practise of retreading them. The process is said to be the invention of I. S. McGhiehan, who is interested in the manufacture of Mogul tires, and to be practically the same as that used by that concern. It is planned to establish agencies in practically every city and town of consequence in the country, and to supply full equipment and a license to use the process within a particular district.

NEW MODEL ENGINE PLANT.

Contracts have been awarded and ground has been broken for the new plant of the Pittsburg Model Engine Company, Pittsburg, Penn., a reorganization of the Model Engine Company, Peru, Ind. There will be three buildings, the main structure being 247 by 235 feet, the power plant 67 by 67, and the office building 50 by 80. The company will continue to operate its Peru plant until further notice, and will specialize in the Pittsburg plant on the production of the new Carter piston sleeve valve engine, which it owns and controls.

SELLS ITS SPRING BUSINESS.

The Lewis Spring & Axle Company, Jackson, Mich., has disposed of that portion of its business devoted to the manufacture of springs to a company styled the Alloy Steel Spring Company, of which the following are officers: President, Fred Keiser, vice president of the Lewis company; vice president, Casper Haehnie; secretary and treasurer, A. L. Wuster. Under the terms of the sale the Lewis interests acquire the E. C. Clark Motor Company of Jackson, of which Mr. Lewis is treasurer. Except that springs will hereafter be made by the Alloy Steel Spring Company, which has purchased a plant for that purpose from the Lewis company, the latter concern will continue its business as in the past.

INCREASES IN CAPITAL STOCK.

Leslie Motor Car Company, St. Joseph, Mo.; from $2000 to $5000.

Cleveland Automobile Company, Cleveland; from $10,000 to $30,000.

Sharrer Patent Top Company, New York City; from $25,000 to $100,000.

Vulcan Manufacturing Company, Painesville, O.; from $200,000 to $300,000.

Motor Supply & Tire Company, Cleveland, O.; from $1000 to $50,000.

John W. Brown Manufacturing Company, Columbus, O.; from $370,000 to $400,000.

C. T. Ham Manufacturing Company, Rochester, N. Y.; from $100,000 to $200,000.

Cuyahoga Spring Company, Cleveland, O.; from $20,000 to $30,000.

Commercial Auto Company, Lexington, Ky.; from $12,000 to $25,000.

Auto Parts Company, Chicago, Ill.; from $200,000 to $1,000,000.

Sandow Truck Company, Chicago, Ill.; from $5000 to $200,000.

Atkins Carburetor Company, Chicago, Ill.; from $2500 to $32,500.

Walker Starter Company, Laporte, Ind.; from $30,000 to $50,000.

DIVIDENDS DECLARED.

B. F. Goodrich Company, Akron, O.; quarterly, preferred, 1¾ per cent.; payable July 1 to stockholders of record June 19.

Swinehart Tire & Rubber Company, Akron, O.; quarterly, 1½ per cent.; payable May 10.

Stewart-Warner Speedometer Corporation, Chicago; quarterly, preferred, 1¾ per cent., payable May 1. Quarterly, common, 1½ per cent., payable May 1.

Vacuum Oil Company, Rochester, N. Y.; semi-annual, $3; payable May 5.

International Harvester Corporation, Chicago; quarterly, preferred, 1¾ per cent.; payable June 1.

Studebaker Corporation, Detroit; quarterly, preferred, 1¾ per cent.; payable June 1 to stockholders of record May 20.

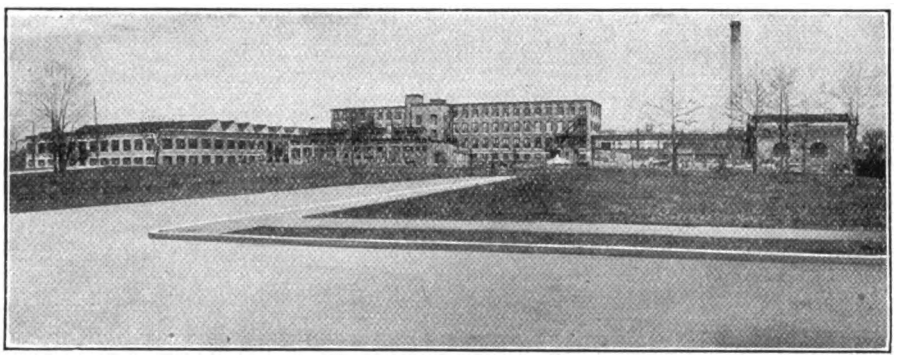
GENERAL NEWS OF THE MANUFACTURERS.

The Weed Chain Tire Grip Company, New York City, has removed to its new and large modern factory at Bridgeport, Conn., where all of its activities will be concentrated in the future. It is stated that the company produces over 60 miles of chain a day.



View Showing the Front of the New Plant of the Weed Chain Tire Grip Company at Bridgeport, Conn.

The Kelly-Springfield Motor Truck Company, Springfield, O., recently closed a contract for 104 five-ton trucks and one two-ton truck for the Pacific Motor Coach Company, Los Angeles, Cal., which it claims constitutes the largest sale of motor driven vehicles direct to the consumer ever consummated. The order is said to represent $500,000.

The Maxwell Motor Company, Detroit, is now prepared to furnish repair parts for the two-cylinder cars formerly made by the Maxwell-Briscoe Company, from its parts plant at Newcastle, Ind.

The Emil Grossman Manufacturing Company, Inc., Brooklyn, N. Y., has been licensed under the Hammond patent, No. 1,086,820, dated Feb. 10, 1914, to manufacture the Holdfast battery connector. The company is the first and thus far the only manufacturer to be licensed under this patent.

The Keller Pneumatic Tool Company, Fond du Lac, Wis., which was organized recently, has commenced the manufacture of a line of compressed air tools of all kinds and will make a specialty of garage and repair shop devices.

The General Motors Truck Company, Pontiac, Mich., has just completed additions to its equipment, having installed a 100,000-gallon reservoir as an added protection against fire. A number of cement floors also have been put in the factory.

The Milwaukee Cyclecar Company, Milwaukee, Wis., manufacturer of the Billiken cyclecars, has elected the following officers: President, Stanley H. Eigel; vice president, Samuel P. Carroll; secretary and treasurer, Fred W. Bollow. Mr. Carroll is also chief engineer.

The Hudson Motor Car Company, Detroit, announces the shipment of the new five-passenger light six model to its dealers.

The Armstrong-Johnson Company, Columbus, O., which was incorporated recently with a capital stock of $10,000, is a partial reorganization of the Barndt-Johnson Company of South Columbus, which went into the hands of a receiver about a year ago. The company will make automobile tops, bodies and other supplies.

The Joseph Dixon Crucible Company, Jersey City, N. J., held its annual meeting of stockholders recently. The retiring board of directors, consisting of George T. Smith, William Murray, George E. Long, Edward L. Young, William G. Bumsted, J. H. Schermerhorn and Harry Dailey, were unanimously re-elected.

The United States Light & Heating Company, New York City, will move its general office to the company's large plant at Niagara Falls, N. Y. This transfer will result in bringing together the administrative, sales, engineering and production departments, and is expected to insure the most effective conduct of all in the interests alike of patrons and stockholders.

The Semple Rubber Company, Trenton, N. J., is a new manufacturing company to make inner tubes. C. H. Semple, at one time president of the G. & J. Tire Company, Indianapolis, and also president of the Empire Tire Company, Trenton, is president. F. A. Drake is treasurer and R. H. LaPorte secretary.

The Packard Motor Car Company of Paris, France, has established a branch office and service station, also a rental depot, in London, England, at 7 Lower Belgrave street, near Buckingham Palace road. It will carry a complete supply of parts.

The Moline Automobile Company, East Moline, Ill., has made extensive improvements to its already large plant. In order to keep abreast of the orders for the Moline-Knight car, the entire factory is running 12 hours a day, and the automatic machinery night and day.

The Perkins-Campbell Company, Cincinnati, O., announces that its new Ford specialties and general catalogues are now ready. The former covers the company's line of leather Ford goods and seat covers, and the latter lists all leather specialties for automobile work.

The Reo Motor Car Company, Lansing, Mich., held a special stockholders' meeting May 19 for the purpose of declaring a stock dividend of 100 per cent., payable in July.

The Apperson Bros. Automobile Company, Kokomo, Ind., has established a direct factory branch at Pittsburg, Penn., at 297 Center avenue, with Nelson B. McClain in charge as manager.

The Bosch Magneto Company, New York City, states that the 12-cylinder Sunbeam car which covered the half-mile at the Brooklands track, England, on March 18 last, in 0:15.03, averaging 119.6 miles an hour, and which covered the mile in 29.82 seconds, averaging 120.78 mph, was equipped with a Bosch magneto.

The Hillard Clutch & Machinery Company, Elmira, N. Y., manufacturer of multiple disc clutches for automobiles, has taken over the business of the Elmira Pattern Works.

The Woods Motor Vehicle Company, Chicago, Ill., announces that it has opened a large and elaborate salesroom at Michigan avenue and Peck court, one block south of the Blackstone hotel. The factory showrooms of the company are located at 25th street, Calumet and Cottage Grove avenues.

The Reo Motor Car Company, Lansing, Mich., reports the production of 65 cars daily. Last year at this time 40 cars was the limit of production, but additions to the plant and increased factory facilities have resulted as above.

The Apple Auto Top Company, Miamisburg, O., contemplates the erection of a large factory on Smith street. The structure will be two stories in height and 250 feet in length. The company manufactures automobile tops and casings.

The Herreshoff Light Car Company, Troy, N. Y., has been incorporated and will manufacture a small four-cylinder, water-cooled car, which it expects to be in a position to deliver in quantity by July 1.

Dodge Bros., Detroit, manufacturer of pleasure cars and accessories, has awarded contracts for the construction of a four-story reinforced concrete factory building to be used mainly as a woodworking shop. It is stated that the new car to be produced by this company will sell for less than $600.

Gray & Davis, Inc., Boston, Mass., has reduced its factory time schedule from 52 hours a week to 50. In addition to increasing the time the men have to themselves, the new schedule also provides for added remuneration for overtime work and therefore does not in any way involve a reduction in wages.

Digitized by Google

Wilson & Short, Detroit, is to purchase the plant of the Standish Manufacturing Company at Ingersoll, Ont. The company will install machinery and equipment and will manufacture automobile specialties.

The Haynes Automobile Company, Kokomo, Ind., has established a factory branch at 1708 Grand avenue, Kansas City, Mo., which will care for the business of the company in the states of Missouri, Oklahoma, Kansas, Nebraska and Arkansas. J. C. Barcus will be in charge as manager.

The Killen-Strait Manufacturing Company, Appleton, Wis., is to manufacture tractors and commercial cars. The concern has been reorganized, formerly being known as the Killen-Walsh Manufacturing Company, and will greatly enlarge its business and manufacturing facilities. Work has started on additions to its plant. The development and experimental work is said to have been brought to a successful issue.

The L. P. C. Motor Company, Racine, Wis., has leased additional room in the former Racine-Sattley Carriage Works, Racine Junction, a large part of which is already used by the company.

The P. B. M. Manufacturing Company, Los Angeles, Cal., is erecting a new and up-to-date plant for the manufacture of cyclecars and small automobiles. The factory will be electrically operated.

The Wheeler & Schebler Company, Indianapolis, manufacturer of the Schebler carburetors, has joined the group of accessory manufacturers to award additional prizes to the successful drivers at the 500-mile race, May 30. This company will distribute $1600 among the first four drivers if their cars are equipped with Schebler carburetors. The first prize will be $1000; second, $300; third, $200, and fourth, $100.

The Whitney Manufacturing Company, Hartford, Conn., has just completed an addition of 27,000 square feet to its plant, which is being equipped with modern machinery.

The Abbott Motor Company, Detroit, is now making parts for the Michigan car, formerly made by the defunct Michigan Buggy Company, Kalamazoo, Mich. A special department has been set aside for this purpose in the new building.

The Harrison Manufacturing Company, Lockport, N. Y., has leased a factory building at Detroit and will produce the Harrison radiators in that city. Gould Allen, who is manager of the Detroit office of the company and representative for the Covert Motor Vehicle Company, which is financed by the same capital, will be manager of the new factory.

The A. R. King Manufacturing Company, Kingston, N. Y., has established offices at 50 Church street, New York City, with William C. Hunter in charge as sales manager. King trucks are produced by the concern.

The Santo Rubber Company, Pittsburg, Penn., has purchased six acres of land at Niagara Falls, N. Y., and awarded a contract to erect a large plant, costing $60,000. The company will manufacture automobile tires and other rubber goods.

The Standard Motor Truck Company, Detroit, maker of three and five-ton trucks, is now located in its new factory on Bellevue avenue. Albert Fisher, president and treasurer of the company, who owns controlling interest, has purchased adjoining property and will build when additional business warrants it.

The Universal Machinery Company, Milwaukee, Wis., manufacturer of the Mack motor for cyclecars, is now shipping from 25 to 30 motors a day and will almost double this quantity when the additions to the large plant are completed.

The Hayes Ionia Body Company, Ionia, Mich., has started the erection of a large addition to its plant to cost $20,000. This step was taken in order to produce 150 bodies a day.

The Motz Tire & Rubber Company, Akron, O., recently established three new distributing stations in the Central West. The Electric Garage, Fort Wayne, Ind., and the South Bend Rubber Company, South Bend, Ind., were added to the company's representation in Indiana. Gietl Bros. is now distributor of Motz tires in the territory adjacent to Springfield, Ill.

The Volute Spring Shock Absorber Company, Mount Vernon, N. Y., is the name of a new concern organized to manufacture a new type of spring absorbing device for motor cars. Among those who are interested in the project are Edward M. Benford, Mark D. Stiles and John G. Rock.

The Dort-Wiley One Lady Top Company, Detroit, held its annual meeting recently and the following officers were elected: President and treasurer, H. W. Wiley; vice president and general manager, Emmis J. Beattie; secretary, Walter Stowers; superintendent of construction, Walter Dort.

The J. F. Cram Automobile Company, Geneva, N. Y., will manufacture motor fire apparatus.

The Splitdorf Electrical Company, Newark, N. J., has opened new branches and service stations recently as follows: Cincinnati, 811 Race street; Dallas, Tex., 402 South Ervay street; Dayton, O., and Toronto, Ont., 469 Yonge street. H. J. Hinley, manager of the long established Detroit, also supervises the branches in Cincinnati and Dayton. E. A. Kelly, Chicago sales manager, has placed E. C. McKinney in charge of the Dallas office, while he is preparing to open a branch in Minneapolis, Minn. O. J. Rohde, who looks after the company's interests in New York, Newark, Philadelphia and Atlanta, also supervises the Toronto branch. In addition, C. O. Dail, for several years associated with the sale of Swinehart tires, has been placed in charge of sales for the western territory with headquarters in Chicago. He takes the place made vacant by Fred Connell, who is now manager of the Apple Electric Company, Dayton, O., recently acquired by the Splitdorf concern.

The Motor Materials Company, New York City, has put on the market a new starting device for Ford cars.

The Packard Motor Car Company of Paris, Paris, France, the foreign branch of the Packard Motor Car Company, Detroit, has established a branch office, service station and rental depot in London, England, at 7 Lower Belgrafe street, close to Buckingham Palace road. It will carry a complete supply of parts and provide the same technical attention that characterizes this company's other branch houses.

The Miller Rubber Company, Akron, O., has opened a new branch at 429 North Meridian street, in that city, in charge of Messrs. Broering and Ruske, both of whom have had long experience in this field. An accompanying illustration presents the interior of the salesroom. A service station will be maintained as well.

The Emil Grossman Manufacturing Company, Inc., Brooklyn, N. Y., has at the request of the management of the Indianapolis motor speedway, repeated the offer of cash prizes to entrants in the 500-mile race, May 30, as follows: First prize, $500; second prize, $250; third prize, $100. These prizes will be paid providing the drivers finishing in the order named use Red Head spark plugs exclusively in the race.

The Ford Motor Company, Detroit, has secured permission to erect a plant at Pittsburg flush with the street line on Baum boulevard and along Morewood avenue. The building will be 11 stories high and will cost about $1,000,000. It will be used for an assembly plant. Work has already commenced.

Charles W. Nash, President, General Motors Company.

Charles W. Nash, president of the General Motors Company, Detroit, Mich., has assumed the position of vice president and general manager of the Oakland Motor Car Company, Pontiac, Mich., made vacant by the recent resignation of George E. Daniels, who held these offices for four years. The Oakland concern is a constituent of the General Motors Company.

The Clark Engine & Boiler Company, Kalamazoo, Mich., is building a 10-12 horsepower, four-cylinder, water-cooled motor for cyclecars.

The General Motors Truck Company, Pontiac, Mich., has just completed some additions to its equipment. The company has installed a 100,000-gallon reservoir as an added protection against fire. A number of new cement floors have also been put in the factory. The factory force has been largely increased within the past 60 days.

The Bosch Magneto Company, New York City, has recently added to its already long list the following supply stations: Motor Supply & Tire Company, Akron, O.; Albany Garage Company, Albany, N. Y.; Augusta Garage, Augusta, Me.; Bangor Motor Company, Bangor, Me.; Bath Auto & Gas Engine Company, Bath, Me.; Motor Supply & Tire Company, Cleveland, O.; Troy Automobile Exchange, Cohoes, N. Y.; Motor Supply & Tire Company, Columbus, O.; Warren Garage, Elkhart, Ind.; Pearce Street Garage, Gloucester, Mass.; Blair Motor Company, Logan, Utah; Court Motor Car Company, Marietta, O.; George W. Roberts Electric Works, Marysville, Cal.; Minot Auto Company, Minot, N. D.; J. P. Gayle Supply Company, Newport News, Va.; Port Washington Garage, Port Washington, N. Y.; Provo Machine & Foundry Company, Provo, Utah; St. Albans Foundry Garage, St. Albans, Vt.; Jenson Bros. Auto Company, Santa Cruz, Cal.; Gavin-Williams Company, San Diego, Cal.; Troy Automobile Exchange, Troy, N. Y.; Utica Cycle Company, Utica, N. Y.; Morgan & Williams Company, Warren, O.; Brass City Auto Company, Waterbury, Conn.

The Liggett Spring & Axle Company, Cleveland, O., has moved its plant to Monongahela, Penn., where the executive offices are now located. J. H. Newhart, who is the treasurer, will also assume the duties of general manager.

THE ACCESSORY AND GARAGE JOURNAL

VOL. IV. MAY, 1914. NO. 1.

AUTOMOBILE JOURNAL PUBLISHING CO.
Times Building Pawtucket, R. I.
William H. Black, Treasurer. D. O. Black, Jr. Secretary.
Publisher of
THE AUTOMOBILE JOURNAL THE MOTOR TRUCK

Offices in New York, Chicago, Detroit and Boston

SUBSCRIPTIONS.

The United States and Mexico, the year, $2 in advance; Canada and Foreign Countries in Postal Union, the year, $3 in advance. Twenty cents the copy.

CONTRIBUTIONS.

Anonymous communications not considered. Correspondence on subjects relating to the motor industry and the trade will receive attention. Stamps must be enclosed to insure return of unsolicited contributions.

ADVERTISING.

Information supplied at request.

Advertising Copy for the ACCESSORY AND GARAGE JOURNAL requiring submission of proof must be received by 5th of month to insure publication in issue of the 15th of month.

Advertising Copy, proof not required, accepted to morning of the day before publishing day (unless such day is Sunday or holiday, when previous day is limit) of each publication.

Entered as second class matter Dec. 30, 1911, at the postoffice at Pawtucket, R. I., under the Act of March 3, 1879.

APPLYING BUSINESS METHODS.

There is no real reason why the selling of automobiles should be conducted on a different business basis than that of selling any other piece of merchandise. The man who desires a watch selects one that best meets his needs, pays the price which is asked and takes possession of his property. Accompanying the watch is a certain guarantee as to workmanship and material, but this is taken for granted and no attempt is made to influence the salesman to undertake additional obligations.

If automobiles are to be sold in the same manner, the dealer must adopt the same business methods. The owner and prospective owner have every opportunity to inform themselves as to the respective merits of machines selling at various prices. They know what to expect of a given product. They also know that the manufacturer guarantees his product within certain limits. Any attempt to get something additional for the money is a relic of the past—a result of conditions for which dealers and purchasers alike are responsible.

Whether or not the sale of automobiles is to be placed on the proper business basis rests with the dealer. Those who have been in business for some time are aware that it is not the number of cars sold, but the net profit on each sale which marks the dividing point between success and failure.

TRADE MARKS AND TOURING.

Motorists who tour are educated to appreciate the value of standard products. Trade marked goods have a distinct advantage with men who are constantly going from place to place. They are touring for pleasure and not for the purpose of experimenting with untried supplies.

It pays the garage, repair shop or supply station to cultivate this tourist trade. A touring motorist well treated is an invaluable advertising agent. The 1914 season is about ready to open. Now is the time to make the right connections.

SELECTING A SYSTEM.

When business is being conducted at a loss, there is a reason somewhere. The man who wants to succeed is intent upon finding that reason and applying the remedy. This will never be done, in the case of the garage or repair shop which is losing money, without adopting some systematic method of keeping track of the various transactions—one that will afford some definite information as to the sources of income and the disbursement of expenses.

From time to time The Accessory and Garage Journal has presented various systems applicable to the repair shop or garage. No attempt has been made to suggest that these were equally valuable for every need. A careful study of these systems, which, in each instance, have been found intensely practical in actual use, should enable the thoughtful business man to secure exactly what will meet his particular requirements.

BE A SALESMAN.

Nothing was ever gained by knocking the other fellow. Many times the knock becomes a boost. And at the very best, it has a tendency to discredit the whole industry. That kind of salesmanship has little place in the automobile business.

Most prospective purchasers have talked with their friends, who have given the benefit of their experience with certain makes of machines. It is a pretty safe guess that the opinion of the friend will carry a little more weight than that of the salesman who is directly interested in the particular car he is trying to sell. Think this over. Be a salesman.

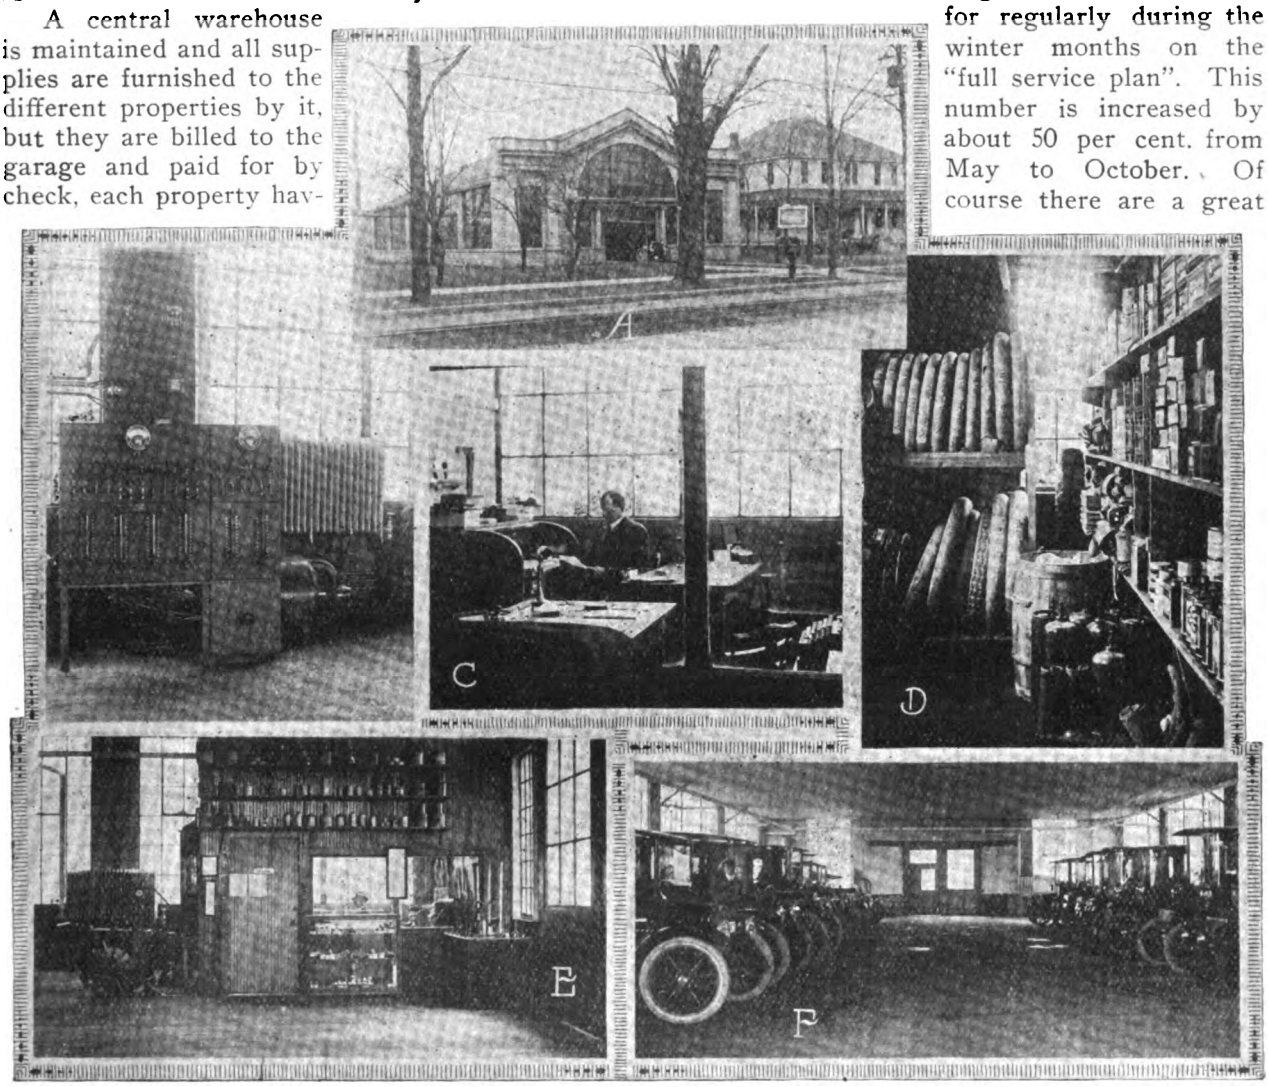
PRACTICAL GARAGE ACCOUNTING SYSTEM.

Detailed Description and Application of Books and Forms Utilized by Grosse Pointe Garage, One of Several Properties Operated by Bean & Seigert.

OPERATING several garage properties, Bean & Siegert, Detroit, and Grosse Pointe, Mich., has devised a garage accounting system which it believes is thoroughly applicable to any garage business. It may be stated that each property operated by this concern has its own manager and individual set of books, and that, insofar as its daily routine is concerned, the method of procedure is the same in every respect as would be true if it were the only one conducted.

A central warehouse is maintained and all supplies are furnished to the different properties by it, but they are billed to the garage and paid for by check, each property having its own bank account and clearing through the warehouse monthly, so that the result is the same as would be true were the goods purchased from the usual sources. For this reason, no forms or methods used by the warehouse will be considered herein.



Views of the Grosse Pointe Garage: A, Exterior as Seen from the Street; B, Portion of the Electric Charging Equipment; C, Interior of Office; D, Stockroom and Tire Rack; E, at the Right of the Entrance Looking Toward the Office; F, Looking Down the Garage Floor.

Buildings and Service.

Accompanying illustrations present exterior and interior views of the Grosse Pointe garage, which is the property under consideration. A blue print plan of the buildings also is reproduced, this showing that the garage proper is 50 by 100 feet, while the repair shop is a separate structure in the rear, 50 by 25 feet. Both are of cement block construction, with cement floors, heated with steam and lighted by 60-watt Mazda lamps.

The usual kinds of service are supplied, but about 11 electrics and 14 gasoline cars are cared for regularly during the winter months on the "full service plan". This number is increased by about 50 per cent. from May to October. Of course there are a great many transients cared for, and the garage has on some nights housed as many as 45 machines.

Working Force.

The working force is made up as follows: Days—The manager, bookkeeper (a young woman who also cares for the telephone calls and does such stenographic work as is necessary), an electrician and a gasoline car man. Nights—An electrician, a gas car man and a washer. The

Reproduction of Blue Print Showing Relative Location of Garage and Repair Shop and Dimensions of Grosse Pointe Garage Property.

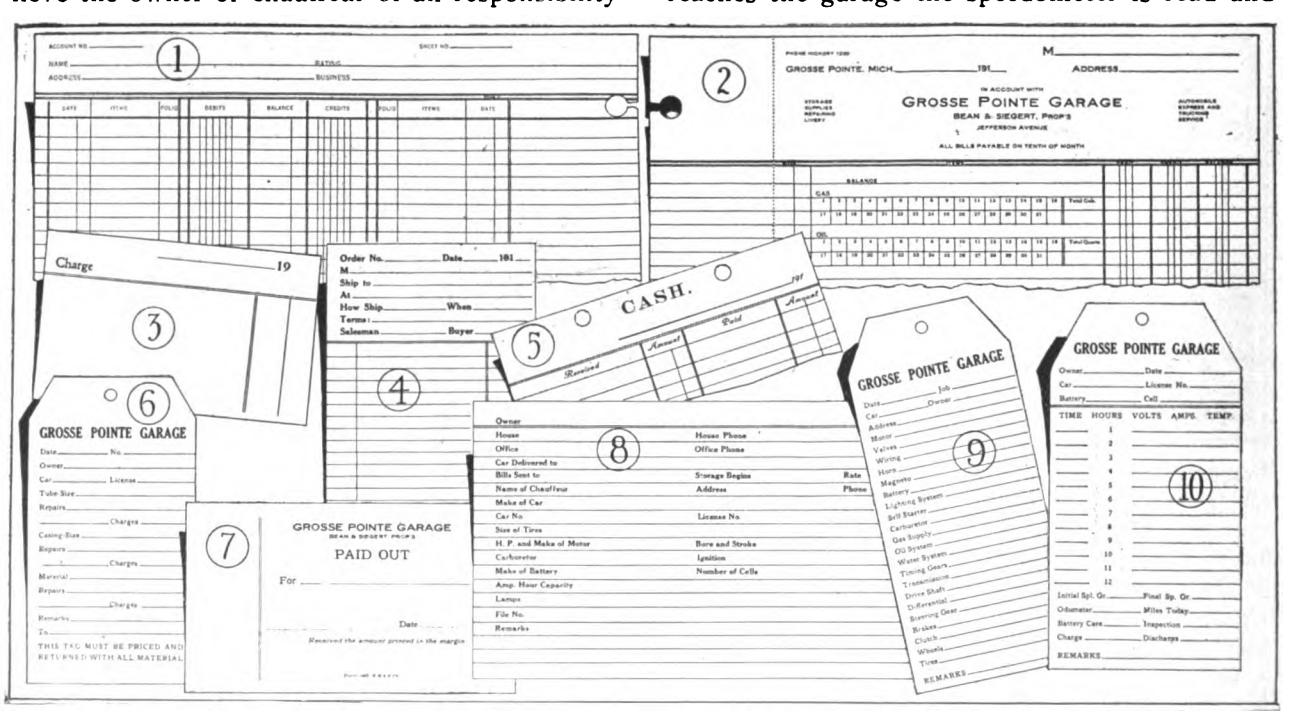
forces change at 7 in the morning and 7 in the evening, between Oct. 15 and May 15, and at 6 the balance of the year. The company is considering the advisability of putting on one other man, to come on at midnight to polish brass and nickel, assist in cleaning the cars until morning and then sweep floors, wash windows, etc., until noon. The day men have every third Sunday off and the night men have one night off until midnight every two weeks, being relieved by day men.

With one or two exceptions all cars are cared for on the full service plan. This consists of calling at the owner's house at night for the car, bringing it to the garage, washing and polishing it, cleaning the upholstery, seeing that the tires are in good condition, filling the tanks with gasoline and oil (if an electric, fully charging it), and delivering the car to the owner in the morning. This service also includes a careful inspection and oiling of every part of the machine once each week. The electrics get full battery care at this time. The idea is to give the owner as much service as is possible for his money, and to relieve the owner or chauffeur of all responsibility as to the maintenance and condition of the machine.

In and Out Book.

An "In and Out" book is kept written up several days in advance, with the names of all regular boarders, their cars and license numbers. Transients are listed as they are called. Someone is in the office to answer the telephone at all times, day or night.

When a car is called to come in the message is recorded at once. A man is then sent with the garage key for the car as soon as possible. His time of leaving for and returning with the car are both recorded. He is allowed 20 to 25 minutes for a half-mile call. He examines the machine carefully before leaving the house, to see that windows, fenders, tires, lights, etc., are in good condition. If anything is found out of order he reports it to the owner at once, and a note is made in the "remarks" column of the In and Out book. Before entering the car the floor rugs are taken up and folded. Car chasers are not allowed to drive faster than 15 miles an hour under any circumstances. As soon as the machine reaches the garage the speedometer is read and



Forms 1 and 2 Face Each Other in a Loose Leaf Ledger, White Paper, 11x10⅜ Inches; 3, Charge Slip, White, 5x3⅛; 4, Chauffeur's Order Blank, White, Duplicate Yellow, 3¾x5¾; 5, Cash Sheet, White, 6x8½; 6, Small Parts Repair Tag, Manila, 3⅛x6¼; 7, Paid Out Slip, Blue, 6x3½; 8, Record Card for Cars, White Board, 8x5; 9, Repair Tag, Manila, 4¼x7; 10, Charging Record, Manila, 4¼x7.

Digitized by Google

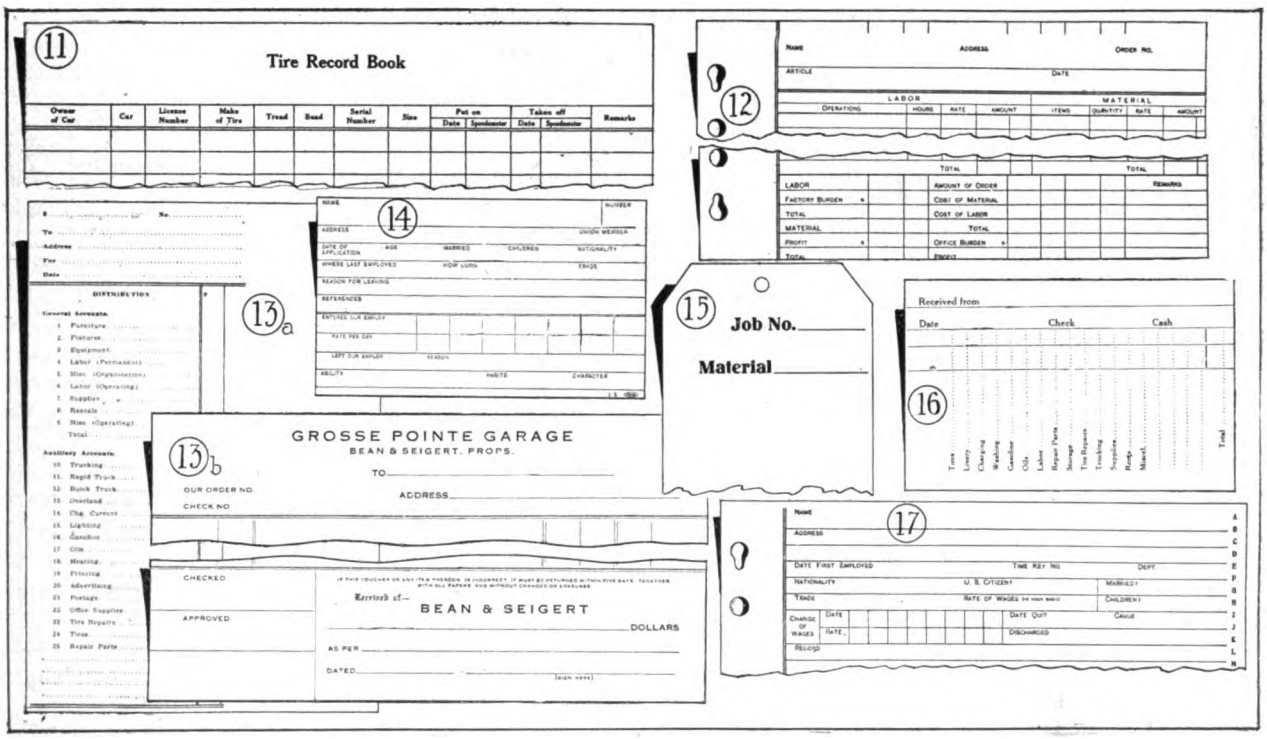
recorded in the proper column in the In and Out book, and the day's trip is calculated. If an electric the mileage is also recorded on the charging card. Tanks are then filled with gasoline and lubricating oil, and the radiator receives attention—in winter alcohol is added when necessary. The men on the floor carry charge pads, form 3, and make careful records of all gasoline, oil, etc., used. These are placed on a spindle on the bookkeeper's table. The charge slips for transient washing, storage, charging electrics, etc., are made by the bookkeeper from the In and Out book. Charge slips for the repair jobs are made from the repair tickets, to be described later. All posting in the ledger is done direct from the charge slips.

Provisions for Inspection.

Every gasoline car has a regular night upon which it is inspected, and this is done before it is ing the garage. Upon arriving at the house he again examines the car, locks it, puts down floor rugs, closes all doors and windows and returns the key to the proper hook on the office key rack. On wet or stormy days side curtains and tire chains are put on without being ordered.

When gasoline cars are inspected, all grease cups are filled, the entire machine is oiled and all moving parts are examined for wear. Wheels are pulled and greased, crankcases drained, steering gear, transmission and differential are cleaned and refilled every 3000 miles. A report, form 23, is filled out at each inspection, a copy of which is sent to the owner when requested.

All tire changes, adjustment and necessary repairs are made at once without securing the authority of the owner. When a car comes in needing repairs which will hold it the next day, it is not left on the floor, but is driven directly



Form 11, Tire Record Book, White, 9⅝x3¾ Inches; 12, Time and Material Card, Yellow, 7¾x5; 13, a Reverse and b Obverse of Voucher, White, 8⅝x7; 14, Employee's Record, White, 5x3; 15, Material Tag, Manila, 4¼x7; 16, Receipts Distribution Slip, White, 3¼x5; 17, Employee's Record, Yellow, 7¾x5.

cleaned. On other nights, immediately after the tires have been inflated, the floor, robes and rugs are cleaned and folded, and the inside of the machine is thoroughly cleaned, compressed air being used on the upholstery. It is then ready for the wash rack, after leaving which it is thoroughly inspected and if not absolutely clean it is sent back. It is then parked in its proper place, and the trimmings are polished and the windows cleaned. Electrics go to the wash rack before being charged.

When cars have been ordered the day before, or have a standing order for delivery at a certain time, they are handled through the In and Out book in the same manner as a car coming in. Except in emergency cases, all calls for delivery must be in at least 30 minutes before the machine is wanted. The man making the delivery examines the lights, tires, etc., before leaving to the repair shop. A record of all tires put on is kept in a book ruled as shown by form 11.

Battery Care and Charging.

A regular half-day each week is assigned to every electric for inspection and battery care. For this report form 18 is used. Battery care is deemed absolutely essential, in order that the car may be kept in perfect condition, and for this reason, when an electric is called during its regular inspection period, the work is done the next time it is in, and a charge of $2 is made. The batteries are flushed the night before the regular inspection day.

The charging is done by means of a Cutler-Hammer, 125-volt, 50-ampere rheostat, with centralized control at the switchboards. The boards will handle six cars at a time. Alternating current is used to drive a 25 horsepower 60-cycle motor. The direct current is obtained through a

Digitized by Google

17.5 kilowatt generator. A 60-cycle, 125-volt mercury arc rectifier is used for boosting and on unusually busy nights.

The charging records are kept on the cards shown by form 10. These are filled out with the date, owner's name, car name, number, etc., as soon as the machine is marked in on the In and Out book, and placed on the night electrician's table. At the end of each month a summary of the work on each electric is compiled as shown by form 22.

Repair Jobs and Records.

When any car, regular or transient, comes in for repairs, it is entered in the In and Out book and sent to the repair shop with forms 9 and 15 attached. Form 9 shows what repairs are to be made, and form 15 the labor and material charged against the job. When the job is completed, charge slips are made from form 15 by the bookkeeper.

All tubes, casings, storage batteries and small parts in for repairs are tagged with form 6. A record of these tags is kept in a bound book, and is checked off as the work is completed. Charge slips are made from the tags when turned into the office.

All posting is done direct from the charge slips into a loose leaf ledger, which is duplicating, as shown by form 2. A new sheet is used each month. The bill is made by totalling the white sheet, which is torn off and sent to the customer. The yellow sheet, copy, is held in the ledger until paid, when it is transferred to a filing ledger. One sheet of form 1 is assigned to each customer and faces form 2. It is used to show a total of monthly debits and credits, and being in tumbler form is good for about a year.

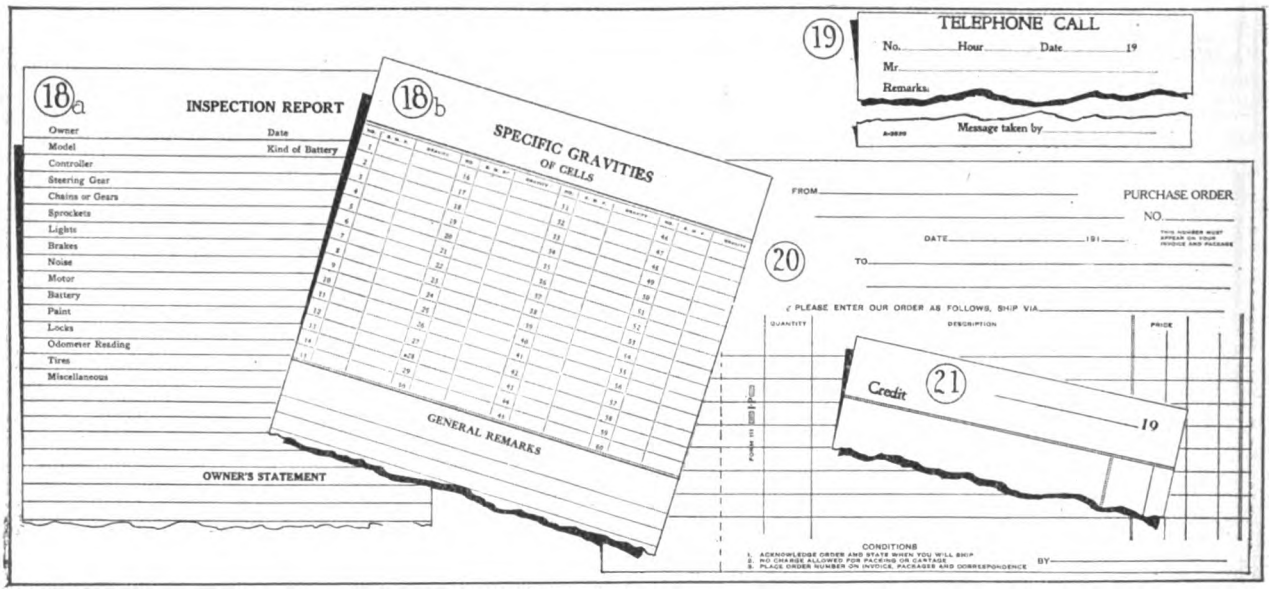
Cash Receipts and Distribution.

When cash or checks are received in payment for ledger accounts, a credit slip, form 21, is filled out and placed on the spindle for posting. The amount received is also shown on the cash sheet, form 5, as well as all monies received for the sale of sundries, gasoline, etc. All bills and salaries are paid by check and voucher, form 13, where possible. All checks are signed and countersigned. Attached to the voucher, when filed, are all invoices and other papers pertaining directly to the bill. All bank deposits are shown on the cash sheet. When a bill is paid from the cash drawer it is noted on the cash sheet, and form 7 is filled out and placed on the spindle.

Vouchers are posted in the distribution ledger, which is ruled to correspond with the back of the voucher. At the end of each month the disbursements, as shown on the cash sheet, less the bank deposits, are vouchered to the manager, as an expense account, and indorsed back to the drawer. In this way an accurate distribution of all disbursements is shown.

All monies received are distributed on form 16, and posted in a ledger to correspond. At the end of each month a summary is gotten out, showing the totals of the disbursements and receipts distribution.

When a chauffeur orders repairs or supplies on charge account, form 4 is used, the purchaser taking the white sheet and signing the yellow duplicate. The order number is then shown on the charge slip and on the bill.



Form 18, a Obverse and b Reverse of Electric Car Inspection Blank, White, 6x9 Inches; 19, Telephone Call Slip, White, 5x3⅛; 20, Purchase Order Blank, White, Duplicate Yellow, 9½x6; 21, Credit Slip, White, 5x3⅛.

Charge, credit and cash paid out slips are filed in three by five-inch vertical files, separated into the principal accounts by the usual guides arranged alphabetically. These files are cleared of the dead wood about once in 90 days, this being bundled, carefully marked and filed in the storeroom. Charging cards, repair tags, etc., are kept in five by eight-inch vertical files. Vouchers are filed in vertical document files and are kept alive for one year.

Form 8 is a record card for cars of regular boarders, cars that come in weekly for inspection and those that are in regularly for repair work. These cards are kept in a five by eight-inch vertical filing cabinet, and are found to be of a great deal of value, especially in cases of outside trouble work. Any customer in trouble on the road calls the garage immediately, stating the

Two Pages of In and Out Book, 18½x16½ Inches Each, Which Face Each Other and Care for Movement of Cars.

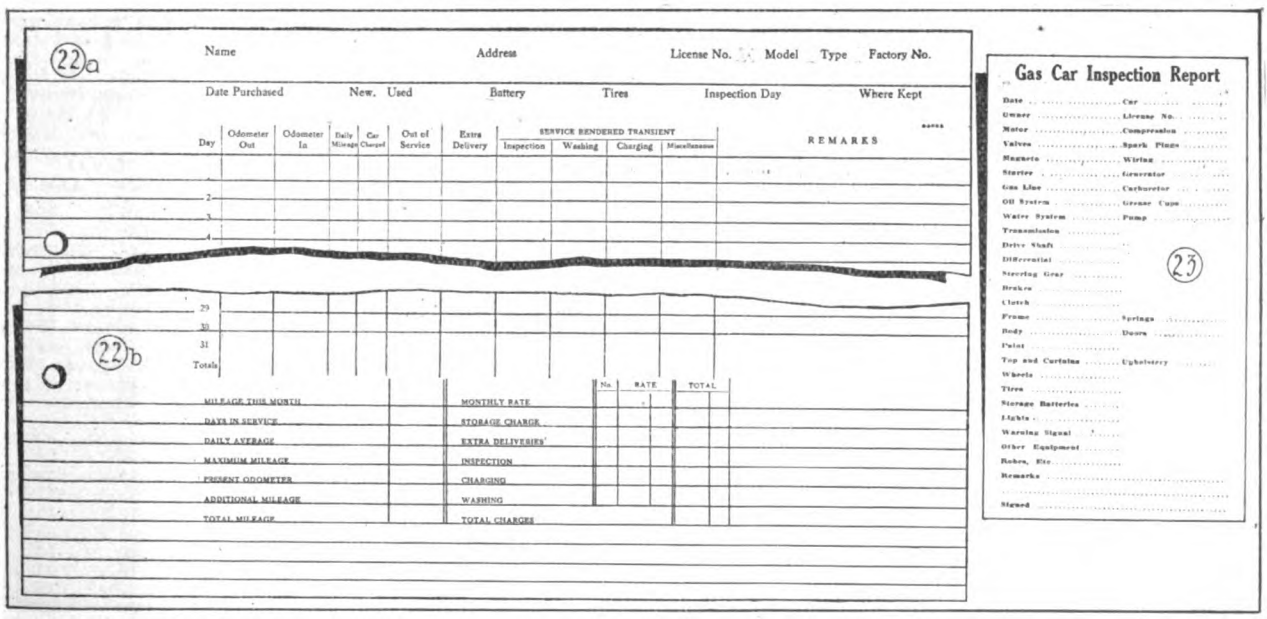
nature of the trouble, and small roadsters are maintained, equipped with tools, air bottles, etc., to handle this work. If the call comes from a point far away, to be reached quickly, the order is transferred to the nearest garage with instructions to handle the work and charge back to this station. A working arrangement is in effect with a large number of the better garages, covering this service, although they may not be controlled by this company. Form 8 also is of great assistance in ordering broken parts by telephone or letter from the factories and service stations, and often saves hours of delay to the owner.

Method of Making Collections.

All accounts receivable are due on the 10th of the month following that in which service or material is delivered. When not received on the 12th, a letter is sent calling attention to the fact and requesting a remittance. If still delinquent on the 20th the party is called on the telephone. Bills unpaid on the 25th, for which no arrangements have been made to be carried, are drawn on by three days' sight draft. If the draft is dishonored the account is sent to an attorney for collection and further credit is refused.

A careful record of the costs of washing and polishing, storage, charging electrics, heating, lighting and other items of expense is kept. Study of the forms and records shown will give the data for calculating the greater portion of these. In addition, record is made of the time lights are turned on and off, the time the generators are started and stopped, etc. The electric meters are read and recorded at noon each day, and a record is made in the In and Out book of the number of cars washed and polished. Time clock records are kept of all repair work, washing, livery, etc., in order to figure costs. A three by five-inch card file, alphabetically arranged, shows the cost or selling price, discounts and net cost of all material purchased.

The accompanying forms are explained in more detail by the captions. Those not already described herein explain themselves, in the main.



Form 22, a and b, Two Sections of Monthly Summary of Work on Electric Cars, White, 12x12½ Inches; 23, Gasoline Car Inspection Report, White, 8½x11.

TRADE INFORMATION EXCHANGE.

The Following Requests for Information, Presented by Members of the Trade Information Exchange, Offer Opportunities for Agents to Secure New Lines, for Manufacturers to Extend Their Representation and for Producers to Get in Touch with Those Who Are in the Market for Equipment and Supplies. They Are Published Without Name or Address, Those Interested Desiring the Negotiations to Be Strictly Confidential. Replies Should Be Addressed by the Number Given and Sent to the Exchange with Postage for Forwarding.

Through the Trade Information Exchange, The Accessory and Garage Journal is in a position to supply at request a number of the best pleasure car and power wagon agency propositions that can be secured. These agency openings are for machines of all kinds, makes and prices. When writing, state preference, prices and full details concerning that which is desired. All correspondence will be treated as confidential. No charge will be made for the service rendered.

GASOLINE PLEASURE CAR AGENCIES.

10,080—Michigan Dealer is in the market to represent a line of pleasure cars selling from $1175 up.

10,083—Iowa Firm is anxious to secure the agency for pleasure cars selling from $395 to $2175.

10,086—Texas House wants the agency for pleasure cars selling from $550 to $1975.

10,089—Pennsylvania Company is anxious to secure a line of pleasure cars selling from $520 to $2275.

10,091—Kentucky Concern is in the market to represent a line of pleasure cars selling from $500 up.

10,094—Alabama Dealer would like to represent a line of cars selling from $500 to $700.

10,097—Arkansas Firm is in the market to represent cars selling from $550 to $900.

10,099—Minnesota House wants to secure the agency for cars selling from $300 to $1600.

10,102—Iowa House is in the market to represent a line of cars selling from $400 to $700.

10,104—Kansas Dealer would consider an agency proposition for machines selling from $600 to $1000.

10,105—Idaho Company wants to secure the agency for pleasure cars selling from $500 to $1500.

10,108—Nebraska Dealer is in the market to represent a line of cars selling from $600 to $1500.

10,110—Pennsylvania Dealer is in the market to represent a line of cars selling from $490 up.

10,116—New York House wants to represent a line of cars selling from $550 to $1800.

10,117—New Jersey Dealer is anxious to secure a line of pleasure cars ranging in price from $300 to $900.

COMMERCIAL CAR AGENCIES.

6100—Pennsylvania House wants to represent a line of gasoline commercial vehicles ranging in price from $1110 to $2150.

6104—Michigan Concern is in the market to represent a gasoline commercial car selling from $750 to $1650.

6107—Iowa Dealer would consider an agency proposition for gasoline commercial cars ranging in price from $450 to $3500.

6110—Texas Dealer wants the agency for gasoline trucks selling from $500 up.

6113—Idaho Company would like to represent a line of gasoline commercial cars selling from $1000 to $1500.

6117—Pennsylvania Firm wants the agency for gasoline commercial cars selling at all prices.

6120—Canadian House wants to hear from a line of gasoline commercial cars selling from $750 to $1000.

CYCLECAR AGENCIES.

1759—Minnesota Firm is seeking information relative to cyclecars selling from $275 to $500.

1762—Kentucky House is interested in cyclecars and would take agency for a line selling from $300 to $500.

1768—Illinois Dealer is in the market to represent a first class line of cyclecars selling up to $500.

1769—Arkansas Concern would represent a standard line of cyclecars ranging in price from $350 to $600.

1773—Kansas Dealer wants to represent a line of cyclecars selling from $300 to $500.

1775—Oklahoma Dealer is in the market to represent a line of cyclecars selling from $375 to $400.

1777—California Concern wants the agency for cyclecars selling from $350 up.

MOTORCYCLE AGENCIES.

100—Arkansas Dealer would represent a line of motorcycles selling from $150 to $250.

105—Alabama House is anxious to secure the agency for motorcycles selling from $100 to $150.

110—Michigan Concern is in the market to represent a good line of motorcycles selling from $225 to $325.

ACCESSORIES, EQUIPMENT AND SUPPLIES.

328—Ohio Concern is interested in the following: Air compressors, air pumps, bodies, charging apparatus, cloth, clutches, cranes, dimmers, doors, drills, dynamometers, fenders, jacks, lamps, motors, plugs, polishes, radiators, reflectors, seats, shock absorbers, starters, tanks, transmissions, vises, whistles and windshields.

338—California Dealer is seeking information regarding autogenous welding equipment, carburetors, dimmers, dynamometers, generators, headlights, horns, hydrometers, lamps, lathes, magnetos, mechanical starters, rheostats and transmissions.

342—Kentucky Dealer wants carbon removers, strainers and whistles.

345—Illinois Firm wants asbestos, batteries, boilers, brushes, bulbs, bumpers, cabinets, cable, cans, chains, charging apparatus, cutters, cylinder machines, fire extinguishers, gaskets, graphite, guns, jacks, lamps, lathes, machinery, maps, meters (measuring instruments), nuts, paints, pins, rectifiers, tools, vulcanizers and waste; the above products to be used for resale and garage purposes.

347—Arkansas Dealer is in the market for air compressors, air pumps, anvils, asbestos, autogenous welding equipment, banding, batteries, belts, bolts, bulbs, bumpers, burners, caps, carbide, carburetors, cases, castings, celluloid, cements, chains, charging apparatus, chemical tanks, clips, cloth, coils, commutators, connectors, curtains, cutters, drills, drums, fire extinguishers, gasoline, gear cutting machines, generators, glass, goggles, graphite, grinders, guards, guns, hammers, headlights, horns, hose, indicators, injectors, lamps, lathes, leather, locks, lubricators, magnetos, mechanical starters, mufflers, nuts, packing, paints, patches, platinum, polishes, pumps, ratchet drills, reamers, reflectors, carbon removers, rubber, screws, soaps, storage systems, strainers, switchboards, switches, tanks, taps, terminals, testers, timers, tire accessories, tires, tools, tubing, upholstery, varnishes, vises, voltmeters, vulcanizers, washers, washstands, whistles, windshields, wire and wrenches.

348—Minnesota Concern wants carbide, guns, mechanical starters, plugs, shock absorbers, speedometers, vulcanizers and whistles, also oils and greases. Products to be used for model T Ford cars.

351—Iowa Firm is in the market for lathes.

353—Minnesota Dealer is interested in the following: Emblems, fire extinguishers, horns, plugs, tire accessories, tires, tools and vulcanizers. The above goods are to be used for retail and a garage.

356—Iowa House is in the market for the following: Air compressors, air pumps, anti-rattlers, arbor presses, batteries, belts, bolts, bulbs, bumpers, burners, cable, cans, caps, carburetors, chains, clips, coils, commutators, connectors, cups, cutters, cylinders, drills, dynamos, emblems, engines, forgings, gaskets, grinders, headlights, horns, hose, hydrometers, ignition, indicators, jacks, magnetos, packing, patches, pistons, platinum, plugs, polishes, primers, pullers, punches, reamers, shims, soaps, speedometers, springs, testers, tire accessories, tires, tools, trunks, valves, voltmeters, vulcanizers, waste, wearing apparel, whistles, windshields and wrenches; the above products to be used in a repair shop and supply stock.

358—Kansas Company wants air compressors, air pumps, autogenous welding equipment, batteries, bulbs, carburetors, chains, charging apparatus, coils, connectors, dimmers, fire extinguishers, gaskets, generators, headlights, horns, ignition equipment, lamps, magnetos, maps, mechanical starters, polishes, ratchet drills, reflectors, searchlights, separators, shock absorbers, soaps, sockets, speedometers, tape, tire accessories, voltmeters and wire. The products to be used in a wholesale and retail supply house.

361—Nebraska Concern is in the market for air compressors, anti-rattlers, arbor presses, batteries, bolts, bulbs, bumpers, burners, cable, carburetors, celluloid, cements, chemical tanks, coils, cranes, fire extinguishers, headlights, horns, indicators, jacks, lamps, magnetos, platinum, plugs, polishes, primers, radiators, reflectors, searchlights, shafting, shims, shock absorbers, soaps, solder, speedometers, springs, strainers, tape, terminals, testers, timers, tire accessories, tubing, valves, voltmeters, vulcanizers, waste, wearing apparel, whistles, windshields and wrenches. The above goods are to be used in a garage.

Digitized by Google

363—Pennsylvania Dealer wants a full line of parts suitable for Ford cars.

366—Minnesota Firm wants air pumps, anti-rattlers, batteries, bulbs, bumpers, dimmers, gaskets, graphite, headlights, horns, hose, jacks, molds and cores, mufflers, patches, pumps, rims, rubber, spokes, springs, steering wheels, tape, tire accessories and wheels.

367—California Dealer is interested in the following: Air pumps, anti-rattlers, bulbs, bumpers, carbide, chains, chemical tanks, clamps, coils, fire extinguishers, gaskets, gasoline, goggles, headlights, horns, lubricators, mufflers, patches, polishes, reflectors, carbon removers, shock absorbers, tires, tools, trunks, tubing and vulcanizers.

369—Minnesota Firm wants axles, bodies, carburetors, coils, forgings, magnetos, motors, timers, transmissions and valves. The products are to be used in rebuilding and remodelling old cars.

372—California Dealer wants air compressors, air pumps, anti-rattlers, asbestos, axles, batteries, bearings, bolts, brakes, bulbs, bumpers, burners, cable, carburetors, chains, clamps, cloth, clutches, coils, commutators, cones, cylinders, dimmers, doors, engines, fasteners, fire extinguishers, gaskets, gears, grinders, hoists, ignition equipment, lathes, levers, magnetos, mechanical starters, nuts, packing, pedals, pinions, pins, radiators, reamers, carbon removers, screws, shims, shock absorbers, solder, steel, steering wheels, storage systems, switches, tape, testers, timers, tire accessories, tires, tools, transmissions, tubing, valves, vises, vulcanizers, waste, windshields, wire and wrenches.

375—Massachusetts House wants metal parts, pulleys, stampings, steel and tubing.

377—Virginia Firm wants the following: Coils, discs, headlights, horns, lamps, lubricators, mufflers, paints, stampings, steering wheels, steps, tops and parts, trimmings, tubing, upholstery, varnishes, wheels, windshields and wrenches.

380—Indiana House wants bodies, fenders, mechanical starters, two-cylinder opposed air-cooled motors, V belt pulleys and transmissions; also control levers for gearshift to use on cyclecars. The above goods are to be used for cyclecars.

384—Ohio House wants hub caps and gasoline gauges.

388—Oklahoma Dealer is in the market for batteries, chains, gauges, testers, tire accessories and tires.

391—New York House is interested in air pumps, batteries, bumpers, carbide, chains, chemical tanks, coils, dashes, emblems, gaskets, graphite, headlights, hose, lamps, magnetos, meters (measuring instruments), pistons, racks, searchlights, shock absorbers, timers, tires, tools, trunks, voltmeters, vulcanizers and waste. The above goods are to be sold at wholesale and retail.

392—Iowa Firm is in the market for air compressors, air pumps, arbor presses, batteries, bulbs, cabinets, cable, carburetors, celluloid, chains, coils, commutators, cones, cranes, cups, drills, fire extinguishers, gaskets, graphite, grinders, guns, hoists, horns, hose, ignition, jacks, lathes, magnetos, molds and cores, packing, patches, pedals, pins, plugs, polishes, pullers, pumps, ratchet drills, reamers, rubber, scrapers, searchlights, shafting, shims, shock absorbers, speedometers, springs, steel, switches, tanks, tape, terminals, testers, timers, tire accessories, tires, tools, trunks, tubing, turntables, valves, vises, vulcanizers, washers, waste, wearing apparel, windshields, wire and wrenches.

395—Maine House wants arbor presses, autogenous welding equipment, axles, belts, brakes, brushes, carburetors, clips, cloth, drills, fasteners, fire extinguishers, forgings, frames, gaskets, gears, hammers, headlights, hoists, horns, ignition, jacks, lamps, lathes, leather, locks, lubricators, machinery, magnetos, packing, paints, patches, pins, plugs, presses, reamers, carbon removers, rims, screws, shims, shock absorbers, soaps, spokes, springs, switches, tape, terminals, testers, timers, tire accessories, tires, tops and parts, upholstery, varnishes, waste, windshields and wrenches.

399—Montana Dealer is interested in the following: Air compressors, batteries, bulbs, bumpers, carburetors, clips, doors, dynamos, engines, generators, glass, guns, heaters, hoists, hose, jigs, mechanical starters, odometers, radiators, reamers, screws, separators, solder, starters, tire accessories, wearing apparel, whistles and windshields.

402—New Jersey Concern wants arbor presses, asbestos, autogenous welding equipment, batteries, bearings, belts, bolts, bulbs, burners, cable, carburetors, castings, cements, chains, charging apparatus, coils, connectors, couplings, cutters, cylinder machines, drills, forgings, furnaces, gaskets, gasoline gauges, gears, goggles, grinders, guns, hose, hydrometers, ignition, jacks, lathes, magnetos, maps, nuts, packing, patches, pinions, pins, pistons, platinum, plugs, polishes, presses, pullers, pulleys, pumps, punches, ratchet drills, reamers, rectifiers, rods, screws, shafting, soaps, solder, steel, switches, tanks, tape, testers, timers, tires, tools, tubing, valves, vises, vulcanizers, waste and wrenches.

404—New York Firm wants the following: Air compressors, air pumps, anti-rattlers, anvils, arbor presses, asbestos, autogenous welding equipment, axles, banding, batteries, bearings, belts, bodies, boilers, bolts, brakes, brushes, bulbs, bumpers, burners, cabinets, cable, camshafts, cans, caps, carbide, carburetors, cases, castings, celluloid, cements, chains, charging apparatus, chemical tanks, clamps, clips, cloth, clutches, coils, collars, commutators, cones, connectors, controllers, couplings, cranes, cups, curtains, cutters, cushions, cylinder machines, cylinders, dashes, dimmers, discs, doors, drills, drums, dynamometers, dynamos, elevators, emblems, engines, fans, fasteners, fenders, fire extinguishers, forgings, frames, furnaces, gaskets, gasoline gauges, gear cutting machines, gears, generators, glass, goggles, graphite, grinders, guards, guns, hammers, headlights, heaters, hoists, holders, horns, hose, hubs, hydrometers, ignition, indicators, injectors, jacks, jigs, joints, knuckles, lamps, lathes, leather, levers, locks, lubricators, machinery, magnetos, maps, mechanical starters, metal parts, meters, measuring instruments, molds and cores, motor controllers, motors, mufflers, nuts, odometers, packing, paints, pans, patches, pedals, pinions, pins, pistons, platinum, plugs, polishes, presses, primers, pullers, pulleys, pumps, punches, purifiers, races, racks, radiators, ratchet drills, reamers, rectifiers, reflectors, regulators, carbon removers, rests, rheostats, rims, rods, rubber, scrapers, screws, searchlights, seats, separators, shafting, shapers, shims, shock absorbers, soaps, sockets, solder, speedometers, spokes, springs, stampings, steel, steering wheels, steps, storage systems, strainers, switchboards, switches, tanks, tape, terminals, testers, timers, tire accessories, tires, tools, tops and parts, transmissions, trimmings, trunks, tubing, turntables, upholstery, valves, vaporizers, varnishes, ventilators, vises, voltmeters, vulcanizers, washers, waste, wearing apparel, wheels, whistles, windshields, wire and wrenches.

CRUDE OIL PRICES.

Crude oil prices at the wells have endured a series of reductions during the past month. Kansas and Oklahoma began the downward movement during the middle of April, and most of the others have followed, the exceptions being the California crudes, Caddo, La., 38°, and Spindletop. Pennsylvania crude has dropped from $2.50 to $1.90 and most of the others in proportion. The prices of crude petroleum at the wells during the middle of May were as follows:

Pennsylvania dark	$1.90	Ragland	$ .65
Second sand	1.90	Illinois above 30°	1.15
Tiona	1.90	Illinois below 30°	1.40
Mercer black	1.40	Kan. & Okla.	.75
Cabell	1.47	Corsicana light	.75
New Castle	1.40	Corsicana heavy	.50
Corning	1.05	Electra	.75
Wooster	1.46	Henrietta	.75
North Lima	1.19	Caddo, La., 38°	1.05
South Lima	1.14	Caddo, La., heavy	.50
Indiana	1.14	Spindletop	1.06
Princeton	1.15	Canadian oil	1.69
Somerset 32°	1.05

PERSONAL NEWS OF THE INDUSTRY.

Hoover Holton has been appointed Canadian sales manager of the Empire Automobile Company, Indianapolis. His headquarters will be at London, Ont.

J. V. Harding, special representative of the Motz Tire & Rubber Company, Akron, O., paid a special visit during the month of April to Motz representatives west of the Mississippi.

Hoover Holton, Canadian Sales Manager, Empire Automobile Company.

L. J. Ollier has been appointed sales manager of the Studebaker Corporation, Detroit, and R. T. Hodgkins as assistant sales manager.

T. H. McGlehan, vice president and general manager of the Motz Tire & Rubber Company, Akron, O., spent three days in Chicago during April, inspecting the new quarters of the company's Chicago branch at 115 East 30th street.

H. W. McClellan, who has been Troy district manager for the E. V. Stratton Company, Albany, N. Y., has been promoted to sales manager of the company, with headquarters at Albany, and will have direct charge of the retail sales of the company, including its branches.

Charles S. Monson, who recently opened offices in the Dime Bank building, Detroit, has become factory representative of the Motometer Company, New York City. This company makes the Boyce motometer radiator heat indicator.

Philip Hawley, Boston, formerly manager of the New England branch of the Studebaker Corporation, has been appointed manager of the Boston branch of the King Motor Car Company.

Frank J. Mooney, for several years advertising manager of the Hupp Motor Car Company, Detroit, has been appointed to handle the sales as well as the advertising in the present spring and summer campaign of that company.

W. S. Mead, second vice president of the Chandler Motor Car Company, Cleveland, whose duties, since the organization of that company last year, have taken him to all the large cities of the United States and Canada for the appointment of Chandler dealers, has opened permanent offices with the Bray-Murray Motors Corporation, the concern's New York representative, at 245 West 55th street, where he will supervise the distribution of cars to the eastern dealers.

F. F. Phillips, well known in the solid tire trade, with which he has long been identified, has been appointed New York City manager of the Gibney Tire & Rubber Company, Philadelphia, Penn. The company makes the Gibney wireless solid tires. John L. Gibney, who has been directing the branch, will give his time to the larger trade, travelling among the other branch houses.

J. D. Hopper, formerly with the Hamilton Scale Company, Hamilton, O., has become affiliated with the service department of the Remy Electric Company, Anderson, Ind., J. L. Elwood having resigned to take a position with the Eureka Manufacturing Company of Northeast, Penn., as general superintendent.

Charles W. Churchill has been appointed manager of the Winton Motor Car Company, Cleveland, O. This is a newly created office. Mr. Churchill has been with the Winton company for the past 10 years.

George C. Hubbs has been appointed assistant general sales manager in charge of promotion and advertising for the Dodge Bros. Company, Detroit.

Howard Fenton has become associated with the Nordyke & Marmon Company, Indianapolis, in the capacity of advertising manager. Mr. Fenton was formerly connected with the Remy Electric Company, Anderson, Ind.

J. H. Kreidler, Detroit, has been appointed superintendent of the Standard Motor Truck Company of that city. He was formerly connected with the General Motors Truck Company and the Northway Motor Company.

H. E. Raymond, second vice president and sales manager of the B. F. Goodrich Company, Akron, O., is to make his headquarters in New York City so as to be in touch with B. G. Works, president of the company, who also has an office in the Metropolis. A. H. Marks, vice president and manufacturing manager, will have charge of affairs at Akron.

J. H. Quinlan has assumed charge of the retail sales of Chandler cars in Chicago and vicinity. Mr. Quinlan was formerly vice president of the Centaur Motor Company, Chicago, distributor for Jeffery cars.

Q. G. Noblitt, factory manager of the Marvel Carburetor Company, Flint, Mich., for the last two years, has assumed similar duties with the Haywood Tire & Equipment Company, Indianapolis.

George E. Daniels, vice president and general manager of the Oakland Motor Car Company, Pontiac, Mich., for the past four years, has resigned.

J. H. Manion, Indianapolis, has been appointed sales manager of the Comet Cyclecar Company of that city. He was formerly connected with the R-C-H Corporation and the Brown Commercial Car Company.

I. M. Meers, foreign sales manager of the Empire Motor Car Company, Indianapolis, has become assistant sales manager of the King Motor Car Company, Detroit.

J. W. Johnston, Chicago, Ill., has joined the sales force of the Connecticut Telephone & Electric Company, Meriden, Conn., manufacturer of the well known Connecticut ignition products.

J. H. Newmark, advertising manager of the Oakland Motor Car Company, Pontiac, Mich., has resigned. In severing his affiliation with Oakland company, Mr. Newmark breaks a connection of five and one-half years, which is held to constitute a record for continuous service in the advertising field.

Duncan McRae is now connected with C. E. Taylor as sales manager of the A Street Garage, Inc., Tacoma, Wash.

F. E. Devlin is sales manager of the Colonial Motor Company, Baltimore, Md. He was formerly manager of the branch of the Thomas B. Jeffery Company at Philadelphia.

Harold Smith has resigned as secretary and purchasing agent of the Racine Manufacturing Company, Racine, Wis., and will become vice president of the B. G. & M. Manufacturing Company, Chicago.

Thomas A. Bastable, formerly manager of the service department of the Motz Tire & Rubber Company, Akron, O., has joined the sales force of the company's Chicago branch.

Albert R. Miller has become associated with the Troy Wagon Works, Troy, O., and will have charge of the sales of the Troy reversible tracking motor truck trailers in the United States.

R. S. De Mitkiewicz has been appointed sales manager of the Hurlburt Motor Truck Company, New York City. He was formerly connected with the American Locomotive Company until it discontinued the manufacture of automobiles.

James W. Gilson has again become identified with a project of which his old chief, Capt. William Mitchell Lewis, is president. He is now advertising manager of the L. P. C. Motor Company, Racine, Wis., manufacturer of the Lewis Six.

A. H. Dorsey has become associated with the Anderson Electric Car Company, Detroit. He is manager of sales and succeeds W. J. Gordon.

F. L. Lamson, formerly assistant to the works manager of the B. F. Goodrich Company, Akron, O., is one of the directors of the recently formed Norwalk Tire & Rubber Company, Norwalk, Conn. He is also secretary and treasurer.

A. C. Cook has been assigned the duties of sales manager of the Warner & Swasey Company, with which concern he has been associated for the past two years, and will make his headquarters in Cleveland, O.

William T. Helfer has accepted a position as sales manager of the Jeffery-Dewitt Company, Detroit, well known manufacturer of spark plugs and spark plug porcelains.

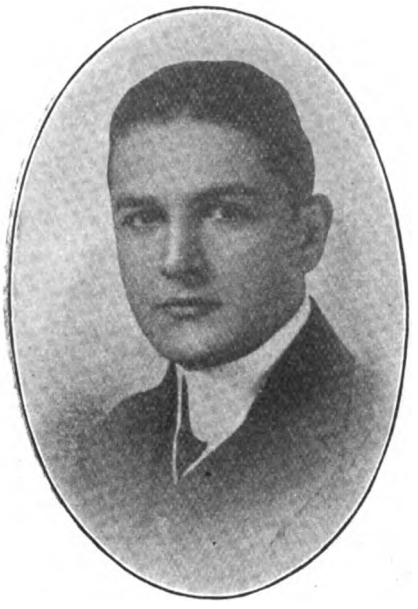
William T. Helfer, Sales Manager, Jeffery-Dewitt Company.

Arthur I. Philp, Detroit, is to be the sales manager of the automobile division of Dodge Bros. Company of that city. He will assume his new duties some time this

Digitized by Google

month. He was formerly connected with the Studebaker Corporation and the United States Tire & Rubber Company.

C. B. Harris is to succeed C. H. King as general sales manager of the Keats Automobile Company, Portland, Ore. He is well known to the trade.



Joseph N. Kraus, Advertising Manager, Partin Manufacturing Company.

Joseph N. Kraus, formerly of New York City, has been appointed advertising manager of the Partin Manufacturing Company, Chicago, Ill.

A. S. Noble, who has been vice president of the J-M Shock Absorber Company, Philadelphia, for the past two years, has resigned, owing to ill health. No plans for the future have yet been made.

C. Roy Clough has accepted a position as manager of the Brasher Motor Car Company, Columbus, O. He was formerly connected with the Chalmers company.

A. L. Reuter has become associated with the Badger Tire Repair Company, Milwaukee, Wis., in the capacity of general manager. He was formerly tire expert for the Milwaukee branch of the Thomas B. Jeffery Company.

Joseph Hoeller has resigned as superintendent of the gasoline engine department of the Gilson Manufacturing Company, Port Washington, Wis., to accept a like position with the Brillion Iron Works, Brillion, Wis.

G. H. Duck has resigned as New York City truck sales manager for the Locomobile Company of America. He is to be succeeded by F. H. Colver, who held a similar position at the Philadelphia branch.

O. Hart has purchased an interest in the business of the Sears Automobile Company, Detroit. He was connected with the Thomas B. Jeffery Company, Kenosha, Wis., for six years, lately being in charge of the company's truck department.

Joseph Schwartz has been elected president of the All-South Transcontinental Highway Association. He is Louisiana distributor of the Buick car.

Samuel Rolf has accepted a position as general manager of the sales division of the Signal Motor Truck Company, Detroit. He was formerly district sales manager of the Federal Motor Truck Company.

J. C. Piper has resigned as president of the Piper Machine Company, Indianapolis.

James M. Dickens has resigned from the J. I. Case Threshing Machine Company, Racine, Wis., to become sales manager of the Advance Manufacturing Company of that city.

C. M. Tucker, motor vehicle policeman of Wichita, Kan., holds the honor of being the first police officer in the United States to use a cyclecar in the performance of his duty.

M. L. Williams, who has been president and general manager of the 20th Century Motor & Supply Company, South Bend, Ind., has resigned. He will handle the Cole cars exclusively in South Bend.

C. H. Duncan has become manager of the Cole Motor Company, Erie, Penn.

W. J. Gordon has been appointed general manager of the reorganized Century Electric Car Company, Detroit. Mr. Gordon is well known in Detroit and will make his office at the company's sales and service station, 1000 Woodward avenue.

L. J. Schott has resigned as manager of the service department of the Swinehart Tire & Rubber Company, Akron, O. He is to take up a similar position with the Marathon Tire & Rubber Company of that city.

Ted Drews has been appointed purchasing agent and service manager of the newly organized R-C-H Corporation in Detroit. He was formerly service manager of the Hupp Motor Car Company.

M. E. McKenney has become assistant sales manager of the Federal Motor Truck Company, Detroit, having severed his connection with the Geuder, Paeschke & Frey Company, Milwaukee, Wis. He was the latter concern's advertising manager.

A. G. Rumof has been appointed secretary of the Studebaker Corporation, Detroit. He was formerly in charge of the credit department of the Studebaker Corporation's office in Detroit. As secretary he succeeds Scott Brown, who resigned.

Frederick Robinson has resigned as vice president of the J. I. Case Threshing Machine Company, Racine, Wis. F. Lee Norton, general manager, becomes vice president.

S. W. Rushmore of the Rushmore Dynamo Works, Plainfield, N. J., has just returned from an extensive trip on the Continent, and reports that the Rushmore starting and lighting system has been adopted by five of the leading firms in Italy, six in France, and by several in Austria and England. One of the latest of the French firms to adopt the Rushmore dynamo and starter as standard equipment is the De Dion-Bouton Company.

C. C. Starkweather was elected president of the Detroit Automobile Dealers' Association at the annual meeting held recently. He has been treasurer for two years and a director for a longer period, and has taken an active part in staging the city's motor car shows.

C. A. Jay has accepted a position with the Horton Motor Company, with headquarters at Fargo, S. D.

W. H. Riblet, of the sales force of the Service Motor Truck Company, Wabash, Ind., is in the East placing agencies for the Service line of trucks.

Peter Doyle, who was the travelling representative of the Timken-Detroit Axle Company, died in Chicago recently. He was at one time sales manager of the Long Manufacturing Company of Detroit.

Charles H. Cross has opened offices in the Ford building, Detroit, as branch manager for the Crocker-Wheeler Company, Ampere, N. J., manufacturer and electrical engineer.

Fred E. Tucker has been appointed manager of the New York branch of the Stromberg Motor Devices Company, Chicago. Mr. Tucker was recently a travelling representative of the Maxwell Motor Company, Detroit.

A. D. Trempe has been appointed sales manager of the Mott Wheel Works, Utica, N. Y.

W. Covert Jones has become the Chicago branch sales manager of the American Ever Ready Company, New York City, maker of electrical specialties and spring engine starters.

R. E. Olds, automobile manufacturer, has disposed of his entire stock in the State Journal of Lansing, Mich., the leading daily newspaper in that city.

Charles E. Stahl has been appointed sales manager of the Connecticut Telephone & Electric Company, Meriden, Conn., maker of the well known Connecticut ignition systems.

E. J. Lloyd, formerly of the American Ever Ready Company, Chicago, has accepted a position as advertising manager with the Catalogue Systems Company of that city.

W. C. Knight has been appointed western sales manager of the Boston Auto Garage Company, manufacturer of gasoline and oil gauges. The office of the company is at 1231 Woodward avenue, Detroit. Mr. Knight has been associated with the Stewart-Warner Instrument Company and the Stewart-Warner Corporation.

Harry Gleisman, who is well known in the motorcycle field through his long connection with that branch of the industry in the East, and as organizer and president of the New York City Motorcycle Dealers' Association, has joined the sales force of the Miami Cycle & Manufacturing Company, Middletown, O. He will travel in the eastern states in the interests of the Flying Merkel mount.

Harry Gleisman, Salesman for Miami Cycle and Manufacturing Company.

L. S. Weeks has joined the sales forces of the Pasadena Motor Car Company, Pasadena, Cal. Mr. Weeks is well known in the trade.

Frank Witt is now sales manager of the La Vigne Cyclecar Company, Detroit. He is a well known racing driver and lately was connected with the Studebaker Corporation and the Krit Motor Car Company.

F. C. Braden has accepted a position as special factory representative of the Swinehart Tire & Rubber Company, Akron, O., and will make his headquarters in Cleveland. He was formerly connected with the New York branch of the company as pneumatic tire salesman.

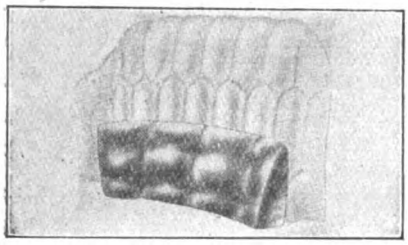
ACCESSORIES, SUPPLIES AND FITTINGS.

(When Writing, Please Mention The Accessory and Garage Journal.)

EASYBAK CUSHION.

Supports the Back, Contributing to Comfort When Driving.

The Holden Manufacturing Company, St. Paul, Minn., is marketing the Easybak cushion, which is con-



structed to support the back, thereby eliminating the strain upon the muscles when operating the clutch and brake pedals. The device is also of value to other occupants of the car. The Easybak fills the vacant space and, supporting as it does the entire back, permits one to sit with the muscles relaxed. It is made of a strong water proof fabric in a dark gray or subdued brown to match the slip covers, and in imitation or genuine leather. It is stated that the design will fit all makes of cars. The leather sells for $3.50, other cushions for $2.

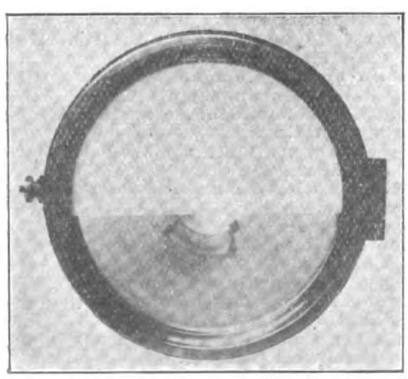
MULCHAHEY DIMMER.

Eliminates Blinding Effect of Headlights by Novel Means.

One of the latest devices for eliminating the glare of the headlights is the invention of Howard F. Mulchahey, 8 Mt. Vernon street, Providence, R. I., and it is stated that it is adaptable to both electric and acetylene lamps. The dimmer or headlight ray controller, as it is termed by the maker, is obtained by treating the glass of the headlight by a special process.

The glass is treated to a point a little below its centre and while the frosting effect eliminates the glare, it does not reduce the efficiency of the light, as the lower half is left untreated. Consequently the projecting rays are obtained, but the upward members are so softened that occupants of approaching vehicles, and pedestrians are not blinded.

The maker states that he has given his dimmer severe road tests and that one can look into the lamp without any blinding effect, as the bright rays do not reach above the waist of an average sized person. It is also claimed that a better driving light is obtained, as the upward rays are softened, and this should prove of value when operating in foggy

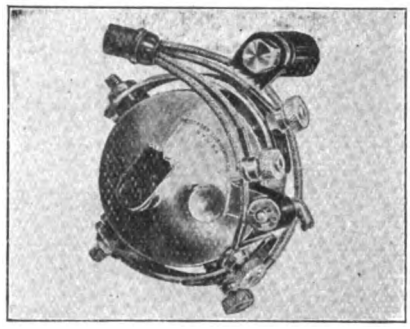


weather. One of the qualities of the process is that it is inexpensive, and that the regular glass can be treated or replaced by one of the Mulchahey design. Another feature is that after once fitting no attention is required, and the design is practical for city as well as country driving.

PEDERSEN TERMINALS.

Attachment for Ford Timer Having Accessible Features.

The Pedersen Lubricator Company, 640 First avenue, New York City, maker of lubricating devices, has brought out a new specialty for the model T Ford motor. It is a simple and inexpensive attachment for the commutator, consisting of two sheet metal stampings, which are utilized as false terminals. They are attached to the regular Ford timer



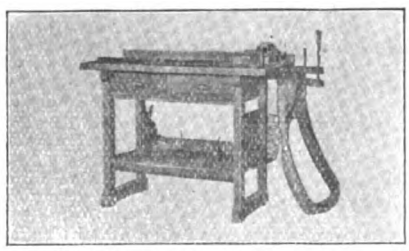
terminals, but are insulated from the two upper ones by fibre strips.

The function of the arrangement is to keep the two lower terminals and their primary wires away from the deteriorating effects of oil, etc., and the design makes it possible to reach the terminals easily when desired.

GRAND RAPIDS WORK BENCH.

Built for the Owner and Private Garage and Has a Vise.

The Grand Rapids Hand Screw Company, Grand Rapids, Mich., has brought out a work bench especially



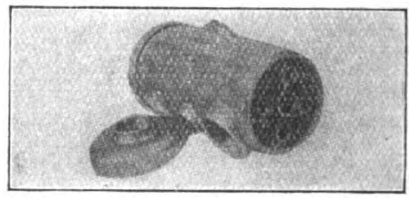
adapted to the private garage and for the owner who does his own repairing. It is well constructed of wood and has drawers partitioned off for the storing of nuts, bolts, screws and small material. The top is of hard wood and is protected by galvanized iron. A continuous screw iron vise is part of the equipment.

The bench is 48 inches long, 24 wide and 36 high. At one end is attached a wire basket to hold waste, rags, sponges, etc. There is also an extension for tire repairing, and the bottom of the bench is fitted with a back rail for storing oil cans, etc. The Grand Rapids bench sells for $15.

FARNSWORTH GENERATOR.

Makes Possible Use of Heavy Fuels and Distillates.

The Farnsworth gas generator, marketed by the Distillate Motor



Equipment Company, San Francisco, Cal., makes possible, it is claimed, the operation of a motor car with kerosene, distillate and other low grade fuels. The exhaust gas is utilized for raising the temperature of the fuel, and the generator shown in the accompanying illustration is attached to the carburetor in such manner that the exhaust taken from the exhaust manifold is passed around the chamber of the device. The generator itself is cylindrical in form.

It is stated that tests made with the device resulted in a great saving of gasoline, and that considerably more energy was developed by the motor. Similarly, it is claimed that the mileage a gallon was increased, it being 12.6 miles without the generator and 15.3 with the apparatus installed on a standard make of pleasure car.

APOLLO ELECTRIC HORN.

A Moderately Priced Signal Manufactured in Two Sizes.

The Automobile Supply Manufacturing Company, Brooklyn, N. Y., is marketing a new design of electric horn termed the Apollo. It is a moderately priced signal, but the maker states that the same material and workmanship are incorporated as in the other products of the company. The tone is claimed to be far reaching, but free from harshness. The warning note is held to be specially adapted for city work.

The operating mechanism is stated to be so constructed that it will require no attention, and the horn is accompanied by a three years' guarantee. It comes in two sizes, the model S having a five-inch bell and overall length of nine inches. Model L is 10 inches long and has a 7.25-inch bell. It comes complete with push button, cord, etc., and is held to be economical in current consumption. The model S retails for $5 and the model L for $6.

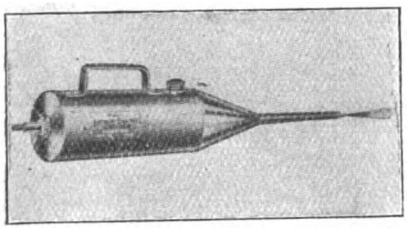
ROMORT ENGINE CLEANER.

Utilizes Kerosene in Form of Spray for Cleaning Motor, Etc.

The Romort Valve Company, 701 East Pike street, Seattle, Wash., is manufacturing the Romort engine



cleaner, which is designed especially for removing oil, grease and dirt from the motor and components of the chassis. The Romort is filled with two quarts of kerosene or gasoline, and air is supplied by a pump, compressor or tire power pump, a standard connection being provided. Turning a knurled rod opens a valve, permitting the fluid to be forced out in a very strong spray, which may be regulated as desired by the operator. The cleaner is equipped with a long spout, making it an easy task to reach parts not accessible by the usual cleaning methods. Being forced at a high pressure the spray removes deposits that would ordinarily require considerable labor to displace by the brush or rag treatment. It retails for $3.

PERKINS CAMPBELL LINE.

Includes a Number of Specialties for the Ford Car.

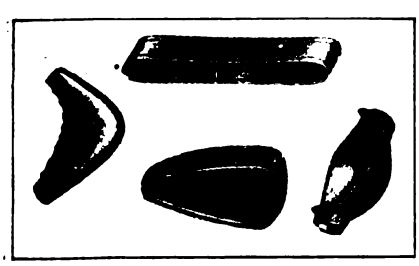
The Perkins Campbell Company, 626 Broadway, Cincinnati, O., is manufacturing a number of specialties for Ford cars, these including the Latigo fan belt, steering gear boots, top rest, rebound straps, front license holder, spark plug case, hood strap, license and tire straps, starting crank holder, etc.

The Latigo fan belt shown herewith, is constructed of genuine Latigo leather, which contains no mineral or material employed in tanning. It is claimed to be the strongest leather known, and that it is impervious to the action of heat, oils or water. Special emphasis is laid upon its non-stretching qualities. It is also held to be unusually flexible.

The boots marketed by the company for the steering linkage of the Ford machine come three to a set. They are constructed of the best grade water proof leather, and are of the lace type. By packing these boots with grease the parts are assured of proper lubrication, and the covers also exclude road dust, which is an abrasive. The entire set is inexpensive.

The Perkins Campbell Company is specializing on water proof seat covers and manufactures these for both the Ford touring and roadster models. The material employed is the best grade water proof cloth, which is cut over special patterns to insure an accurate fit. The maker states that the covers will not stretch or shrink. They are fitted by screw glove fasteners, and can be attached easily by the owner.

The company will forward its illustrated circulars upon request.

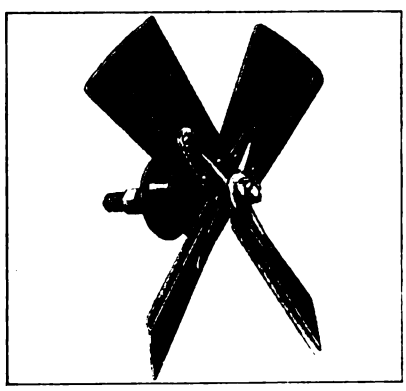


OAKES CYCLECAR FAN.

New Model Is Light in Weight and Blades Have a Peculiar Flare.

The Oakes Company, Indianapolis, Ind., manufacturer of automobile parts and a specialist in radiator fans, has brought out a new design especially adapted for service on cyclecars. As shown by the accompanying illustration, the blades are set at an angle or pitch that has been found to be the most effective under actual tests.

One of the features of the new fan is the use of a peculiar flare on the side of the blades, which is held to be a practise in vogue abroad. The new model, although of light weight, has been constructed with the same



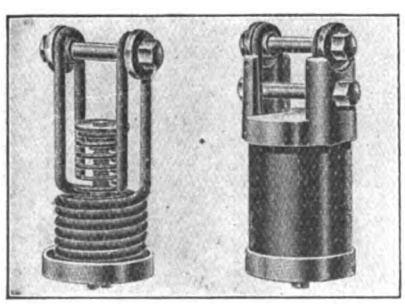
high grade material and workmanship for which the products of the company are noted.

JOHNSON SHOCK ABSORBER.

Principle Involves Use of Two Concentric Coiled Springs.

The Johnson shock absorber is manufactured by the Triple Action Spring Company, 55 East 28th street, Chicago, and is made in four different sizes, the smallest being suitable for Ford machines and the largest for five-ton commercial vehicles.

The principle involves the use of two concentric coiled springs, one



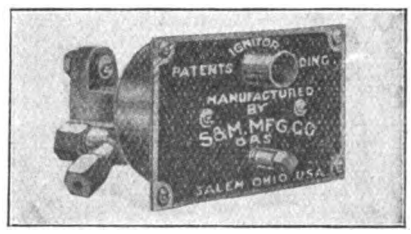
being utilized to compensate for the lighter shocks and the other to care for the heavier ones. The main spring is ample in diameter, and being of heavy stock has ample capacity for absorbing considerable shocks. The maker calls attention to his design, stating that it has an advantage over other types in this respect.

The main spring is a double coil, with the upper ends bent into the form of loops, providing a simple construction and one making for easy attachment of the shock absorber to the upper spring shackle bolt of the machine. A central adjusting bolt provides for adjustment of 1000 pounds.

S. & M. GAS LIGHTER.

Controls and Lights Acetylene Headlights from the Seat.

The S. & M. gas lighter appliance is marketed by the S. & M. Manufacturing Company, Salem, O., and is an



electrical device which enables the operator of a car to control his gas lights from the seat. The gas is turned on at the dash, a diaphragm regulator preventing it from being turned on too high by controlling the pressure from the tank. This insures the proper sized flame at all times.

Ignition of the gas is effected by an electrical circuit which starts at the rear spark plug and runs to one terminal of the controlling valve switch. From the other terminal a wire is led to the right hand burner, which is wired across to the other headlight and grounded. Special burners are necessary with the system and are included with each equipment. The outfit is moderately priced. It retails for $8.

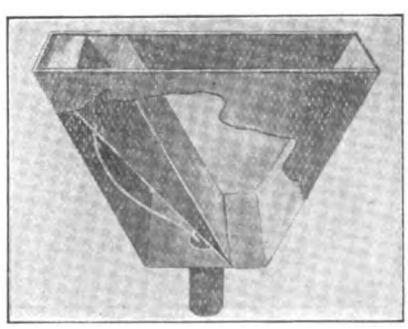
NO-SHAMMY FUNNEL.

Permits Fuel to Flow as Freely as with an Ordinary Funnel.

The No-Shammy funnel is manufactured by the No-Shammy Products Company, Cleveland, O., and is marketed by Chas. E. Miller, 97-103 Reade street, New York City. One of the qualities of the design is that the gasoline will flow as readily as through an ordinary funnel not equipped with a screen or filtering means. With the No-Shammy the fuel passes through quickly, while all water and foreign elements are trapped.

The principle of operation is the difference between the specific gravity of gasoline and water. When the fuel is poured into the funnel, any water and heavy sediment in it immediately settles to the bottom of the funnel, while the gasoline floats off through a gauze member. The particles of dirt held in suspension are prevented by the gauze from passing over.

It is pointed out that water can rise to the top of the funnel, as the film of gasoline over the gauze prevents it passing through. This is secured by scientific determination of the angles of the walls, position and mesh of the gauze, etc. The No-Shammy funnel is not only inexpensive, but is sturdily constructed and guaranteed. It is made in three sizes, for garage, owner and for motorcycle. The size which is designed for owners retails for $2.



Digitized by Google

STANDARD SIGNAL LAMP.

Warns Following Vehicle by Use of Colored Compartments.

The Standard Signal Lamp Company, Sanford building, Bridgeport, Conn., is manufacturing the Standard

signal lamp, which is designed to notify cars approaching and travelling in the same direction the driver's intentions. It is a neat, semi-cylindrical housing of three compartments, each fitted with a tungsten bulb, controlled separately or in combination. The "Left" compartment is red; the "Stop" black and "Right" green. The different colors enable the driver of the following vehicle to distinguish the compartment more easily. The device also includes an electric tail light and a bracket for the number plate, which is lighted from the tail lamp. The lamp complete sells for $5.

KNOPF RECORDER.

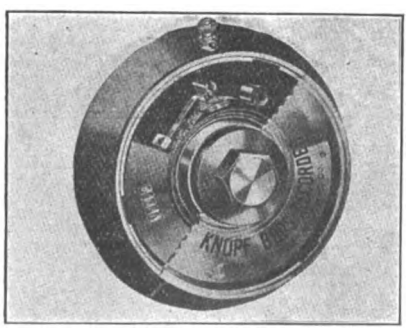
Registers Mileage Distance, Stops, Etc., on Removable Tape.

The Knopf Bros. Manufacturing Company, Inc., 2071 Seventh avenue, New York City, has brought out a new type of mileage recording instrument, the operating mechanism of which is contained within a case which is attached to the wheel by several screws entering the spokes or hub flanges. The screw heads, however, are inside the case, which is provided with a lock.

The mechanism is suspended inside by ball bearings with a weight to maintain it in its proper position. The odometer is operated by a cam located inside the case, which strikes a roller once during each revolution of the road wheel, actuating an arm which moves a ratchet wheel one notch. The odometer registers to 10,000 miles and repeats, but it cannot be set back without completely disassembling.

A cylinder in the upper end of the odometer rotates once for each mile travelled by the car, causing an arm to oscillate with a slow, continuous motion, once for each mile. The arm carries at its upper end a stylus, which produces a record on a tape as it is drawn out from a little round box at the top of the instrument.

At the right of the weight is a clock which will run for 36 hours on one winding. It is geared to a large drum surrounding the central wall of the instrument, upon which the tape is wound at such speed that the stylus comes opposite the hour marks



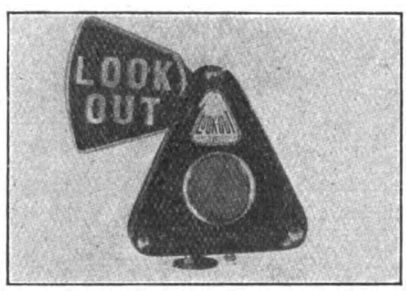
at the proper time. The tape is sensitized so that the pressure of the metallic stylus traces a line upon it, and it is graduated into three-minute periods, two inches being allowed for each hour. The recorder registers starting, stopping and operation of the vehicle, as well as the rate of speed, and they are outlined on tape.

BAER ALARM SIGNAL.

Shows Plate Bearing Words "Look Out" and Is Operated by Button.

The Baer alarm signal is marketed by the Baer Manufacturing Company, Philadelphia, and is an ingenious warning device which differs from those of conventional design. It is operated by the current of a storage battery or similar source of supply, and when the circuit is closed a plate bearing the words "Look Out", rises from its normal position in a case. The movement of the signal is accompanied by a loud "click".

With the Baer design provision is

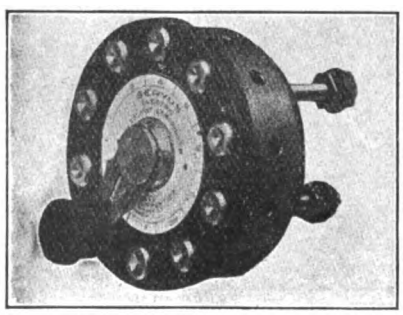


made to indicate the proper working of the signal, a miniature telltale located next to the press button showing when the device operates properly. The button fitting is constructed for convenient attachment on the steering wheel. The device comes complete for attachment.

SERVUS HEADLIGHT DIMMER.

Controls Lights from Dim to Bright and Extinguishes Them.

The Servus Equipment Company, Newark, N. J., is marketing the Servus headlight controller for cars equipped with electric lighting. It is designed to enable the driver to dim, extinguish or brighten the

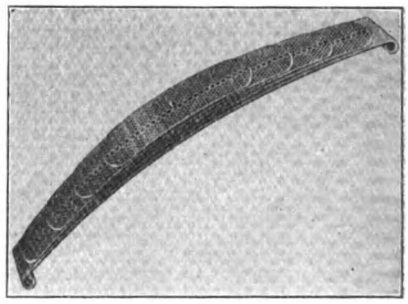


lights without leaving the seat. The device comprises a coil of special resistance wire divided into 10 sections with contact points so arranged as to allow all, any part, or none of it to be brought into circuit. When the lever is placed on the "low" point the lights will burn dimly. Moving the lever to other points increases the strength of the current and proportionately. There is also an "off" position. The device is installed in place of the usual switch and the regular wires are utilized. The Servus dimmer retails for $5.

DANN SPRING INSERT.

Forms Oil Cushion as Well as Provides Constant Lubrication.

The Dann Oil Cushion Spring Company, 2246 Indiana avenue, Chicago, is marketing the Dann oil cushion



spring insert, which insures constant lubrication of the leaves. As will be noted by the accompanying illustration, the insert is provided with a large number of apertures, which are filled with a lubricant. Being inserted between the conventional leaves the latter are always lubricated, and one of the qualities of the design emphasized is that the insert will provide lubrication for a considerable period.

It is pointed out by the maker that an ordinary spring having a number of leaves of graduated lengths contains an enormous area of surfaces, which means considerable friction is present if the surfaces are not constantly lubricated. The Dann insert provides this desired lubrication, eliminating squeaks as well as minor vibrations. It is easily installed and is made in different sizes. Price lists will be mailed upon request.

MORGAN SPRING OPENER.

Practical and Inexpensive Tool for Separating Leaves of Spring.

The Morgan Manufacturing Company, Newport, R. I., maker of tools, accessories, etc., for the motor car and repair shop, is marketing the Morgan rolling spring leaf opener, a simple and practical design in that it requires no adjustment. It is constructed especially for separating the leaves of a spring, permitting of cleaning and lubricating the bearing surfaces without jacking up the car.

As will be noted by the accompanying illustration, the device comes in two parts, one of which is provided with a chisel point. This is inserted between the leaves of the spring near the end and the edge of the rolling tool on the other side. Previous to this work the small bolts are removed from the spring clip. By rolling toward the centre of the spring or towards the axle, the leaves will be separated easily and readily.

One of the qualities of the device is that it is manufactured in various sizes, these ranging from that adapted to a cyclecar to that for a locomotive. The 75-cent size fits springs up to and including two inches. All are nicely finished.

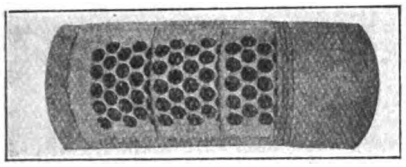
LEE PUNCTURE PROOF TIRE.

Construction Includes Hardened Steel Discs Which Overlap.

The Lee Tire & Rubber Company, Conshohocken, Penn., is manufacturing the Lee puncture proof tire, so



called because it is stated to be impervious to nails, etc., which ordinarily penetrate the tread and fabric of conventional types of shoes. An accompanying illustration shows the construction of the Lee puncture proof tire and it will be noted that a large number of metal discs are imbedded under the tread within the tire.

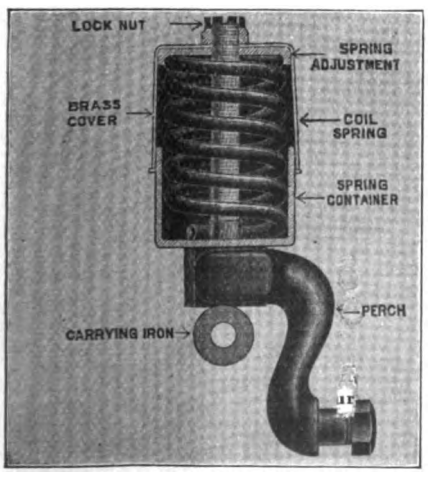
The discs are of hardened laminated steel, and while they overlap, they do not touch. It is stated that they reinforce the tire body, and at the same time protect it and the inner tube from articles that would puncture, also from the effects of water or moisture. It is added that the resiliency of the shoe is not affected and that it will not heat. A cash refund is included in the selling agreement. The Goodby-Rankin Company, Providence, R. I., is Rhode Island distributor.

ELK SHOCK ABSORBER.

Specially Designed for Ford Cars and Is Adjustable.

The Ely shock absorbers for Ford cars are marketed by the Donnelly Motor Equipment Company, 1785 Broadway, New York City, and come in sets of two and four, being adapted to both the front and rear springs. One of their qualities is that they eliminate the disagreeable vibration when traversing pavements, as well as take care of heavier shocks when operating on rough highways, etc. Another feature of the Ely is that provision is made for adjusting the tension of the coil spring to conform to the varying weight of the equipment, passengers, etc.

As will be noted by an accompanying illustration, the design is of simple construction and is one that should make for efficiency and durability. It comprises a coil spring of a high grade, tempered steel; a carrying iron and a perch. The spring is contained within a brass cover, which is made oil tight in case the use of lubricant is desired. The principle of the Ely absorber is a spiral auxiliary spring providing a pivot point suspension.

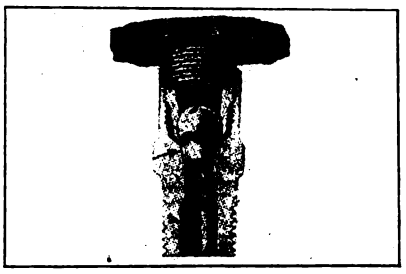


The absorbers are easily fitted, the maker stating that any owner can attach them in a few minutes. They are made for both the front and rear springs, and are guaranteed against imperfection of workmanship and material for one year. They come finished in specially prepared black rubber and the selling proposition is an interesting one, both to the trade and purchaser. Being constructed to eliminate minute vibration, as well as shocks, they save tires and the car mechanism from undesirable stresses. Sets of two retail for $7. Complete sets sell for $12.50.

MORGAN PRIMING CUP.

May Be Utilized When Motor Is Hot and Has Novel Valve.

The Morgan Manufacturing Company, Newport, R. I., is marketing a practical form of priming cup which



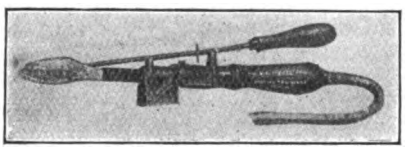
presents several interesting features, among which is that it may be operated when the motor is hot without burning the hands. As will be noted by the accompanying illustration, the head or operating member is composed of a non-conducting heat material.

The base is made of steel, threaded at its lower end as usual to fit the cylinder, while the upper is tapped out to receive the cup portion. The base is provided with a bevel shaped seat into which fits a ball shaped valve which is free to revolve. By inserting the cup portion into the base the ball shaped gas tight valve finds its own centre. The ball valve is fitted with a slot so that it can be ground with a screw driver when necessary. Priming opening is large.

READYHOT TORCH.

Utilizes Gas or Acetylene and Is Adapted for Brazing.

The Nemo Chemical & Specialty Manufacturing Company, 510 Rector building, Chicago, is marketing a



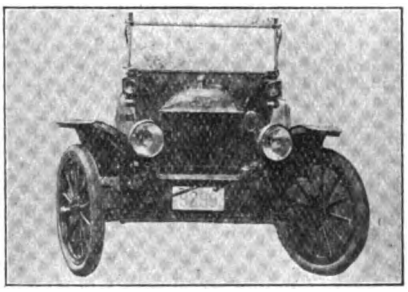
very practical and useful article both for the public and private garage. It is termed the Readyhot brazing and soldering torch, and one of the qualities of the design is that it can be employed for brazing and soldering.

The supply of fuel for obtaining the desired temperature may be secured from the regular gas supply or from a Prest-O-Lite tank, suitable connections being provided. The Readyhot torch is always ready for service, and it is stated that there is no delay in obtaining the necessary heat, and that a steady temperature is maintained. It can, however, be adjusted for any desired heat. The alternating inspirator is so graduated that practically any metal can be heated to a melting point in a short time. Owing to the unique construction the torch can be utilized in soldering equipments. It sells for $5.

CLEAR AHEAD LAMP BRACKET.

Turns Headlights in Same Direction as Steering Wheel.

The disadvantages of the fixed type of headlights are well known to experienced drivers. Even when oper-



ating on a straight road the rays of light are not sufficiently deflected to enable a driver to note the condition of the thoroughfare when turning out for an approaching vehicle. And in rounding curves, especially on unknown roads, the light does not illuminate the inside of the curve so as to reveal any possible obstructions that may exist.

The Auto Protector Company, 58 Tyler street, Springfield, Mass., has brought out the Clear Ahead lamp bracket, which is held to solve these problems, and one of the qualities of the design is that it can be attached without alterations. That shown in an accompanying illustration is the bracket made for the model T Ford machine, and it will be noted that the lamps are turned at the same angle as the road wheels.

In addition to the Ford design the company manufactures an equipment for larger machines, a standard size. Both types are moderately priced.

HICKS FOUNTAIN BRUSH.

Has Long Handle and Adjustable Nozzle and Keeps Hands Dry.

The Howard W. Hicks Brush Company, 826 18th street, Denver, Col., is manufacturing the Hicks perfect fountain brush. It will appeal to owners who wash their cars, as by it the work may be performed without soiling the clothes or placing the hands in the water. The last named advantage makes for comfort when the machine is washed in cold weather and when the garage is not equipped with means for heating the water.

The brush parts are made of aluminum and the 18-inch handle is of nickelled steel, equipped with a rubber grip. The handle is provided with a standard connection permitting of screwing on the ordinary garden hose. The brush is also detachable. One of the qualities of the brush emphasized is that a rotatable water chamber prevents wear on one side. The handle is equipped with a cut-out, permitting control of flow of water as desired, making for economy. The Hicks fountain brush sells for $5.

NEW CONCERNS RECENTLY INCORPORATED.

CAR MANUFACTURERS.

Dauch Manufacturing Company, Sandusky, O.; $800,000; to manufacture motor vehicles; J. J. Dauch, Daniel E. Storms, R. D. Mitchell, J. A. Giedeman, Charles Dick.

Nicholas Griffin Company, Chicago, Ill.; $50,000; to manufacture automobiles and supplies.

Pull-More Motor Truck Company, Detroit, Mich.; $250,000; Frank C. Kruger, Henry M. Market, Ralph S. Moore, Marvin A. Smith.

Armstrong-Johnson Manufacturing Company, Columbus, O.; $10,000; to manufacture automobiles; Minter Armstrong, J. H. Johnston, J. D. Loomis, James R. Johnston, J. G. Obermeyre.

Szekoly Cyclecar Company, Richmond, Va.; $50,000; James Pennington, Richard Burroughs.

Cricket Cyclecar Company, Detroit, Mich.; $40,000; G. F. Burton, V. F. Dewey, K. B. White, W. L. Davis, Macy Lyon, O. C. Hutchinson.

Milwaukee Cyclecar Company, Milwaukee, Wis.; $25,000; to manufacture cyclecars; Charles J. Eigel, Stanley Eigel, Samuel P. Carroll.

Motor Finance Company, Ltd., Montreal, Can.; $50,000; to manufacture motor vehicles, engines, etc.; Adolphe Kornbloom, Edwin N. Todd, Edwin A. Mumford and others.

Kennedy & Ahrens Company, New York City; $14,000; to manufacture trucks and automobiles; J. P. Kennedy and others.

Entz Motor Car Corporation, Baltimore, Md.; $3,000,000; to manufacture cars using the Entz electric transmission.

Flexible Side Car Company, Marion, O.; $25,000; to manufacture cyclecars, motorcycles, etc.

Model Motor Company, Los Angeles, Cal.; $1,000,000; to manufacture automobiles.

Johnson Motor Company, Fort Erie, Ont.; $1,000,000; to manufacture automobiles.

Silent Motor Car & Engineering Company, Los Angeles, Cal.; J. H. Grube, E. T. Houston, S. T. Allen, F. M. Casey.

Cleveland Cyclecar Company, Cleveland, O.; $200,000; C. Savage, W. H. Noyes, R. Clarke, F. H. Schmidt, W. E. Burns.

AUTOMOBILE DEALERS.

Granville Automobile Company, Creedmore, N. C.; $25,000; to deal in automobiles; S. C. Lyon, I. E. Harris, Dr. R. G. Rogers, J. N. Norwood, W. B. Lasley, W. D. Daniel.

The Six Cities Motors Company, Cleveland, O.; $10,000. $10,000.

Columbus Auto Company, Columbus, Miss.; $10,000; Samuel Kaye, H. J. Applewhite and others.

Thompson Motor Company, New London, Conn.; $2500; Leon C. Buzzell and others.

Auto Sales Company, Wheeling, W. Va.; $25,000; to deal in automobiles; W. C. Evans, J. M. Denham, C. McConaghey, Walter McMullin, H. J. Kiel.

Progressive Motor Company, Alexandria, Va.; $10,000; to deal in automobiles; Paul H. Macneil, R. L. Macneil.

Moon Auto Company, Lexington, Ky.; $3000; to deal in automobiles; B. B. Reed, E. H. Reed, P. McCann.

Ultimate Car Company, Chicago, Ill.; $5000; to deal in motor cars and supplies; Maurice Alachuler, N. A. Stern, Charles S. Pickett.

British Automobile Company, Brooklyn, N. Y.; $1000; to deal in automobiles and supplies; Roscoe Humphrey, Louisa E. Feather, Tom Feather.

Star Automobile Exchange Company, New York City; $5000; S. Schulmand, Henry Selnik, Max Weiner.

Middlesex Auto Company, New Brunswick, N. J.; $30,000; to conduct an automobile business; George H. Raddin and others.

West Side Motor Car & Supply Company, Fulton, N. Y.; $2000; to operate a general automobile business; Robert E. Harrison, Ellen V. McGinnis, John J. McGinnis.

Reo Motor Car Company, New York City; $3000; to deal in automobiles; J. H. Shaw, R. H. Montgomery, W. M. Lybrand.

Beacon Motor Supply Company, Springfield, Mass.; $10,000; to deal in automobiles; J. B. Bedford, L. G. Carlton, C. F. Munn.

Conklin-Spindler Auto Company, Chicago, Ill.; $2000; to deal in automobiles, etc.; Alva L. Spindler, Maurice Kohn, Charles E. Conklin.

Clark Auto Company, Minneapolis, Minn.; $25,000; to operate a garage and deal in automobiles; Frank C. Clark, Clem Bofferding, John A. Cronholm.

Union Sales Association, Terre Haute, Ind.; $5000; to deal in machinery, automobiles, etc.; J. R. Finkelstein, G. C. Buntin, H. D. Hughes.

Wisconsin Cyclecar Company, Milwaukee, Wis.; $25,000; to deal in cyclecars; W. B. Christie, W. H. Schwab, W. Fernekes.

Motor Cleaning Company, Rochester, N. Y.; $50,000; to conduct an automobile business; H. D. Carlton, G. D. Forsythe, M. F. Clark.

Northwest Motor Company, Seattle, Wash.; $25,000; G. H. Tilton.

Erie-Penn Auto Company, Pittsburg, Penn.; $25,000; John Z. Miller, S. Farmer, R. J. Farmer.

Dobbins Automobile Exchange, Newark, N. J.; $50,000; to deal in automobiles.

Hainlen Company, Harrisburg, Penn.; $5000; to deal in automobiles.

Grant Motor Livery Company, Chicago, Ill.; $2500; to conduct a general automobile business.

East Ohio Auto Sales Company, Youngstown, O.; $10,000; to conduct an automobile business.

Imperial Auto Company, Bowling Green, Ky.; $8000; J. B. Lucas, J. W. Massey, J. M. Lovell, G. D. Vance.

F. W. Walsh Auto Service Company, Newark, N. J.; $25,000; to conduct a general automobile business; Frederick H. Walsh, H. D. Brangwin, Samuel P. Watson.

H. E. Throne Automobile Company, Toledo, O.; $30,000; to deal in motor cars; H. E. Throne, F. C. Schaal, G. C. Bradley, C. J. Clapp, W. H. Schroeder.

Bryan Automobile Company, Bryan, O.; $15,000; C. W. Gleason, E. D. Spangler, J. M. Roe, W. T. Gardner, H. W. Gardner.

Car-Nation Auto Sales Company, Youngstown, O.; $10,000; to deal in Car-Nation cars; M. H. Squires, B. O. Schulman, A. Kessler, I. Wikoff, L. J. Schulman.

PARTS AND FITTINGS.

Brann Wrought Iron Castings Company, New York, N. Y.; $250,000; to manufacture castings for automobiles and trucks; M. O. Garner, F. Wesley Parker, T. B. Freese.

Motor Air Pumping Company, Wilmington, Del.; to manufacture motor air pumps, etc.; W. M. Pyle, G. C. Steigler, L. W. E. McCarthy.

United States Radiator Corporation of Massachusetts, Boston, Mass.; $10,000; William H. Thayer, Henry T. Cole, William E. Mosher.

Cleveland Auto Radiator Company, Cleveland, O.; $20,000; J. S. Dickie, Frank C. Carpenter, William Schoellkopf, Frank H. Smith, F. E. Dallenbaugh.

Fisk Battery Box Company, Cleveland, O.; $10,000; L. A. M. Pejau, J. L. Fairbanks, William K. Patterson, H. M. French, A. W. Thomas.

Accessory Forgings Company, Detroit, Mich.; $10,000; Frank J. Sherman, F. A. Sherman, Fred A. Behr, Raymond E. Lake.

Racine Rubber Tire Company, New York City; $3000; to deal in tires; E. Storms, Jr., E. W. Drucker, Barclay Ball.

Motor Radiator Corporation, Buffalo, N. Y.; $50,000; Charles W. Dipport, Edward W. Werick, William M. Causley.

Frank P. Gallagher Company, New York City; $25,000; to deal in motor vehicle tires; Moses Sneft, Harry Brower, Frank P. Gallagher.

Harris Tire Company, Savannah, Ga.; $40,000; to manufacture automobile tires; Capt. S. N. Harris, H. M. Garmany, C. S. Richardson, L. R. Rith, M. B. Brabham, J. F. Mosher, E. De Loach, J. L. Sellers.

Norwalk Tire & Rubber Company, Norwalk, Conn.; $1,500,000; Earle Banks, John Pierce, Sayer Youngs.

Delaware Tire & Supply Company, Wilmington, Del.; $25,000; N. B. Mancill, J. H. Bishop, P. L. Garrett.

Kramer Governor Company, Milwaukee, Wis.; $25,000; Chester A. Dodge, Hiram S. Powers, Oliver H. Lamont.

Fisk & Dunham Rubber Company, Trenton, N. J.; $50,000; to manufacture rubber goods; C. F. Fisk, R. C. Dunham, A. A. Taylor.

Engel Crude Oil Engine Company, New York City; $15,000; Henry Engel, Winfred L. Smith, John M. Mumford.

The Motor Tire Reconstruction Company, Jersey City, N. J.; $250,000; to manufacture rubber tires, etc.; C. N. King, G. H. Russell, W. L. Steck.

National Tire Company, Trenton, N. J.; to manufac-

Smith & Masters, Tucson, Ariz., has removed into a new garage at 72 North Sixth street.

The Chalmers-Syracuse Company, Syracuse, N. Y., is now located at 545 Clinton street.

The Auto Tire Company, San Diego, Cal., is now located in its new building, corner of Fifth and A streets.

The Western Motor Appliance Company, Charles City, Ia., has located at 201 Main street.

The D. C. Gilliland Auto Supply House, St. Louis, Mo., has moved to 3445 South Grand street. The company carries a full line of automobile accessories.

The Lynch Auto & Machine Company, Houston, Tex., has moved to 409 Capitol avenue. The company was formerly known as the Recco Lynch Auto & Machine Company.

The Proeby Motor Company, Washington, D. C., has moved to 1223 New York avenue.

The Grady-Rourache Motor Car Company, Salt Lake City, Utah, agent for the Reo cars and Chase trucks, is now located at 344 South State street.

The Mitchell Auto Company, Little Rock, Ark., agent for the Mitchell cars, has moved to 300 Louisiana street. The old address of the company was 119 North Louisiana street.

The Plaza Motor Company, New York City, has leased quarters in the building at the corner of Broadway and 64th street.

The Winton Motor Company, Chicago, Ill., will move to its new building on East 35th street.

The Detroit Electric & Motor Car Company, Dallas, Tex., local distributor for Detroit electrics, is now located at its new showroom and garage at 415-417 North Harwood street. A. A. Marrs is president and general manager.

The Bertram Motor Supply Company, Salt Lake City, Utah, has moved to more commodious quarters at 342 South State street.

Osborne & Holden, Cleveland, agent for the Chase trucks, will move to new quarters at 216 East Ninth street.

C. S. Luker & Co., Monmouth Junction, N. J., has erected a new garage and repair shop and will move to the new building in the near future.

The Howard Auto Company, Oakland, Cal., has moved into new quarters on Piedmont avenue. The company handles the Buick cars.

The Empire Tire Company, Houston, Tex., has located at 1207 Main street, to establish a sales depot for tires and accessories. The company also handles the Mercury cyclecars.

The Meredith Motor & Bicycle Company, Salt Lake City, Utah, is now located in its new quarters at 58 East South Fourth street.

Whalen & Hansen, Cresco, Ia., has moved its electric service station to 118 First avenue, East, where it has installed new machinery. The company is now prepared to take care of repairs of all kinds. A full line of supplies is also carried.

The Northwestern Automobile Training School, St. Paul, Minn., has moved to 344 North Exchange street.

The Metuchen Automobile and Garage Company, Metuchen, N. J., has moved into new and larger quarters on Middlesex avenue.

The Grant Bros. Auto Company, Detroit, will move into larger quarters at 234 Jefferson avenue.

The Selby Company, Washington, D. C., is now located at 1805 14th street. The company is agent for the Paige cars.

The Craig Center Auto Company, Pittsburg, Penn., has moved into a new building on Grand boulevard.

The Detroiter Philadelphia Company, Philadelphia, has moved from Market street to larger quarters at 506 North Broad street.

The Myers Motor Car Company, San Francisco, Cal., agent for the Apperson cars, will move to larger quarters on Van Ness street.

The Sofield Auto Company, Asbury Park, N. J., has moved from its old quarters on Bangs avenue to its new and up-to-date garage on Main street, Avon.

Raymond Spellmum, Viroqua, Wis., is prepared to handle any kind of automobile repairing. He is now located in the Larson building.

Joseph Strauss & Son, Buffalo, N. Y., is to occupy the new building at 215 Genesee street, which has five floors and a basement. The company deals in supplies for pleasure cars, and in its new location will be better able to handle the steadily growing business.

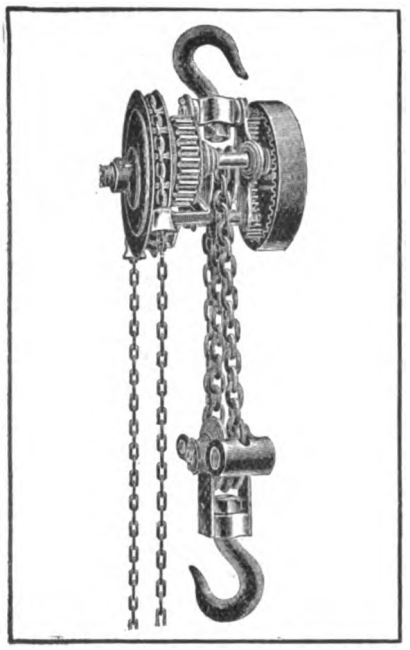
The Woods Motor Vehicle Company, Chicago, has taken a lease of the corner store in the Colonnade building on Michigan avenue and Peck court. The company will use it for a sales and display room.

The Iver Johnson Sporting Goods Company, Fitchburg, Mass., has purchased the garage at 27 Lunenburg street and will move to that location in the near future. The company handles the Ford cars.

Digitized by Google

MACHINERY, TOOLS AND EQUIPMENT.

THE need of some form of chain hoist in the garage and repair shop is more marked than formerly when the practise was to cast the motor cylinders singly and in pairs. The en bloc casting is difficult for one or two men to handle, especially if the engine is a six-cylinder unit.



Simplex Two-Speed Chain Hoist.

J. G. Speidel, Reading, Penn., is manufacturing the Simplex chain hoist, one of the qualities of which is that it is a two-speed device, a construction saving time where the load to be lifted is of varying weight. As will be noted by an accompanying illustration, an endless chain runs over a chain wheel, which, in connection with a pinion and a brake wheel with ratchet teeth in the outer rim, forms the automatic brake, which prevents the load from descending. These three parts, when assembled, make practically a unit construction, and turn loosely on the reduction extension of the main shaft.

The pinion attached to the hand chain wheel drives a spur gear, which is keyed to a second shaft, at the end of which is another pinion. The last named member engages with an internal spur gear, which is keyed to the opposite end of the main shaft, to which is attached the lift chain wheel. Motion is transmitted from the hand chain to the lift chain, and by pulling on the hand chain, in either direction, the load is lifted or lowered. When hoisting a load the brake wheel, with its ratchet teeth on the outer rim, rotates freely with the hand chain wheel and pinion, and without resistance, as the ratchet pawl runs freely over the teeth. When the pull on the chain wheel ceases, the pawl engages with the teeth of the ratchet on the brake wheel, preventing it from running backward, and so keeping the load suspended.

In lowering the load the hand chain is pulled in an opposite direction, and but little effort is required to overcome the friction of the automatic brake, thus permitting the load to descend and holding the same suspended again, as soon as the workman stops pulling on the hand chain. The load can be lowered at a good rate of speed by a continuous pull upon the hand chain.

By means of an ingenious arrangement of the lower block, the lift chain is locked to the chain wheel of the lower block, providing the two speeds referred to, making for economy of time in handling light loads. Closed rings attached to a swinging frame provide guides for the hand chain, enabling the operator to stand away from under a load, pulling the chain at an angle, without producing any appreciable amount of friction or wear on the chain or guide. The construction eliminates the possibility of the chain wedging between the wheels and guides. Price lists will be supplied upon request.

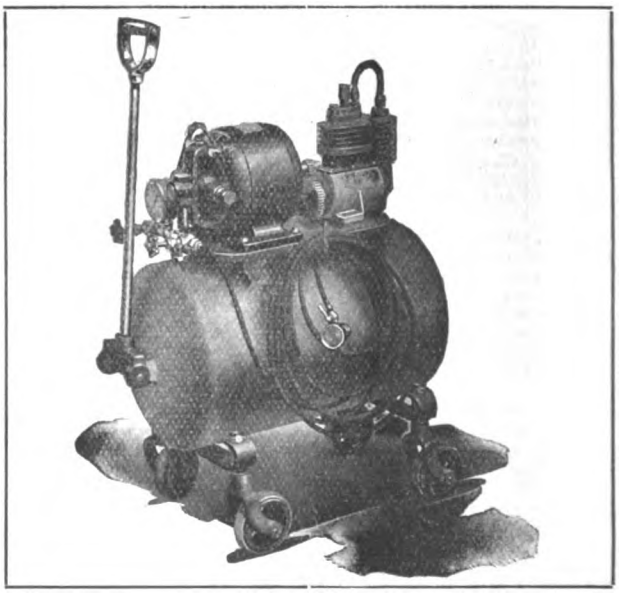
GEMMER-DETROIT PUMP.

Electrically Driven Garage Equipment Designed to Withstand Heavy Service.

The Gemmer-Detroit Starter Company, Detroit, which concern has announced a pneumatic starting system for motor cars, is manufacturing electrically operated pumps for the garage, and one of the types is shown in an accompanying illustration. This is a portable design.

Efficiency is one of the qualities of the outfit emphasized. The pump is a four-cylinder, air-cooled unit, the cylinders having a bore of 1.5 inches and stroke of 1.75. The tank has sufficient capacity to inflate 15 34 by four-inch tires with one filling. It is stated that the pump will renew the air supply quickly, and that 175 pounds pressure can be pumped up in 20 minutes.

One of the features of the equipment is the elimination of the usual platform. The running gear is of heavy metal strips welded directly to the tank, and the rubber tired wheels are swiv-



Gemmer-Detroit Garage Pump.

elled to these strips. The company also manufactures a type designed for the private car owner and the service of small garages.

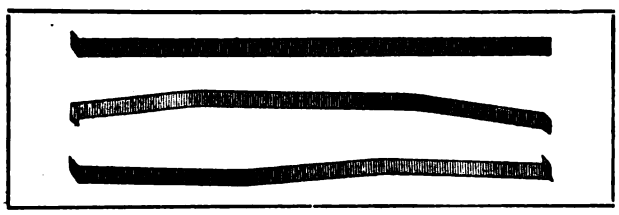
MORGAN SCRAPERS.

A Flexible Tool with Ends Bent to Make Easy Removal of Carbon from Cylinders.

The Morgan Manufacturing Company, Newport, R. I., is marketing the Morgan carbon scrapers which come in sets of three. The tools



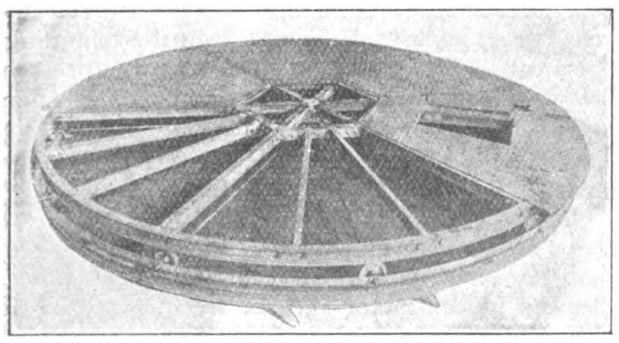
Morgan Flexible Carbon Scrapers.

are constructed of a high grade of steel, are flexible, and two have their ends bent to right angles and sharpened for removing deposits from the top of the cylinders or pistons. The third tool is straight, but both ends are sharpened for scraping around valves and their seats, etc. The set retails for 50 cents.

AMERICAN TURNTABLE.

Consists of Steel Frame and Plates and May Be Utilized as a Wash Rack.

The Minneapolis, Minn., branch of the American Bridge Company, is producing the turntable shown herewith, which is constructed in two sizes, 14 and 15 feet respectively. The table consists of a steel frame constructed of three-inch I beam section, carrying .25-inch steel plates. The table rolls on 12 cast iron wheels, these being carried on a spider having spacing bars. The top plates of the table are perforated, permitting of



American All-Steel Turntable.

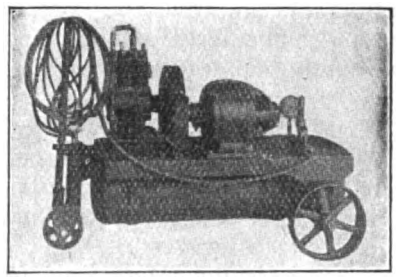
its use as a washstand if desired. One plate is made removable so that inspection and lubrication are made easily.

MASTER GARAGE PUMP.

Hartford Machine Screw Company Marketing Moderately Priced Electric Unit.

The Hartford Machine Screw Company, Hartford, Conn., is producing a line of electrically operated garage pumps, one of which, the model G, is illustrated herewith. It is provided with a storage tank mounted beneath the platform and the container has a capacity of 2300 cubic inches. It is stated that it may be pumped up to a pressure of 200 pounds a square inch in less than 10 minutes.

The motor is a standard type and the company supplies either an alternating or direct design for 110 volts, the direct listing at $5 extra. The regular equipment includes a connection plug for the light socket, 20 feet of heavy lamp cord and 20 feet of high grade air hose with tire pressure gauge attached. The overall dimensions are: Length, 40 inches; width, 24; height above floor, 33, and weight from 375 to 450 pounds, depending on the type of motor utilized. The platform is sturdily constructed, equipped with wheels, and a convenient handle is provided. The equipment can be moved easily about the garage or rolled out on the road when tires are to be inflated. It is stated that when thus used the tank will inflate four 37 by five-inch tires to 90 pounds pressure without starting the motor.



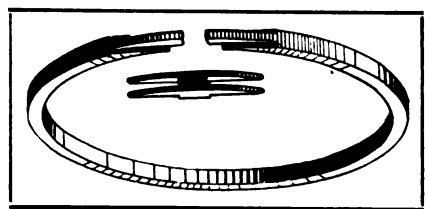
Master Electric Garage Pump Outfit.

The company manufactures a similar but smaller type, known as model N. It is portable, but no tank is provided, the pump connecting directly to the tires. It is stated that the pump will inflate a 37 by five-inch tire to 90 pounds pressure in 2.75 minutes. The regular equipment includes 10 feet of air hose with pressure gauge attached and 20 feet of flexible lamp cord with plug connector. The overall dimensions are: Length, 28 inches; width, 16; height from floor, 18. The weight is about 100 pounds with alternating or direct current motor, both being 110-volt. The model N is also supplied mounted on a base for stationary work. Data on garage pumps will be supplied by the company upon request.

BURD PISTON RINGS.

Utilizes a Bronze Coupler to Obtain a Gas Tight Construction.

R. L. Burd, 818 South Main street, Rockford, Ill., is manufacturing the Burd high compression ring shown in an accompany illustration, and the ring is shown relaxed and coupler detached, ready to be sprung over the piston. After the ring is sprung over the piston, the bronze coupler is inserted, and it is stated that the two lock together as the cylin-



Burd Compression Piston Ring.

Digitized by Google

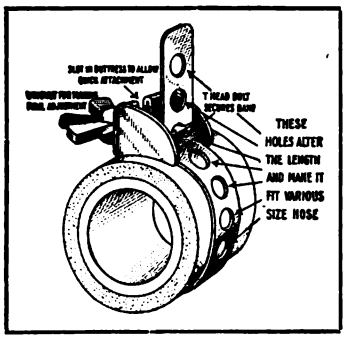
der is slipped over the construction.

It is claimed that the design provides an equal pressure on the cylinder walls, and that the coupler seals the opening effectually, preventing the passage of oil or the mixture. The maker states that the rings have been subjected to severe tests in service and that they will considerably improve the compression of any motors, particularly old engines. The Burd rings come in standard sizes up to six inches.

MORGAN HOSE CLAMP.

Is Quickly Attached and Fits Intermediate Sizes Within Its Capacity.

The Morgan Manufacturing Company, Newport, R. I., is marketing a clamp or coupling for hose which presents several practical features, the most noticeable of which is that it will fit any intermediate sizes of pipe within its capacity. As will be noted by the accompanying illustration, it includes a flat band and buttress, and a slot in the latter permits of quick attachment. The band is secured by a T head bolt carrying a wing nut, and one of the qualities of the design is that no tools are necessary to adjust the clamp. As will be noted by the drawing, the band is provided with several holes for the purpose of fitting different sized hose. The type 10 is constructed of stamped brass with nut of similar material and the steel screw has a fine thread. The clamps come in different sizes and are inexpensive.



Morgan Hose Clamp.

MONARCH WELDING OUTFITS.

Three Different Combinations, Including Decarbonizing Equipments, Marketed.

The profits and advantages obtained through installing decarbonizing and welding outfits are very attractive even to the small repair shop, and among the high grade equipments marketed are those produced by the Monarch Manufacturing Company, Dayton, O. This concern has long made a specialty of welding apparatus, and is offering to the trade three combination outfits, which are shown in an accompanying illustration.

The No. 1 is a decarbonizing outfit and consists of one oxygen reducer, hose, etc., and is constructed especially for removing carbon from motor cylinders as shown. This method appeals to owners because of its thoroughness, time and labor saving qualities.

The No. 2 outfit is a combination equipment comprising a welding and decarbonizing apparatus having an oxygen reducer, welding torch and an acetylene reducer. The No. 3 includes the above named features, also a cutting outfit, and comprises two oxygen reducers, one welding torch, one cutting torch and an acetylene reducer.

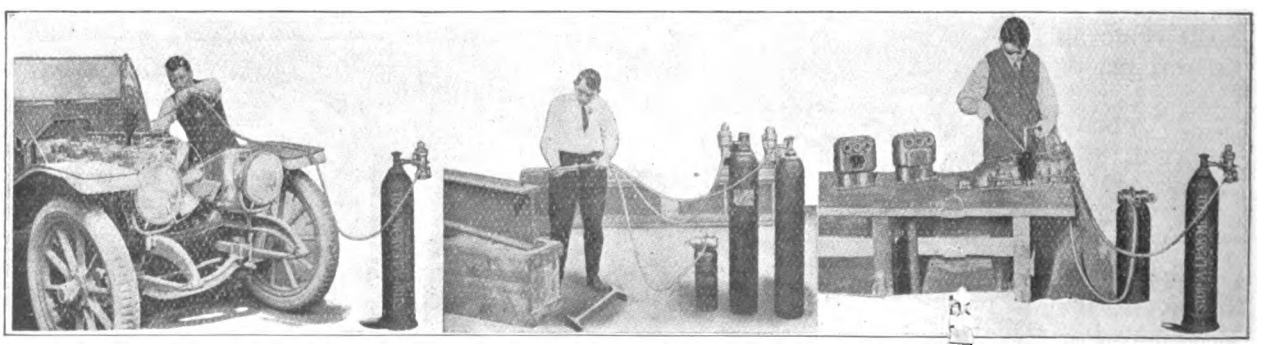
Special attention is directed to the Monarch reducing valve, which is stated to be correct in principle and simple in adjustment. It was designed especially for decarbonizing, welding and cutting purposes and for reducing gases of high to a safe working pressure. It is constructed to eliminate every possibility of a flashback, and comes complete with all necessary hose and fittings. The Monarch Manufacturing Company is making a special offer to the trade, particulars of which will be mailed upon request.

BLAC-NAMEL.

An air drying enamel prepared for refinishing headlights, side and tail lamps, radiator caps, etc., in black, has been brought out by the Atlas Auto Supply Company, 3241 West Lake street, Chicago. Blac-Namel, as it is termed, dries quickly, and has the appearance of baked on enamel, being smooth and glossy. It is stated that one coat is sufficient to keep the trimmings of a car in first class condition for an entire season. It comes prepared for use and is inexpensive.

BROKEN TAP EXTRACTOR.

The Frevert Machinery Company, 38 Vesey street, New York City, is manufacturing a broken tap extractor and six are included in the set. The sizes are .3125, .375, .875, .5, .5625 and .625 inch. Prices will be supplied upon request.



Illustrating a Few of the Uses to Which the Monarch Welding Equipment May Be Put.

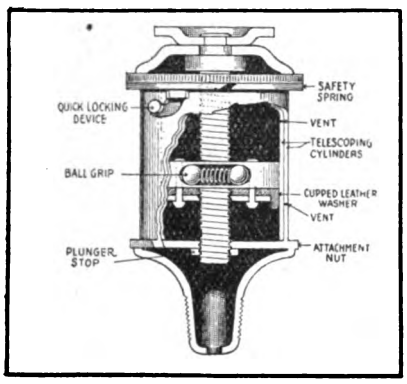
CLIMAX GREASE CUP.

Is of the Compression Type, Has Air Vent and a Quick Locking Device.

William J. Bailey, 407 Mulberry street, Newark, N. J., is marketing the Climax grease cup, a cut-away section being shown herewith to depict the construction. It is of the compression type, and it is stated that the top cannot drop off, even if the cup should be inverted. A slight pressure downward and to the left releases the inner cylinder, enabling easy filling, or the outer cylinder may be supplied if desired.



The Climax Grease Cup.

The cylinders are of drawn brass tubing and a close telescoping fit, preventing leakage and the entrance of road dust. The cylinder caps are of heavy brass, hard soldered to the cylinder, and the air vents in both cylinders are so located that renewing the supply of lubricant is very easy. When withdrawing the inner cylinder these air vents prevent suction, as well as the grease coming away with the part. A double ball grip is employed to prevent the plunger turning and wear. The Climax grease cup is produced in standard and special sizes.

UNI-COIL IGNITION SYSTEM.

New York Coil Company Brings Out New Design for Model T Ford Motors.

The New York Coil Company, 338 Pearl street, New York City, manufacturer of master vibrators and other well known accessories for the model T Ford car, has just placed on the market the Uni-Coil ignition system, which is especially designed to operate on the Ford flywheel alternating current magneto.

Uni-Coil Ford Ignition System.

The system consists of an elevated gear bracket attachment, which is clamped to the end plate of the motor after first removing the regular timer. Bevel gears transmit motion to a vertical shaft running through the bracket upon which is mounted a combined timer and high-tension distributor, or synchronizer, as it is termed. The new system eliminates all of the old wiring with the exception of a single lead, connection being made to only one unit of the coil box. A cable runs from the distributing part of the apparatus and is connected to the high-tension terminal of the same unit. The timing or circuit operating mechanism within the distributor is almost identical with that employed in regular magnetos.

The maker claims that the system times the spark perfectly and is the first to operate satisfactorily on the flywheel magneto. There is but one adjustment and troubles heretofore experienced with the Ford timer are eliminated. The system is easily cared for. Claims are further made to the effect that the system contains all the desirable features of the high-tension magneto. The list price of the attachment complete, including bracket, wires, etc., is $15. It is sold with a positive guarantee of satisfaction. Instructive literature fully explaining the device in detail will be sent upon request.

GROETKEN PUMP.

Is of the Self-Measuring Type and Is Adaptable for a Number of Purposes.

The J. J. Groetken Pump Company, Aurora, Ill., is manufacturing a pump for the convenient and economical handling of gasoline, kerosene, oils and other liquids. It is of the self-measuring type and can be made to serve a number of purposes. One of its qualities is that it can be employed with barrels as well as with underground systems. The construction is simple and accuracy in measuring is emphasized in the design.

Groetken Pump.

The pump proper consists of two seamless brass cylinders, to which are attached an iron cap and base. The cap is made in two sections, with the lower member chambered to permit the use of a fibre gasket, into which the ends of the cylinders are seated, making a tight construction. The base is machined and chambered where joined to the cylinders to provide an absolutely tight joint. The assembly is rigidly retained by four .3125-inch bolts, and the lid of the cap is clamped to the cap with .25-inch cap screws. It is stated that the gland stuffing box utilized in this pump prevents leakage around the crankshaft. The cap of the pump forming the housing for the crankshaft, also acts as an air chamber, facilitating the flow of the liquid.

RECENT CHANGES IN INSURANCE RATES.

New Fire and Theft Schedules for West and South and Revised Non-Valued Policy Rates in the East—Liability and Property Damage on Commercial Cars.

AT A meeting of the Automobile Underwriters' Conference in New York City, April 10, action was taken, as a result of which cars in the hands of dealers in the states of the West, Southwest and Southeast, may no longer be insured for fire and theft at pleasure car rates, even where the short rate cancellation is provided. The conference also adopted new schedules for the Western and Southeastern departments, the former affecting the states of Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Kansas, Nebraska, North Dakota, South Dakota, Wyoming, Colorado and New Mexico, and the latter the states of Virginia North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Arkansas and Oklahoma. These went into effect April 20.

WESTERN AUTOMOBILE SCHEDULE.

On gasoline power driven private pleasure motor cars and commercial vehicles, such as trucks, delivery wagons, based on manufacturers' original list prices:

	Class A.	Class B.	Class C.
Limits of amount of insurance include equipment, but not additional bodies. See additional equipment and additional bodies rules below	$3500 and over	$1500 to $3599	$700 to $1499
This and Next Year Models—Insure for not to exceed actual cost or less than 50% of original list price	1½%	1¾%	2%
Last Year Models—Class A, amount of insurance at option of company; Class B, not more than 70% of original list price; Class C, not more than 60% of original list price	1½%	2%	3%
Year Before Last Models—Class A, amount of insurance at option of company; Class B, not more than 50% of original list price; Class C, not more than 40% of original list price	2¼%	3½%	4%
Minimum premium	....	....	$15
Three-Year-Old and Older Models—Class A, amount of insurance at option of company; Class B, not more than 30% of original list price; Class C, not more than 20% of original list price	2¾%	4½%	5%
Minimum premium	....	$15	$10

Note—Exceptional cases may arise where car is well owned and is in very good physical condition where limits on "three-year-old and older models" are not sufficient. In such case refer to company, with full particulars, when slightly increased amounts may be allowed, but in no case to exceed 40 per cent. of original list price.

Reduction—A reduction of 50c from above rates will be allowed for attachment of "non-valued ex-theft and automatic reinstatement" indorsement by use of clause furnished you for that purpose.

Cars Listing Less Than $700.

	Rate	Minimum premium
Fire and theft	3¼%	$12.50
This and next year—		
Fire only	1½%	7.50
Fire and theft	3¼%	12.50
Last year and older—Fire only	3%	10.00

Electric Automobiles.

Rate for full form of fire and theft floater (all models) 1¼%
Rate for restricted form 1%

Dealers' Automobiles.

	Fire & theft floater	Restricted floater
New gasoline automobiles—		
List price $3500 or over	2¼%	2%
List price $1500 to $3499	2½%	2¼%
List price less than $1500	2¾%	2½%
Electric automobiles	2%	1¾%
Steam automobiles	3%	2¾%

No risk accepted where boiler and burner are located in rear of dashboard. Second-hand cars, 1 per cent. additional rate must be charged. Pro rata cancellation allowed with a minimum charge of $1.

SOUTHEASTERN AUTOMOBILE SCHEDULE.

Rates for the full form of policy, gasoline, pleasure and commercial type cars:

	Class A.	Class B.	Class C.
Original list price of automobiles when new, excluding cost of additional equipment and extra bodies	$3500 and over	$1500 to $3499	$1499 and less
This and Next Year Models—Insure for not more than actual cost	2½%	2½%	2½%
Last Year Models—Insure Class A for not more than 80%, Class B for not more than 60% and Class C for not more than 50% of list price	2½%	3%	3%
Year Before Last Models—Insure Class A for not more than 70%, Class B for not more than 50% and Class C for not more than 40% of list price	3%	3¼%	3½%
Three-Year-Old Models—Insure Class A for not more than 60%, Class B for not more than 30% and Class C for not more than 20% of list price	3¼%	4%	5%

Note—Second-hand cars, charge ½ per cent. in addition to above rates.

Electric Cars—Models of all years, 2 per cent.; second-hand cars, charge ½ per cent. in addition to above rate. Maximum insurable amounts at the option of underwriter.

Taxicabs, Livery and Renting Automobiles—All risks of this kind must be submitted to the home office. If approved, will be written at not less than 1 per cent. in addition to schedule rates, subject to the following indorsement:

"In consideration of $..... additional premium, permission is hereby granted for the automobile herein insured to be used for carrying passengers for a compensation, provided it is under the personal supervision and guidance of the assured or a chauffeur in his employ while being so used".

Rates for the Restricted Form of Policy.

(The theft and reinstatement features excluded from the full policy by attaching the indorsement provided for that purpose.)

Electric Automobiles, Taxicabs, Livery and Renting Automobiles, Gasoline Pleasure and Commercial Automobiles—A reduction of ½ per cent. allowed from the rates for the full form of policy.

Minimum Premium.

For the full form of policy $12.50
For the restricted form of policy 10.00

Dealers' Automobiles.

Rates for full form of policy:
New gasoline cars—
Listing for $3500 and over 2¾%
Listing for $1500 to $3499 ..... 3%
Listing for $1499 and less 3¼%
New electric automobiles, all models 2%
New steam automobiles, all models 3½%
(Subject to 1¼% reduction if boiler and burner are located in front of dashboard.)

For second-hand and rented cars charge 1 per cent. in addition to above rates. Pro rata cancellation allowed with a minimum charge of $1 except on cars listing for $1499 and less the minimum charge is 50c. Amounts of insurance at option of underwriter.

Rates for the Restricted Form of Policy—A reduction of ¼ per cent. is allowed from the above dealers' rate for the elimination from the full policy of the theft and reinstatement features. Minimum premiums same as above.

Fire Extinguishing Devices—A reduction of 15 per cent. of the premium is allowed if a device approved by the Underwriters' Laboratories of the National Board of Fire Underwriters is carried on the automobile and an indorsement provided for that purpose is attached to the

Digitized by Google

policy. This reduction, however, is not allowed on additional premiums for the theft full coverage, collision sustained and property damage.

European Privilege—At an additional rate of 1½ per

CLASS No. 1

AMOUNT FOR INSURANCE Including Equipment But Not Extra Bodies Subject to "Instructions and Limits"	Original List Price of Automobile, when New (Not Second Hand), Excluding Cost of Additional Equipment and Extra Bodies											
	6500 and Up	5500 to 6499	4500 to 5499	3500 to 4499	3000 to 3499	2500 to 2999	2000 to 2499	1500 to 1999	1300 to 1499	1100 to 1299	900 to 1099	700 to 899

500 to 599											3⅛	3⅛

All cars listed at less than $700 take a rate of 2½ %, irrespective of the amount insured, but the minimum premium for full form of policy shall be $12.50, or with theft and valued policy clauses eliminated, the minimum premium shall be $10.00

First Section of Rate Card Applying in New England. Middle Department and Metropolitan District.

cent. policies may be extended to cover a European trip under the form of indorsements provided for that purpose. If the risk of the transatlantic trip, going and returning, be eliminated, this privilege can be granted without extra charge.

SCHEDULE FOR EASTERN STATES.

The schedule for New England, the Middle Department and Metropolitan District was adopted by this conference about a year ago, and is presented in detail in the accompanying charts, in explanation of which it may be stated that all gasoline automobiles are divided for the purpose of rating into two general classes. Class No. 1 includes columns A, B, C and D, cars of last year, this year and next year models; E, F, G and H, cars of this year and next year, and J, K, L, M and cars listed at less than $700, cars of this year and next year, in hands of original owners. Class No. 2 includes all automobiles not coming within the definition of class No. 1. The remainder of the schedule follows:

Instructions and Limits.

Amounts to be insured must not be more than actual value and be limited as follows: Columns A, B, C and D, cars of this year and next year models for not less than 50% of original list price. Columns E, F, G and H, cars of this year and next year models for not less than 50% of original list price; cars of last year models for not more than 80% of original list price; cars of year before last models for not more than 60% of original list price; no policy on cars of models earlier than the above shall be issued for an amount in excess of 40% of original list price. Columns J, K, L and M, cars of this year and next year models for not less than 50% of original list price; cars of last year models for not more than 70% of the original list price; cars of year before last models for not more than 50% of original list price; no policy on cars of models earlier than the above shall be issued for an amount in excess of 40% of original price.

Additional Equipment.

In addition to the amounts fixed by these limits, additional equipment may be insured for not exceeding $300 on cars in columns A to H inclusive, and $200 on any other cars by means of the following form of indorsement:

"In consideration of an additional premium of $....., the sum insured under this policy is increased by $..... to cover the value of additional equipment not furnished with the car by the manufacturer at its list price; all other terms and conditions remaining unchanged".

Additional premium for this additional amount shall be charged for at the same rate as charged in the body of the policy. The rate on the policy to be computed without reference to this rider.

Electric Automobiles.

Rate for all models 1½%. A reduction of ⅛ of 1% for the elimination of theft and valued policy clauses is permitted using the indorsement provided for that purpose. Amount of insurance at discretion of company.

Steam Automobiles.

Cars of this year and next year models, rate not less than 3%. Cars of last year models, rate not less than 3½%. A reduction of ¼ of 1% is permitted if boiler and burner are located in front of dashboard. A reduction of ⅛ of 1% is permitted for the elimination of theft and valued policy clauses using the indorsement provided for that purpose. Amount of insurance at discretion of company.

Livery and Renting Automobiles.

All applications covering cars used for livery and for renting purposes must be submitted to this office. If approved they will be written subject to the following clause, not less than 1% additional being charged:

"In consideration of $..... additional premium permission is hereby granted for the automobile herein insured to be used for carrying passengers for a compensation, provided it is under the personal supervision and guidance of the insured or a chauffeur in his employ while being so used".

Additional Bodies.

In determining the original list price of automobiles having more than one body, the sum of the cost of the chassis and the higher priced body shall be taken as the original list price and the amount of insurance for the purpose of arriving at the rate to be charged shall be the amount insured on the chassis and the higher priced body. No change to be made in the classification of the car during the policy period.

In the case of an automobile equipped with an extra body or bodies, a specific amount must be applied to the chassis and equipment and to each body, the same rate being charged on the extra body or bodies as is charged on the automobile. The following clause to be used:

"In consideration of an additional premium of $....., on and after date this policy shall cover an additional amount of $....., which shall apply only on extra ..... body used in connection with the automobile insured hereunder, and the insurance on the chassis and original body shall be divided as follows: $..... on chassis and equipment; $..... on ..... body".

All other terms and conditions of this policy remaining unchanged.

Dealers' Automobiles.

On new gasoline cars charge 2¼% in columns A to D; 2½% in columns E to H, and 2¾% for all others.

On new electric cars charge 2% for all models.

On new steam cars charge 3¼% for all models, except where boiler and burner are located in front of dashboard, where a rate of 3% shall apply.

On all second-hand cars 1% additional rate must be charged.

Pro rata cancellation allowed with a minimum charge of $1, except that the minimum charge on new cars listed at less than $1500 shall be 50c.

Amounts insured at option of underwriters.

Note—Automobiles in the hands of dealers may be written under the ordinary form of policy at rates provided for private pleasure cars subject to cancellation on a short rate basis only, except pro rata cancellation may be allowed when a new policy is issued on the same car.

A reduction of ⅛ of 1% will be allowed for the elimination of theft and valued policy clauses, but in all cases the minimum charge of $1 and 50c shall apply as above indicated.

Commercial Automobiles.

Shall be written for amounts, and at the scheduled

CLASS No. 2

REVISED NON-VALUED POLICY RATES.

The revised schedule of rates for non-valued form of policy, excluding theft and reinstatement clauses, applying to New England, the Middle Department and Metropolitan District, in effect April 20, is as follows:

Gasoline Pleasure Cars.

	Per Cent.
Cars of this and next year models—	
Insured for not less than 80% of list price	1½
Cars of last year models—	
Listing $3500 and over	1½
Listing $1500 to $3499, insured for not exceeding 80% of list price	1¾
Listing under $1500, insured for not exceeding 70% of list price	2
Cars of year before last models—	
Listing $3500 and over	2
Listing $1500 to $3499, insured for not exceeding 60% of list price	2¼
Listing under $1500, insured for not exceeding 50% of list price	2½
Cars of models three years old—	
Listing $3500 and over	3
Listing $1500 to $3499, insured for not exceeding 40% of list price	3
Listing under $1500, insured for not exceeding 40% of list price	3½
Four-year-old models and older—	
Minimum rate, insured for not exceeding 40% of list price	4½

Electric Cars.

All models	1¼

Commercial Trucks.

Of not less than one ton capacity—	
This and next year models	1½

Cars rented, leased or used for carrying passengers for compensation—charge 1% in addition to above rates. Minimum premium, $5.

AUTOMOBILE LIABILITY RATES.

Automobile liability rates also have been readjusted, effective on and after May 1. The principal change in the new schedule is in the rates for commercial automobiles, which have been advanced 20 to 40 per cent., with a corresponding increase in the cost for property damage coverage. The following table affords a comparison under the various classifications:

	Liability		Property Damage	
	Old	New	Old	New
Class 1	$175	$250	$70	$100
Class 2	150	200	60	80
Class 3	125	150	50	60
Class 4	90	125	36	50
Class 5	70	100	28	40

The new rates on these cars for liability are for public liability only, there being an additional charge of $3.50 and $5 for the employers' liability, whereas the old rates included both hazards. The classifications are as follows:

Class 1—Baggage transfer, electric light companies, express companies, mail wagons, newspaper delivery, police patrol, street railway companies, telephone and telegraph companies.

Class 2—Boiler dealers or makers, invalid carriages, iron and steel, junk dealers, machinery dealers, railway iron.

Class 3—Bottlers, brewers, department stores, dry goods stores, furniture moving, liquor dealers, news companies, oil distributing companies, parcel delivery, parcel post, safe movers and manufacturers, truck men, warehouse and storage automobiles.

Class 4—Barrel and box manufacturers or dealers, building material merchants, carpenters, cleaners and dyers, coal dealers, contractors, feed and grain dealers, furniture dealers, gas and water mains, ice cream dealers, ice dealers, laundries, lumber dealers, masons' materials, mineral water dealers, piano movers and dealers.

Class 5—Vacuum cleaning automobiles—all commercial automobiles not otherwise classified.

FIRES OF THE MONTH.

R. E. Culver, 2818 Frederick avenue, St. Louis, Mo.; garage, $3000.

J. P. McKeague, High River, Alberta, Can.; garage and contents.

Garage Equipment Manufacturing Company, 742 South Pierce street, Milwaukee, Wis.; factory damaged; $5000.

Little Rock Automobile Company, Third street, Little Rock, Ark.; garage, salesrooms, six cars and contents of buildings; $10,000.

Chicago Auto Supply Company, 1355 South Michigan avenue, Newark, N. J.; automobile store damaged; $1000.

Illinois Automobile Company, Galesburg, Ill.; plant and 20 cars; $25,000.

Yancey W. Ralph, 19th and Norris streets, Philadelphia, Penn.; garage, $1000.

Samuel Litchman, 629 High street, Newark, N. J.; garage and contents; $3500.

William Backman, 289 Northampton street, Boston, Mass.; garage and contents; $3000.

National Garage, 417 North Flores street, San Antonio, Tex.; garage.

McZitte's Garage, Niagara Falls, N. Y.; garage and contents; $10,000.

Burns & Church, Main street, Wheeling, W. Va.; garage.

Stice Bros., Williston, N. D.; garage and contents: $10,000.

D. E. McCann's Sons, 63 Preble street, Portland, Me.; carriage factory, garage, repair shop and contents.

Only Garage, Charleston, S. C.; garage and contents.

Alden Spear's Sons Company, Boston, Mass.; garage and contents; $8000.

Pollard Bros., South Pasadena, Cal.; garage and contents.

Valvoline Oil Company, Ltd., Penelton, Penn.; tank and pump station; $4000.

Middleton Garage, Eagle Grove, Ia.; garage and contents; $5000.

Rolfe Garage, Cuyahoga street, Seneca Falls, N. Y.; garage; $3000.

Auto Sales Company, 105 West Brookline street, Boston, Mass.; garage; $3500.

The E. Washington & Lake Avenue Garage, Pasadena, Cal.; garage and contents; $3000.

Joseph F. Hart, 1607 George street, La Crosse, Wis.; garage and contents; $8000.

FOREIGN TRADE OPPORTUNITIES.

(Address Bureau of Foreign and Domestic Commerce, Washington, Giving Number, Which Will Forward Correspondence, Unless Otherwise Stated.)

13,017. Cyclecars—A business firm in a European country informs an American consular officer that it desires to get in touch with American manufacturers of cyclecars. Correspondence should be in Portuguese or French.

12,894. Electric Automobiles—A report from an American consular officer states that a resident of his district has asked for the names of American manufacturers of small electric automobiles of 4-8 horsepower. The inquirer can correspond in English, and states that he will pay cash.

12,897. Automobiles—A company is being incorporated for the purpose of connecting two cities in the West Indies by a daily automobile service. An American consul states that the service is to be started within three months with one 12-passenger car. As soon as the service requires it another will be put on. It has not yet been decided what make of cars to purchase, but the management favors American machines and will be glad to hear from American manufacturers and to receive catalogues, etc.

12,920. Electric Vehicles—An American consul has forwarded a copy of a letter from a business firm in Scotland desirous of obtaining an agency for a good commercial electric vehicle of American manufacture for carrying one to three tons, the usual load being 1.5 tons. The firm states that it has large machinery showrooms and does its own mechanical work; also has an extensive experience with electric motors, having been engaged in electric power installations for the last 14 years. The firm would be willing to take the chassis and build the body and paint same over if necessary.

13,022. Motor Car—A resident of a foreign country informs an American consular officer that he wishes to purchase an automobile suitable for travelling in the interior of a country, where roads are rough and sandy. He would like to receive catalogues and price lists of light American cars, or cars with high wooden (buggy) wheels, such as are manufactured in certain towns in Michigan and other central states.

13,029. Automobiles—A report fronf an American consular officer states that there are at present six or seven automobiles in use in a city of his district. They are of European make and have given only fair satisfaction on account of their weight. The roads are rough in certain sections and the life of tires on this type of car is very short. A light American car would undoubtedly give better results, and as the company is already interested in them it is suggested that American manufacturers offer two or three cars, quoting prices, if possible, c. i. f. city of destination, and explaining the advantages possessed by light cars for such localities. Correspondence should be in Portuguese or Spanish.

It is reported that the Asuncion Chamber of Commerce has petitioned the Paraguayan minister of finance asking for the installation of adequate fire fighting apparatus in the custom houses. Two outbreaks of fire occurred in customs depots in a recent week.

NEW CONNECTICUT AUTOMATIC IGNITER.

THE Connecticut Telephone & Electric Company, Meriden, Conn., well known as maker of electrical equipment, has brought out a new ignition system termed the Connecticut automatic igniter, which presents many interesting, as well as practical, features. As is customary before announcing a new product, the system was subjected to severe road and laboratory tests, all of which demonstrated the efficiency and durability of the apparatus.

The system includes a combined timer and distributor, a step-up coil or transformer, and an automatic switch. The last named is of particular interest in that it automatically cuts off the current in the event the motor is stopped with the circuit closed, preventing exhaustion of the batteries. Tampering with the switch buttons utilized is offset by the automatic feature referred to.

The igniter, which is supplied with either vertical or horizontal terminals, is very compact, and is shown with distributor at Fig. 1. One of the qualities of the design is that it cannot be reassembled other than properly, and the construction is very simple. The drive shaft, which is secured to the motor shaft by the conventional set screw method, has four longitudinal ribs, equidistant, which act as lifters for the breaker lever. The last named is in the form of a semi-circle, and by reference to Fig. 2 it will be seen that the arm is pivotally mounted at one end while the other carries a very large platinum point. The other platinum contact point is a fixed member, and the break is accomplished by a hardened and ground steel roller at the centre of the movable lever. The ribs of the shaft depress the roller and lever, obtaining the interruption of the primary current much in the same manner as in magneto practise. No engine ground is necessary in the primary circuit, as its winding is insulated from the secondary ground in the coil. The advantage is obvious. There is no possibility of the ignition being affected through short circuits in other electrical equipment of the car.

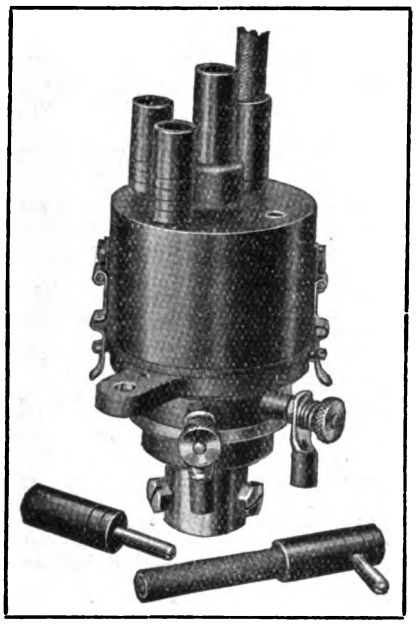

Fig. 1—The Connecticut Igniter Assembled.

A cap or cover is fitted, carrying at its centre a bearing for the extended shaft; a dowel in the timer case, entering a hole in the cover, makes it impossible to replace the cover other than correctly. The operation of the contact points is observable through a mica window. The cover is retained by a split pin above it. A spring washer maintains the proper tension, and an anti-friction washer is utilized between the spring washer and the top of the timer cover.

The distributor consists of a central cylinder of insulating material impervious to heat or moisture, and is carried at the top of the shaft, which is cut away where it enters the rotor and fits into a hole of corresponding shape, thus obtaining a drive. Located in the periphery of the rotor is a radial carbon distributing brush, which is pressed outward by a light spring in a recess in the rotor. Connection or passage of the secondary current is by means of a light, flat steel spring on the top of the rotor. The same insulating material as is used in the rotor is employed for the distributor housing and imbedded in its inner walls are the contacts, the number of which equals the number of cylinders of the motor.

The automatic switch employed is most unique. It is of the flush dash type and its dimensions are standard both as to size and location of screw holes, enabling installation on a dash bored for a standard magneto coil without alterations. The switch carries three buttons, one for the battery and another for the magneto, in case a dual system is utilized, or two sets of batteries. The third button is the releasing member, which automatically throws out any button pushed in, thereby cutting off the current supply. The switch is sturdy and the buttons may be operated by hand or by foot.

The plungers on which the buttons are mounted, operate through holes in a plate inside the cover plate; the perforated plate is pivoted and a spring keeps it normally pressed in one direction. When a switch button is pressed the conically shaped end of its plunger slightly swings the plate, which then snaps into a notch under the cone, holding the button down and keeping the circuit closed. When the releasing button is pressed its cone actuates the plate sufficiently to slip it out of the notch in the switch button that has been in engagement, allowing it to move upward.

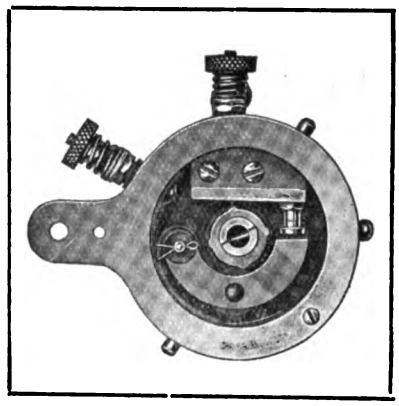

Fig. 2—Dust Cover Removed from Igniter to Show Interrupter Cam and Breaker Lever.

Mounted on the swinging plate is a sliding bar, the end of which reaches the cones of the button plungers. The length of the plate is such that when one button is pressed the cone moves out of the way, that is, towards the cone of the opposite button, and the plunger can be depressed all the way. If, however, both are pressed at the same time, both are blocked by the sliding plate, which is too long to allow both to go down together.

The automatic feature referred to, which throws out the switch disconnecting the battery in the event the operator of the car fails to do so, consists of a vibrator of the electric ball type, the hammer of which strikes the edge of the plate referred to in the description of the switch, pushing it out of the plunger notch. The current operating the vibrator is cut in by a thermostat, a mechanism that has been employed by the company for years, and one which is very practical and efficient. The thermostat, when heated by a continuous and abnormal flow of current, establishes a contact, the vibrator becomes active, operating the switch, cutting off the current supply. Upon the thermostat cooling, which requires but little time, it returns to its normal position. Another purpose of the device is to protect the ignition wiring should an excessive amount of current be introduced in the ignition circuit through trouble in other circuits.

The thermostat may be adjusted, but ordinarily it is so set that sufficient time is provided for the operator to start to crank the engine after the switch connection is established. Another feature of the system is the enclosing of the spark gap which is incorporated in the coil, its function being similar to the safety spark gap employed with magnetos.

The various types manufactured by the company are listed herein. When it is desired to operate a double system, the automatic as one and a magneto as the other, the automatic switch can be arranged to control both. Two high grade annular ball bearings are utilized in the type S igniter employed with the E and G systems, but the type J igniter has self-lubricating bearings. The material employed is formed by mixing graphite and babbitt when the metal is in a molten state. The mixture is subjected to enormous pressure and bushings made of it run without lubrication.

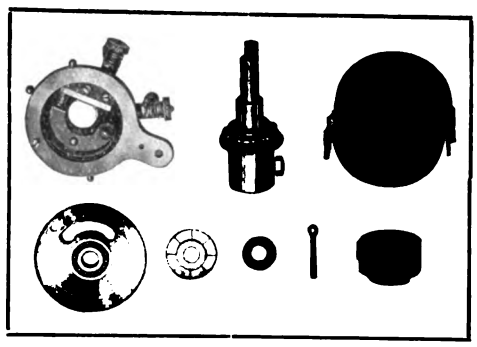

Fig. 3—Showing Igniter Used with E and G Systems Completely Disassembled.

The chief merit of the Connecticut automatic igniter is the elimination of electrical or mechanical lag, important factors in ignition. The break in the primary circuit is in accordance with principles indorsed by sound electrical engineering practise, and laboratory tests have demonstrated that there is no discoverable interval be-

Digitized by Google

tween the interruption of the primary current and the occurrence of the spark at the plug, irrespective of the motor speed.

It is stated that the igniter produces its hottest spark on the slowest motor speeds, and that it increases as the speed decreases, although the spark is much more than ordinarily intense at high speeds. This makes possible easy starting and throttling the motor to very low speeds without sacrificing efficiency, as the propagation is very rapid.

The same high grade material and workmanship for which the products of the concern are noted, are incorporated in the coil, which is wound to carry a voltage in excess of its rating. Insulated terminals are supplied and spring binding posts are utilized, preventing connections from becoming loose. All igniters are constructed for attachment to a .5-inch vertical shaft and retained by set screws. It is stated that the system is not only economical of current, but its installation is easily made. The company issues an interesting booklet containing complete details, as well as illustrations of the new system and prices, which will be mailed upon request.

The systems produced are as follows: Type E, including S igniter and E coil; type G, including S igniter, G coil and G switch; type E J, including J igniter and E coil, and type G J, including J igniter, G coil and G switch.

AUTOMOBILE PATENTS GRANTED RECENTLY.

Folding Top Holder, Harry DeWitt Cox, Richmond, Va.; No. 1,092,898. Filed March 26, 1913.

Mechanical Gearshift, Dean C. Lewis, Reading, Penn.; No. 1,092,922. Filed May 16, 1913.

Tire, Charles H. DeVoll, New York City, assignor, by mesne assignments, to American Spring Tire Company, Dover, Del.; No. 1,092,981. Filed July 31, 1911.

Nut Lock, Otto A. Heckel, St. Louis, Mo.; No. 1,093,050. Filed Feb. 10, 1912.

Rotary Engine, Arthur K. Landsmann and Fritz Dippon, St. Louis, Mo.; No. 1,093,056. Filed Dec. 6, 1910.

Warning Device (Horn), Alpheus C. Lippincott, East Orange, N. J.; No. 1,093,058. Filed March 14, 1913.

Motor Starter, Frank Morgan, Melrose, Mass.; No. 1,093,065. Filed March 29, 1913.

Resilient Wheel, Charles W. Rentz, Diller, Neb.; No. 1,093,077. Filed July 26, 1913.

Resilient Wheel, Robert E. L. Crosby, Jonesboro, Ark.; No. 1,093,115. Filed March 1, 1912.

Lamp, Charles E. Godley, Detroit, Mich., assignor to Edmunds & Jones Manufacturing Company, same city; No. 1,093,122. Filed Sept. 24, 1913.

Spring Wheel, George W. Graves, Mosley McCollman and Alexander P. Gibson, Alderson, W. Va.; No. 1,093,124. Filed March 10, 1913.

Steering Mechanism, Charles Lepley Hays, Eldora, Ia.; No. 1,093,130. Filed Feb. 16, 1912.

Electric Heater, George A. Arnold, Middletown, Conn., assignor to Arnold Electric Company; No. 1,093,237. Filed March 19, 1913.

Bearing, Burton L. Lawton, Meriden, Conn.; No. 1,093,194. Filed Oct. 13, 1913.

Wheel, Lycurgus Anderson, Lake Creek, Tex.; No. 1,096,817. Filed Jan. 26, 1914.

Changeable Tread for Automobiles, Eli O. Anderson, Glenwood, Fla.; No. 1,096,818. Filed Aug. 15, 1913.

Internal Combustion Engine, Gustav A. F. Ahlberg, Racine, Wis.; No. 1,096,819. Filed Jan. 9, 1913.

Valve Mechanism for Air Compressors, Hugh V. Conrad, Pittsburg, Penn., assignor to the Westinghouse Air Brake Company, same city; No. 1,096,828. Filed Dec. 19, 1910.

Tire, George Kelly, Hinsdale, Ill.; No. 1,096,842. Filed June 25, 1912.

Universal Joint Coupling, Allen Loomis, Detroit, Mich., assignor to Packard Motor Car Company, same city; No. 1,096,850. Filed June 29, 1911.

Magneto Ignition Apparatus, John Lewis Milton, Chicago, Ill.; No. 1,096,853. Filed July 15, 1908.

Rotary Engine, Charles A. Rhoades, Pampa, Tex.; No. 1,096,862. Filed July 27, 1912.

Valve Mechanism, Guido Fornaca, Turin, Italy; No. 1,096,900. Filed Dec. 17, 1912.

Motor Fuel Supplying Apparatus, Alfred Freschl and John Lyon Freschl, Chicago, Ill.; No. 1,096,901. Filed April 18, 1912.

Lubrication for Engines, Arthur Constantin Krebs, Paris, France, assignor to Societe Anonyme des Anciens Etablissements Panhard & Lavassor, same city; No. 1,096,924. Filed March 17, 1913.

Spring Suspension, Geoffrey Hamilton Norman, Blackheath, England; No. 1,096,938. Filed Jan. 18, 1913.

Running Gear, Winfield Scott Proskey, Reno, Nev.; No. 1,096,947. Filed Oct. 28, 1909.

Internal Combustion Engine, William John Robb and Walter Henry Welch, Bristol, England, assignors to Banner Motors, Ltd., same city; No. 1,096,952. Filed Oct. 7, 1912.

Pneumatic Spring Wheel, Albert O. Schoelch, Shelbyville, Ind.; No. 1,096,959. Filed Jan. 31, 1914.

Explosive Engine, Frederic S. Thornley, Clarion, Ia.; No. 1,096,968. Filed Sept. 11, 1912.

Muffler, Otto C. Unke and William H. Unke, Milwaukee, Wis.; No. 1,096,970. Filed July 30, 1913.

Carburetor, William A. Bentley, Chicago, Ill.; No. 1,096,989. Filed March 10, 1913.

Internal Combustion Engine, Herbert T. Herr, Denver, Col.; No 1,097,021. Filed May 14, 1908.

Internal Combustion Engine, Delbert E. Lane, Chicago, Ill.; No. 1,097,032. Filed May 7, 1913.

Carburetor, Jesse F. Miller, Albany, N. Y.; No. 1,097,039. Filed Sept. 21, 1911.

Motor Tractor, Henry T. Preble, Berkeley, Cal.; No. 1,097,044. Filed Nov. 13, 1912.

Frictional Shock Absorber, Fridolin Schimmel, Faribault, Minn.; No. 1,097,050. Filed Oct. 30, 1911.

Combined Internal Combustion and Hot Air Engine, William J. Wright, Franklin, Penn., assignor to Wright Engine Company, Pittsburg, Penn.; No. 1,097,068. Filed April 3, 1911.

Clutch Lock, Frank H. Coon, Minneapolis, Minn.; No. 1,097,081. Filed Dec. 19, 1913.

Dirigible Lamp, Sidney Mills Freeborn, San Antonio, Tex.; No. 1,097,087. Filed Aug. 12, 1913.

Spring Wheel, Carl Lauritis Henreck Wraae and James Liddell, Cuba, Wis.; No. 1,097,114. Filed Nov. 1, 1912.

Nut Lock, Charles P. Dyer, Somerville, Mass., assignor to Mariner S. Fickett, Chelsea, Mass.; No. 1,097,121. Filed Sept. 26, 1912.

Rotary Aerial Engine, Louis Vallez, Lille, France; No. 1,097,150. Filed Aug. 9, 1912.

Spray Carburetor, Max Bucherer, Cologne, Germany; No. 1,097,165. Filed July 8, 1913.

Internal Combustion Engine, Fred D. Calkins and Alfred C. Johnson, Sunnyvale, Cal.; No. 1,097,166. Filed Jan. 30, 1913.

Top Frame, James W. Schnabel, Johnstown, Penn., assignor of one-half to Charles F. Schnabel, same city; No. 1,097,192. Filed Oct. 18, 1913.

Shock Absorber, David C. Shaw and James F. McGillivray, South Chicago, Ill.; No. 1,097,194. Filed Jan. 31, 1914.

Gearing, Donald M. Ferguson, Detroit, Mich.; No. 1,097,217. Filed Oct. 18, 1913.

Nut Lock, Frank W. Newton, Danville, O., assignor of one-half to Robert G. Baker and one-fourth to William Wagner, same city; No. 1,097,257. Filed Jan. 2, 1913.

Motor Truck, Francis M. Platt, Stuart, Fla.; No. 1,097,261. Filed Aug. 29, 1913.

Shock Absorber, John Baker, Jr., Los Angeles, Cal., assignor of one-half to Walter P. Shaw, same city; No. 1,097,286. Filed June 12, 1913.

Engine, William S. Harley, Milwaukee, Wis.; No. 1,097,315. Filed July 7, 1913.

Shock Absorber, William O. Olson, Chicago, Ill.; No. 1,097,353. Filed April 14, 1913.

Control Mechanism for Electrics, Frederick G. Peck, Buffalo, N. Y., assignor, by mesne assignments, to Buffalo Electric Vehicle Company, same city; No. 1,097,358. Filed Oct. 16, 1909.

Spring Clip, William H. Smith, Los Angeles, Cal.; No. 1,097,370. Filed April 22, 1913.

Spring Clamp, Charles A. Boreham, Coalinga, Cal.; No. 1,097,386. Filed March 10, 1913.

Jet Carburetor, Peter Donndorf, Stuttgart, Germany, assignor to Daimler-Motoren-Gesellschaft, Unterturkheim, Germany; No. 1,097,401. Filed Feb. 11, 1913.

Motor Starter, Eugene Fuller, Providence, R. I.; No. 1,097,419. Filed Sept. 24, 1910.

Wheel, Frederick Joseph Hadfield, Ringsfield, Beccles, England; No. 1,097,427. Filed Jan. 8, 1914.

Separable Rim, Henry Brinner Keiper, Lancaster, Penn.; No. 1,097,444. Filed Aug. 30, 1913.

Brake, Thomas E. Linfoot, Flint, Mich.; No. 1,097,451. Filed Nov. 24, 1913.

Locking Device for Hood, Albert E. Marshall, Asheville, N. C.; No. 1,097,455. Filed June 17, 1913.

Windshield, Raphael Netter, New York City, assignor to Oliver M. Edwards, Syracuse, N. Y.; No. 1,097,459. Filed March 19, 1909.

Explosive Engine, Leland Scott, St. Joseph, Mo., assignor of one-half to Louis Huggins, same city; No. 1,097,475. Filed Oct. 22, 1912.

Bolt and Nut Lock, David D. Tulloch, Newark, N. J.; No. 1,097,484. Filed Oct. 24, 1913.

Automobile Lock, Francis O. Ulrich, Tamaqua, Penn.; No. 1,097,486. Filed Jan. 6, 1914.

Hinged Seat, Jasper Luther Beeson, Milledgeville, Ga.; No. 1,097,512. Filed Aug. 6, 1912.

Transmission Mechanism, Alen J. Carlton, Fellows, Cal.; No. 1,097,532. Filed July 24, 1913.

Swinging Searchlight, Frank Jackson, Denver, Col.; No. 1,097,588. Filed Aug. 13, 1912.

Tire, Christian Specht, Woodhaven, N. Y.; No. 1,097,596. Filed Aug. 3, 1912.

Windshield, Raymond Magnier, New York City, assignor to Oliver M. Edwards, Syracuse, N. Y.; No. 1,097,603. Filed March 26, 1909.

CONTEMPLATED NEW BUILDING OPERATIONS.

PLANS AND SPECIFICATIONS.

William S. Gray, Greenwich, Conn.; two-story brick garage; chauffeur's and gardener's cottage, 32x100.

E. L. Tustin, Oberbrook, Penn.; two-story garage.

Speck & Sperry, Heed building, Philadelphia, Penn.; 1.5-story garage, 20x24, to be erected at Oak Lane, Penn.

C. E. Schermerhorn, Philadelphia, Penn.; 1.5-story stucco garage, to be erected at Oak Lane, Penn.

Elfreth & Wood, 1708 Sanson street, Philadelphia, Penn.; garage, to be erected at Wilmington, Del., for Archibald du Pont.

Graham Campion, Heed building, Philadelphia, Penn.; one-story brick garage, 45x60, to be erected at 12th and Norris street, for J. Carmichael.

Horace H. Reeves, Jr., 1420 Chestnut street, Philadelphia, Penn.; one-story garage, 23x33, to be erected at 432 West Walnut lane, Germantown.

Charles L. Dewale, Atlantic Highlands, N. J.; two-story garage and living quarters, 26x45, $4000.

Brayley & Knowles, Somerville, Mass.; one-story garage, 61x29, $4000; at Boston, Mass.

C. N. Cohn, Lefferts avenue, Richmond Hills, L. I., N. Y., one-story garage, 40x93, $8000.

A. M. Lowe, 4261 Walnut street, Kansas City, Mo.; two-story garage and flat building, 37x57, $7000.

Charles Baier, Salma, Kan.; one-story garage, 50x100, $5000.

O'Harrow Automobile Company, Charles City, Ia.; one-story garage, 44x132.

G. W. Brett, 111½ State street, Mason City, Ia.; two-story garage and flat building, 26x38.

P. Connell, 514 St. Peter street, St. Paul, Minn.; one-story commercial garage, 60x140.

Pittman, Myers Company, 111 North Capital avenue, Indianapolis, Ind.; one-story garage and shipping room at Zionsville, Ind.; $10,000.

C. A. Genge, 2130 East Washington street, Indianapolis, Ind.; one-story garage, 40x80, $5000.

J. J. Hinaman, North Main street, Marion, O.; two-story garage and flat building, 66x165, $20,000.

A. Hansold, Ben Avon, Penn.; garage, $15,000.

A. D. Nelson, 928 North Fifth street, Reading, Penn.; one-story garage, 16x24, at Wyonnissing, Penn.

C. H. Guelich, Philipsburg, Penn.; one-story garage, 66x115, $12,000.

J. T. Coakly, Weymouth, Mass.; one-story garage, 20x20, $7000.

J. T. Beckett, 70 Bedford street, Fall River, Mass.; one-story garage, 25x37.

Frank Woodward and B. G. Underwood, Deposit, N. Y.; one-story garage, 40x60.

Kerr & Murray, Deposit, N. Y.; one-story garage, 50x80.

Frank J. Rohr, Jay street, Rochester, N. Y.; garage, 30x75, $7000.

William R. Shafer, 672 Central avenue, Albany, N. Y.; one-story garage, 41x60, $4000.

P. A. Grant, 5859 Greenwood avenue, Chicago, Ill.; one-story garage, 44x24.

G. H. Huntoon, Moline, Ill.; two-story garage, 40x60, $18,000.

Henry C. Biddle, Ambler, Penn.; one-story garage, 60x60, $2000.

Mrs. Hannah Frederick, 25 North Ninth street, Reading, Penn.; one-story garage, 13x13.

W. H. K. Herron, 737 Society for Savings Building, Cleveland, O.; one-story garage and store building, 60x80, $5000.

R. H. Harned, 223 West Second street, Davenport, Ia.; one-story garage, 20x40.

B. Mabon, Northfield, Minn.; 1.5-story garages and stables, 60x80.

George C. Call, 334 Davidson building, Sioux City, Ia.; one-story garage; $12,000 to $15,000.

Joseph Baska, 2440 South Harding avenue, Chicago, Ill.; two-story garage and flat, 23x30.

Heywood Bros., and Wakefield Company, 2653 Harvard street, Chicago, Ill.; one-story garage, 50x50.

E. D. Metcalf, 86 South street, Auburn, N. Y.; garage, $2000.

H. J. Heins Company, Boston, Mass.; garage, stable and factory at Cambridge, Mass.

John J. Carlin, 215 St. Paul street, Baltimore, Md.; three garages, each one-story, $7500.

QUALITY

Be a Leader---Have All the Compressed Air You Want

At mighty little expense each day you can have all the compressed air you want—at sufficient pressure. You can boost your business, make real friends of all automobile owners if you have one of the

BRUNNER AIR COMPRESSORS

There's a "Brunner" for the smallest or the largest garage—for ordinary or for peculiar conditions.

A "Brunner" outfit, whether it's a stationary, belt driven compressor, a Motor Driven Portable or a Stationary Automatic Outfit, assures you of service all the time—any time.

The materials are the best, the workmanship scientific—because "Brunner" compressors are not a side line. They're the result of scientific specialization on *one* line—with the garage man's need foremost in view.

Substitutes or imitations are not to be compared with the "Brunner." If you want to be a leader in garage equipment, foremost in the excellence of this part of your garage service, insist on having a "Brunner!"

There is a jobber handling the "Brunner" in your territory —no matter where you are located. Write us for his address.

"Avoid Accident and Stop Those Leaks!"

Don't use a range boiler or steam valve.

Brunner "Airtite" Tanks and Fittings

are made especially for high air pressure and will improve your present equipment.

Dixon's Graphite Transmission and Differential Grease No. 677

This special mixture is the only safe lubricant for the transmissions and differentials of cars and trucks, because it is the only lubricant which actually identifies itself with the metal of the gears. The veneer of pure graphite built up on the metal substitutes anti-friction surfaces of oily graphite for the friction-creating metal surfaces. Wear is minimized, noise eliminated, and long life assured. Study the problem of lubrication and lubricants in "Lubricating the Motor", No. 49.

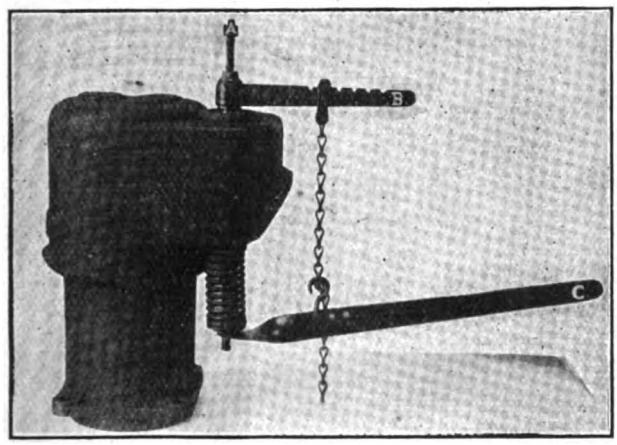
STEVENS MANUFACTURING & SUPPLY CO.
Fisher Building Chicago, Ill.



WINSOR PATENT ADJUSTABLE MOTOR VALVE REMOVER

TO USE: Remove spark plug, insert Barrel A and screw down spindle with fingers, which prevents valve from lifting. Attach adjustable chain to Lever B which revolves around the spindle A. Hook chain to adjustable Lever C. A slight depression, because of the enormous leverage obtained, will compress valve spring, permitting of easy removal of locking mechanism. Note the length of Barrel A and Lever B, accommodating every type of motor.

Made in sizes to fit all spark plug openings. In ordering, state size of spark plug.
LIST PRICE—Enameled black, each $1.50. Nickel plated, each $3.75
Extra barrels, each $1.20.
Dealers, Write Today for discounts. Manufactured by
Winsor Manufacturing Co., 55 Eddy St., Providence R. I.

The final test that decides the sale—the riding quality of the car—is greatly improved with

Coxajusto
ADJUSTABLE TO ANY LOAD

Shock Absorbers. They absolutely absorb the shock. Make automobiling a pleasure, float on Coxajusto. A turn of the cap at the base of the absorber adjusts the tension of the tapered helical spring. A simple twist of the wrist —that's all. It's the adjustment feature that placed the Coxajusto at the top of the heap.

Put a set on your demonstrator. They will help you make sales.
